Milton Eisen, Chief

---

**ACKNOWLEDGMENTS**—Many persons participated in the various activities of the 1972 Census of Manufactures. Primary direction of the program was performed by Shirley Kallek, Associate Director for Economic Fields, and Melvin A. Hendry, Assistant Director for Economic and Agriculture Censuses.

This report was prepared under the direction of Elmer S. Biles, Chief, Industry Division (until February 1975), and Milton Eisen, his successor. Arthur W. Horowitz, assisted by John S. Berube, was responsible for the overall management of the census and was the Industry Division's liaison officer with other divisions.

Program responsibility was shared by the following individuals, who participated importantly in the entire program: Kenneth I. Hansen and Dale W. Gordon, Census Durables; Michael Zampogna, Census Non-durables; Ruth Runyan, Census Subject and Special Reports; Malcolm E. Bernhardt, Current Durables; Robert J. Nealon, Current Non-durables; and John P. McNamee, Minerals. The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowledgment statements in the 81 individually published industry reports.

Edward A. Robinson made significant contributions to the basic economic concepts and content of the census. The mathematical techniques used in editing the data and sampling the respondents were developed by Donald F. Clark. Robert E. Crowther was responsible for the annual survey component of the census of manufactures. Computer programs were prepared under the direction of Howard Hamilton, assisted by Mary H. Johnson.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of Roger Bugenhagen, Chief. Assistance was provided by Samuel Schweid, Andrew Grieco, Charles Venters, Shirley Roberts, Robert Viehman, Jerry McDonald, Joel Richardson, and Sandra Katis.

Forms design was performed in the Administrative Services Division, Henry J. Husmann, Chief. Gladys Potts, Joyce Teague, Helen Hindt, and Margaret Swinton made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of O. Bryant Benton, Chief, who was assisted by Don L. Adams and Robert L. Allen.

The geographic coding procedures were developed in the Geography Division under the direction of Jacob Silver, Chief, assisted by Zigmund Decker, Terence McDowell, Silla Tomasi, Robert Hamill, David Christy, Kurt LeGait, and John Hawkins. Computer processing was directed by James R. Pepal, Chief, Computer Services Division. C. Thomas DiNenna, Jesse Verdeja, and Willie E. Clark provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the subject and industry report series MC72(1)-1 and MC72(2).

The review and issuance of the final industry and State publications were done on a flow basis. Errors were uncovered for a limited number of data cells after the final publications were issued. Because of the expense involved, corrections were made to the previously published data only if they resulted in a revision of 3 percent or more for an individual industry or 1 percent or more for a State. These corrections are included in the final volumes.

All errors identified in any phase of the review were carried to the computer file used to produce the final subject and special reports. Therefore, those reports represent the most accurate data available.

## I. GENERAL BACKGROUND

### 1. THE ECONOMIC CENSUSES

**General.**—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. This program includes censuses of manufactures, retail trade, wholesale trade, selected services industries, mineral industries, construction industries, and transportation. In 1972, these censuses accounted for nearly 77 percent of the \$785 billion of national income originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; electric, gas, and sanitary services; and health and medical services, except for laboratories operating on a profit basis.

**Uses and Users of Census Data.**—The economic censuses are the primary source of facts about the structure and functioning of the economy and therefore provide information essential both for government and business. They furnish an important part of the framework for such composite measures as the national accounts. The census measures also provide weights and serve as benchmarks for current surveys of industrial activity and for indexes of industrial production, productivity, and price, all of which are essential in developing the general background for understanding particular economic situations.

There is widespread use of the economic censuses by manufacturers and distributors who need to establish measures of

their potential markets in terms of areas, kinds of business, and kinds of products; and by managers in various industries and trades who need facts for purposes of economic or sales forecasting, for analysis of sales performance, for the layout of sales territories, for the allocation of advertising budgets, and for the location of plants, warehouses, and stores. For these business purposes, census facts are invaluable. Likewise, trade and professional associations need census information to learn how their industry is changing; chambers of commerce and State and local governments need to understand the business structure and changes occurring in their areas. Business magazines and academic researchers rely on census facts as background for many of their articles.

Following every census, reports are purchased by thousands of business and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press; and census volumes are available in all the major public and college libraries.

**History.**—The first statistical survey which can be called an economic census covered the year 1809, when inquiries on manufacturing were included with the 1810 census of population. Although the results of this pioneer effort were unsatisfactory by modern standards,<sup>1</sup> continued interest in measure-

---

# INTRODUCTION—Continued

ment of the Nation's economic progress led to successive improvements during the 19th century. By 1890, the statistical standards and procedures followed in conducting the censuses were of a fully professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were

collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction; selected service trades were covered beginning with 1933. Dates of these and other economic censuses from 1809 are shown in table A.

**Enterprise Statistics.**—The coordinated collection and tabulation of comparable data for several sectors beginning with 1954 has permitted the Census Bureau to develop its enter-

## INTRODUCTION—Continued

prise statistics program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Also, through the enterprise statistics program, it has become possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

**Legal Provisions.**—Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes

the use of sampling techniques in conducting censuses. As amended in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1977. The pertinent portions of Title 13 are quoted in appendix D.

### 2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

**General.**—In terms of the major industry divisions established in the national accounts, manufacturing is the largest sector of the economy. In 1972, manufacturing plants employed 19 million persons, 22 percent of the civilian labor force of 86.5 million. Over the past 20 years, as shown in table B, national

# INTRODUCTION—Continued

income originating in manufacturing averages almost 30 percent of the total. In 1972, government and government enterprises surpassed wholesale and retail trade which historically was the next largest sector.

**Cyclical Changes.**—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole, as can be seen in the movement from 1929 to 1933 to 1939 in table C.

Within manufacturing, durable goods industries accounted for about 60 percent of all manufactures during recent periods. This category tends to be more volatile than non-durable goods, generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing amounted to only about one-third of the total.

**Geographic Distribution.**—In the early and middle 19th century, manufacturing activity was concentrated in the

## INTRODUCTION—Continued

Northeast. Over the past hundred and twenty years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States. Industry expanded into the North Central Region in the latter part of the 19th century and, in more recent years, displayed a marked growth in the South and West.

**Size Distribution.**—Manufacturing activity tends to be characterized by relative large-scale operations. While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1972 census had less than 10 employees and they accounted for less than 3 percent of the total value added by manufacture.

### 3. ROLE OF THE CENSUS OF MANUFACTURES

In the farm-oriented economy of the early 19th century, industrial statistics played a relatively small role in government policy formation. A few series on physical output of commodities originated either from private sources (flour, iron, and steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). Other than these, the only sources of information on the manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased, and the user finds a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment, payrolls, hours worked, production, prices, inventories, orders, investment in structures, machinery, and equipment, and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and on a timely basis. Sophisticated indicators of economic progress have also been developed such as price and production indexes, gross national product, and national income, published at monthly or quarterly intervals.

In this setting, the census of manufactures still plays an essential role since no other source provides such comprehensive and detailed information on the structure of the industrial sector.

The census obtains, for every manufacturing plant with one employee or more, data on its input of labor, materials, and capital, its output of products and services, its location, and the legal form of organization of the owning firm.<sup>2</sup> These facts are obtained in sufficient detail to permit classification by industry, by size of plant, by homogeneity of output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

<sup>2</sup> For 1967 and 1972, some of this information for 120,000 small companies was not obtained directly but estimated from administrative records. See the discussion of coverage of establishments in sections 4 and 6 below.

**TABLE D. Employment in Manufacturing Establishments, by Region: 1849 to 1972**

Year	United States	Northeast	North Central	South	West
Number of employees (thousands)					
1972 .....	19,029	5,306	6,135	5,221	2,367
1967 .....	18,492	5,573	6,059	4,553	2,305
1963 .....	16,235	5,190	5,239	3,780	2,025
1958 .....	15,423	5,242	5,017	3,382	1,779
1947 .....	14,294	5,429	5,109	2,710	1,054
1939 .....	9,527	3,879	3,184	1,852	612
1929 .....	10,198	4,246	3,516	1,758	675
1899 .....	5,077	2,629	1,474	793	181
1849 .....	957	696	110	146	4
Percent of U.S. total					
1972 .....	100	28	32	27	13
1967 .....	100	30	33	25	12
1963 .....	100	32	32	23	13
1958 .....	100	34	33	22	12
1947 .....	100	38	36	19	7
1939 .....	100	41	34	20	6
1929 .....	100	42	35	17	7
1899 .....	100	52	29	16	4
1849 .....	100	73	12	15	—

Note: Detail may not add to totals because of independent rounding. 1849 data include hand and neighborhood industries, which were excluded from the censuses of manufactures beginning with 1899.

Source: Census of manufactures.

— Represents zero.

**TABLE E. Number of Manufacturing Establishments and Value Added by Manufacture, by Size Class of Establishment: 1972**

(Cumulative percentage)		
Size class	Number of establishments	Value added by manufacture
All establishments, total .....	100.0	100.0
1 to 4 employees .....	35.9	1.1
1 to 9 employees .....	50.8	2.5
1 to 19 employees .....	64.8	5.4
1 to 49 employees .....	77.6	12.6
1 to 99 employees .....	89.0	20.9
1 to 249 employees .....	95.6	36.9
1 to 499 employees .....	98.2	51.4
1 to 999 employees .....	99.3	65.1
1 to 2,499 employees .....	99.8	79.3

General statistics (that is, total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures are published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual-city level provided there are at least 450 employees in manufacturing and the information can be published without compromising the confidentiality of individual company data. Since a significant amount of industry detail cannot be published for the 3,140 counties and county equivalents in the United States, a special computer tape on "Location of Manufacturing Plants" is available for data users. This tape includes the number of establishments in each of the 450 industries by county or county equivalent area, by employment size. Information such as this constitutes a periodic inventory of the geographic dispersion of the Nation's manufacturing economy that provides a benchmark for measuring the change in its structure.

The census of manufactures also provides benchmarks from which more frequent surveys can be developed on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an Annual Survey of Manufactures (ASM) on a sample basis during the intervening years. After each 5-year census, a new sample is drawn utilizing the characteristics recorded for each company in the census. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains less detailed information on products, materials consumption, and equipment.<sup>3</sup>

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other indicators of economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the

input-output studies of the Bureau of Economic Analysis. The information derived from the census of manufactures is also used to develop indexes of industrial production for census years. These indexes are used as benchmarks for the monthly Federal Reserve Board Index of Industrial Production—a key indicator of current economic activity. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Census Bureau, other government agencies, and by manufacturers' associations.

#### 4. INDUSTRY AND PRODUCT CLASSIFICATION

**Structure of the Standard Industrial Classification.**—The basic classification system employed in the economic censuses is the Standard Industrial Classification (SIC). The SIC was developed for use in the classification of establishments (see "Establishment Basis of Reporting," page 9) by type of activity in which engaged. It covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	20-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Public administration	91-97
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

##### Division D.—Manufacturing

Major Group 20	Food and kindred products
Industry group 202	Dairy products
Industry 2023	Condensed and evaporated milk

The SIC is the responsibility of an intragovernmental technical committee headed by the Office of Management and Budget. The system is used by all Federal Government agencies engaged in the classification of establishments. To

<sup>3</sup>Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 450 industries. However, at the State and SMSA levels, statistics are published only for 3-digit and 2-digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,140 counties and equivalent areas. These 300-odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. Data for cities are shown for those cities having over 20,000 manufacturing employees.

facilitate comparison with Federal statistics and the filing of reports, many State and local governments and business concerns organize their own records along SIC lines.

The first SIC manual was issued in 1939. For the manufacturing sector, the nucleus of the manual was the census of manufactures industry classifications developed over a period of many years. A revised manual was issued for the manufacturing industries in 1945 which, with minor modifications, was used in the 1947 census of manufactures. For the 1954 census, the classification structure used in 1947 was again employed, with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and the historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. Minor revisions of the SIC between 1958 and 1967 introduced some 4-digit industry changes but none of them crossed 3-digit group lines. Another extensive revision of the SIC was completed in 1972 which also affected the comparability of industry data. The discussion of the revisions and the impact on comparability appears in appendix B, as well as in parts of each individual industry chapter.

**Structure of the SIC Manufacturing Division.**—For the manufacturing division, the 20 2-digit SIC Major Groups (20 to 39) are subdivided into 143 3-digit SIC Groups (201 to 399) and into 451 4-digit industries (2011 to 3999). While the SIC contains 451 industries, the Bureau of the Census has combined one small industry with another for a total of 450 industries.

Most of the 451 manufacturing industries are defined in terms of specific groups of related products. Usually the products are made of similar materials and by similar processes and are competitive. In determining the boundaries of product-defined industries,<sup>4</sup> it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. (Example: Industry 3361, Aluminum Foundries (castings). A small number of industries are basically defined by material used as well as final product of the plant. (Example: Industry 2521, Wood Office Furniture).

<sup>4</sup> Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (that is, secondary products), and (c) use similar materials or processes. While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; that is, for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries.<sup>5</sup>

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line" of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2- and 3-digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4-digit industries are susceptible to allocation to such categories, while the 2-digit SIC groups are not.

**Subindustries.**—To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4-digit SIC industries into "subindustries." This device is employed where there are wide disparities in the

<sup>5</sup> See "Industry Classification and Sector Measures of Industrial Production" by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and "Historical Comparability of Census of Manufactures Industries, 1929-1958" by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

operating ratios of the plants in the industry because of differences among plants in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 61 manufacturing industries for editing purposes and many were regarded as significant enough to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multioutlet bakeries, and many apparel industries (Group 23) are subclassified into manufactures, contractors, and jobbers.

To provide a further measurement of variations within 4-digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization which is published in table 5A of the industry chapters.

**Definition of Manufacturing.**—As defined in the SIC, manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (for example, baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

**Auxiliary Units.**—In addition to the production of goods and manufacturing services, manufacturing plants engaged in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary

activities associated with the operation of the establishment as a manufacturing entity (for example, management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like). Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for central administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, Form NC-X6, in section 7, below.)

**Marginal Activities.**—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, egg hatching, cotton ginning, and similar activities closely associated with agriculture are excluded.

(b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.

(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.

(d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.

(e) Production of coke for own use by establishments owned by public utility companies.

In the 1972 census, no attempt was made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,<sup>6</sup> ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

<sup>6</sup> Separate data for retail bakeries with baking on the premises were included in the retail census publications, however.

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the 1972 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

**Establishment Basis of Reporting.**—The SIC is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large (for example, with more than 100 employees in each line of activity) and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have

responded favorably, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in company records to provide establishment-type reporting.

SIC industry definition takes account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulp-mills operated in combination with papermills are included in one report.

**Coverage of Establishments.**—The censuses of manufactures for 1947 to date have included establishments with one employee or more. Beginning with the 1967 census, reports were not obtained directly from all such establishments. Approximately 120,000 small single-unit manufacturing firms<sup>7</sup> identified as having less than 10 employees were excused from filing reports. Under special arrangements which safeguarded the confidentiality of both tax and census records, limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Census Bureau for use in the 1967 and 1972 economic censuses. Estimates for data other than payrolls and sales for these small establishments were constructed from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, they account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

In the censuses of 1921 through 1939, establishments with less than \$5,000 value of products were excluded. For 1899 to 1919, the limit was \$500. The change in the minimum size limit to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.<sup>8</sup>

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products and printing and

<sup>7</sup> The characteristics of these firms are discussed below in section 15.

<sup>8</sup> This point is discussed at greater length in the Introduction to the 1947 volumes.

publishing. Tabulation of IRS data for 1972 indicates that there were 104,000 tax returns completed as manufacturing that had no payrolls under SSA standards. These accounted for a little over one-quarter of 1 percent of the total value of shipments for all manufacturing industries.

As indicated above, report forms were not mailed to 120,000 very small establishments. These establishments were assigned the industry classifications to which they had been coded in the 1967<sup>9</sup> Census of Manufactures if they had been in business for that year, or if they had begun in business after 1967 they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the total number of establishments.

**Primary and Secondary Products.**—As applied in the economic censuses, the SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 20 very broad 2-digit groups, 143 3-digit groups, and 451 4-digit industries. In addition, the Census Bureau has developed a product coding system based on the SIC, which contains 1,293 5-digit product classes and approximately 10,500 individual 7-digit products. (See "The Classification of Products and Materials" below.) The 7-digit products and 5-digit product classes are considered the primary products of the industry with the first four digits the same as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, pay-

rolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in tables 5A and 6B of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5B and 5C should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from tables 5B and 5C. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

**Degrees of Integration.**—In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, those establishments may be included which are vertically integrated and those which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

<sup>9</sup> Establishments which were in the 1967 Administrative Record File would have been assigned industry codes from the 1963 Census of Manufactures.

**Industry Code Resistance.**—The production of many establishments is so evenly divided among two or more industry-determining product groups that the predominant groups (which can represent less than half of the total value if there are three or more groups) change from year to year. In the ASM, these plants are prevented from shifting back and forth among industries due to minor shifts in product mix, by the application of a “resistance formula” in assigning industry classifications.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures and again applied in the 1967 census. In the 1972 census, the formula was applied only to establishments included in the 1971 ASM sample panel with certainty (that is, included with a probability of “1”). In general, certainty cases included all establishments of companies with at least one manufacturing plant with 250 employees or more.

The formula gives approximately equal weight to the need for maintaining continuity in the establishment composition of an industry, thus improving the measurement of change and the need for reflecting the industry’s exact status at a point in time.

In the 1972 census, the industry classification of certainty establishments was allowed to change from that assigned in 1971 under one of the following conditions:

- (a) The value of the 1972 primary products constituted 60 percent or more of its total value of product shipments, or
- (b) The value of the 1972 primary products, while less than 60 percent, was at least twice the value of products which had been primary in 1971.
- (c) The value of 1972 primary products, while not meeting either of the two prior conditions, exceeded the value of the 1970 primary industry’s products in both 1972 and 1971 by at least 20 percent.

**The Classification of Products and Materials.**—In census industrial statistics, a commodity classification system based on the SIC is employed. The code numbers used in this system relate the commodity to the industry in which it is produced. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the “product class” canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The system is also applied to the coding of materials insofar as the first four digits are concerned; for example, the code number 024111 refers to whole milk used as a material, and the first four digits of this code number 0241, refer to the agricultural industry, dairy farms, where this product originates.

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women’s sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women’s sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Census Bureau’s entire industrial statistics program, including monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.<sup>10</sup>

## 5. GEOGRAPHIC CLASSIFICATION

**Census Divisions and Regions.**—In order to present census data at a level intermediate between the U.S. total and those for the individual 50 States and the District of Columbia, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 census, the nine divisions were also classified into four geographic regions: Northeast, South, North Central, and West.

Not only are these groupings convenient for the summary presentation of census data below the U.S. level, but they are also essential to presenting a maximum of geographic information where the individual State data cannot be shown without disclosing figures for individual companies. (See section 22, “Confidentiality”.) The relative importance of manufacturing among the regions, divisions, and States is shown in table F.

**Standard Metropolitan Statistical Areas.**—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 263 standard metropolitan statistical areas (SMSA).<sup>11</sup> In the 1972 tables, detail for 2-, 3-, and 4-digit industries is shown for any SMSA when it would not disclose data for individual companies and the industry had at least 250 manufacturing employees. This is the same procedure as that used in the 1967 census. Prior to 1967, detail had not been shown for SMSA’s with under 40,000 total manufacturing employment, and only industry group figures were

<sup>10</sup>Schedule B is the U.S. export classification while TSUSA is applied to imports.

<sup>11</sup>See appendix F for a description of each SMSA.

shown for SMSA's with 40,000 to 190,000 employees. Between 1967 and 1972, a significant number of SMSA's were redefined in content or became new SMSA's. These changes are discussed in appendix E.

Standard metropolitan statistical areas are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of the area. Each area (except in New England) consists of one whole county or more. An area may contain not only highly industrialized

counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining standard metropolitan statistical areas, but on a city and town basis because towns are regarded as the significant unit in this region of the country.

Note: The Flint, Mich., SMSA falls within the top 50 SMSA's but is excluded from this table to avoid disclosing figures for individual companies.

— Represents zero. \*The definition of this SMSA changed for 1972. See appendix F for a description of each SMSA and changes in content.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined

would be limited by the fact that many types of economic and social data are available only on a county basis.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Value added by manufacture in all SMSA's accounted for 78 percent of the U.S. total in 1972. The relative importance

of the 50 largest SMSA's in 1972 and their rankings in the 1967 and 1963 censuses are shown in table G.

**Industrial Counties.**—In addition to industry statistics for standard metropolitan statistical areas, table 7 of each State report, presents data by county for each industry group (2- and 3-digit) that had at least 450 manufacturing employees

and where it would not result in disclosure of figures reported by individual companies.

**Cities with 450 Manufacturing Employees or More.**—Summary totals and industry detail at the 2-digit level are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

## II. METHODS

### 6. PLANNING AND PREPARATION

**General.**—The Census Bureau has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations is solicited in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, studies of the problems encountered in the previous censuses are undertaken, and proposals to improve the methods of collection, processing, and tabulation are explored.

**Mailing Lists.**—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from Internal Revenue Service (IRS) and Social Security Administration (SSA) records.<sup>1 2</sup> These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, it was decided to investigate the feasibility of making greater use of the data in the IRS-SSA records. This effort led, in the 1967 censuses, to the exemption of over 2,000,000 firms from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. Well in advance of the data collection phase of the censuses, plans for using these records for small employers were developed in close cooperation with those agencies. Specific procedures for this use and for assuring confidential treatment of individual tax returns were set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The basic records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The information obtained from these reports was the name and address, payrolls, and gross business receipts. In addition, an SIC indus-

trial activity code was assigned by use of the permanent SSA records which indicate the industry or kind of business of each employer. Other census statistics for these small firms were imputed, using industry average ratios to payrolls and sales.<sup>1 3</sup>

Since the 1967 procedure was successful, it was repeated in the 1972 economic censuses. In 1972, there was a concerted effort by the Census Bureau to improve the industry coding of the administrative record by mailing a nature-of-business inquiry to establishments whose industry codes could have been affected by the 1972 revision to the SIC. (A sample classification card is reproduced in appendix C.)

**Planning the Content of Questionnaires.**—As in previous censuses, the content of the 1972 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the basic data and those who use the resulting statistics. Those consulted included government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all national manufacturers' associations covering specific industries.

A special effort was made to obtain the advice of individual manufacturers and their trade associations as to the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1972 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These inquiries followed the pattern of the 1967 census inquiries, with the introduction of new product detail reflecting suggestions received by the Census Bureau after the 1967 canvass. Small items (those valued at \$5 million or less) were not retained in the list unless they were needed to simplify the classification of other products or were of strategic importance. The manufacturers and others consulted in this clearance procedure were requested to comment particularly as to whether

<sup>1 2</sup> The 1947 Census of Manufactures list was also obtained from the SSA.

<sup>1 3</sup> As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

the proposed detail was readily reportable from business records, and whether it represented the most appropriate set of items for the industry. A restriction was placed on proposals for additional detail; it was stipulated that the 1972 value of any new product category should exceed \$20 million.

The thousands of comments and suggestions received in this clearance procedure were analyzed by the census staff. Finally, a detailed account of the review procedure and the decisions reached was forwarded to the Office of Statistical Standards, Office of Management and Budget, along with the Census Bureau's recommendations for the content of the product sections.

The final review of the content was performed by the Office of Statistical Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives representing a cross section of industries and various professions within companies such as controllers, economists, and market research directors.

## 7. REPORTING FORMS

A representative selection of the reporting forms used in the census is reproduced in appendix C. The uses of each of them are discussed below.

**General Forms.**—This group of forms was used in the economic censuses generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

**NC-X1A, Report of Company Organization.**—This companywide report and its companion forms NC-X1B and NC-X1C were used in the prec canvass of multiunit companies conducted in 1972. A more detailed account of their use is given in section 8, "The Mailing Lists."

**NC-X2, Listing of Additional Establishments.**—This form was mailed to all multiestablishment companies together with the 1972 Census of Manufactures forms to obtain a list of establishments that were acquired after the NC-X1A was filed. These plants were then classified, added to form NC-X1A, and mailed report forms. Plants under construction were requested to report expenditures put in place during 1972 and the total gross book value of assets at the end of the year.

**NC-X3, General Schedule.**—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.<sup>14</sup>

**NC-X6, Central Administrative Offices or Auxiliary Establishments.**—Many multiunit companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. These establishments were asked to complete form NC-X6. The form contained questions on approximate employment for such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments.

**NC-K1, Company Summary Report.**—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, along with the appropriate questionnaires for its establishments. The NC-K1 requested consolidated company totals for key data items, such as receipts, new capital expenditures, inventories, and fixed assets. In addition, each company was asked to distribute the 1972 employment reported on its establishment questionnaires by its IRS-SSA employer identification numbers (EI numbers) and to compare these totals to the figures reported on its Treasury Form 941 tax returns. This comparison provided assurance that all domestic establishments of each large multiunit firm and its subsidiaries would be included in the censuses. Form NC-K1 served this operational purpose and also provided essential data for the enterprise statistics program described above in section 1.

**Census of Manufactures Forms.**—The questionnaire reproduced in the appendix, form MC-36B, is typical of the 180 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. For establishments included in the Annual Survey of Manufactures sample, form MA-100 was substituted for the front sheet of form MC-36B and its companion forms, since the content was virtually the same and it was desired to maintain continuity of reporting in the ASM. Whether or not form MA-100 was used, the inquiries on the 180 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

**Annual Survey of Manufactures Forms.**—Form MA-100 is the establishment report used in the ASM since 1949 (with modifications). As mentioned above, this form was used in 1972 as the first sheet of the census of manufactures report for the establishments included in the ASM sample. The establishment's 1971 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 9, "Quantity and value of products shipped and other receipts," on form MA-100 corresponds to item 18 on the census form MC-36B and its companion forms,

<sup>14</sup> The use of Form NC-X3 is also discussed in section 8, "The Mailing Lists."

the difference being that item 18 called for more detailed information on product shipments.

**Other Related Forms.**—Form CB-51J, "Manufacturers' Sales Branches and Sales Offices," which is reproduced in appendix C, is typical of the several forms used for these establishments in the census of business. The forms differed only in the kinds of products sold as listed in item 12. In item 5, line b provided verification of the classification of the establishment as a sales branch or sales office. If the line-b percentage indicated that more than half of the goods sold were not manufactured by the parent company, the establishment was reclassified into one of the merchant wholesaler categories.

**MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions.**—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, man-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data were requested. The data are presented in a special report included in Volume I and are not included in the totals for operating manufacturing establishments.

## 8. THE MAILING LISTS

**General.**—As discussed in section 6 above, the basic lists for 1972 were obtained from IRS-SSA records, supplemented importantly by the inclusion of the ASM list of 68,000 establishments. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,<sup>15</sup> it was necessary to follow separate procedures for multiunit companies (those operating at more than one location).

**The Precanvass.**—Multiunit companies were required to file at least one establishment report<sup>16</sup> covering each location. In order to select the appropriate questionnaires, it was necessary

to determine in advance the nature of operations at each location. Beginning early in 1972, therefore, a "Report of Company Organization" (forms NC-X1A, NC-X1B, and NC-X1C)<sup>17</sup> was obtained from firms known to be multiunits from previous census records. Form NC-X1A was mailed to all of the larger multiunit companies. Form NC-X1B was mailed to multiunit companies operating under 4 or less employer-identification numbers and having 13 or less operating establishments. Form NC-X1C was mailed to multiunit companies which were operating under one employer-identification number, having 4 or less operating establishments and a total employment of 100 or less.

All of these forms consisted essentially of a report on company affiliation and a list of the domestic establishments operated by the company. Before the forms were mailed, the company's establishments as identified in census records were prelisted. In the instructions for form NC-X1A, the respondents were asked to make any necessary corrections to this list. In addition, they were asked to supply descriptions of any new establishments not already listed, including their approximate size.

Large multiunit companies were segregated for special handling in the prec canvass because problems involving overlap and duplication were anticipated. Many of these companies were active in retail and wholesale trade as well as in manufacturing. The instructions for the prec canvass were reviewed with these firms in personal discussions with officials of their accounting departments, in order to make certain that the procedure was understood and the establishments properly described on form NC-X1A.

**Initial Control File.**—This file, consisting of about 10 million names and addresses of companies, was assembled from IRS-SSA records and other sources including the 1972 economic census records. For manufacturing, the ASM records were incorporated in the file.

**Single-Unit Companies.**—The mailing lists for single-unit companies (those operating at only one location) were developed from the initial control file by removing out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the prec canvass. A special survey of out-of-scope companies with more than 50 employees in selected industries was conducted to doublecheck their eligibility, and some names were added to the mailing list as a result. Single units with over 150 employees were mailed form NC-X1B to determine if they were multiunits.

The final step was to set aside the records of the small companies for which census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

<sup>17</sup> These forms are reproduced in appendix C.

<sup>15</sup> The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Census Bureau concept of a company differs from the IRS-SSA definition, since the Census company includes all establishments under common ownership or control; in the IRS-SSA records, subsidiary corporations are often treated as independent companies.

<sup>16</sup> If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4, above.)

Classification cards (a sample form is reproduced in appendix C) were mailed to the administrative record cases if their historical code was involved in the 1972 SIC revision. Each establishment was requested to describe on the questionnaire the products manufactured or activity performed at their plant, the establishment was then classified according the response received. If a response was not received, the establishment was reclassified to the most probable industry.

**General Schedule.**—While the lists assembled in these ways were generally adequate in providing sufficient industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, "General Schedule," which is reproduced in appendix C, was mailed to all such companies. Since it was assumed that these companies were quite small, only a few key figures were requested. On the basis of the information reported, these reports were coded and included in the basic tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

## 9. GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by standard metropolitan statistical areas, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address, city, town or village, county, and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

The geographic coding system used in the 1972 economic censuses was based on the 1967 system with some improvements and revisions. The major changes included updating and

expanding the address reference file and the use of new techniques in coding and unscrambling addresses against the reference file.

## 10. DATA COLLECTION

**General.**—Although the greater use of administrative records in 1972 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 192,000 manufacturers. The assembly of several hundred different questionnaires into mailing packages, correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

**Instructions.**—Several general instruction booklets were prepared to assist respondents in completing questionnaires for the 1972 economic censuses. In addition, separate detailed instruction manuals were printed for establishments in a few kinds of business and in certain mineral industries with peculiar reporting problems, as well as for manufacturing establishments reporting on the detailed standard forms.

**Timing.**—The bulk of the 1972 questionnaires was mailed by mid-January 1973 with a due date of February 15, about 2 months earlier than the corresponding due date for the 1967 censuses. The collection phase was completed in late July 1973, which was about 3 months earlier than the 1967 census.

**Followup.**—Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. A reminder card was used for the first followup, and form letters were used in the four subsequent mailings. Two basic letter formats were used: one for multiunit companies that had returned questionnaires for some but not all establishments and the other for companies that had not responded at all.

In addition to the letters for the 3d, 4th and 5th followups, analysts made telephone calls to the large companies to help with reporting problems and to request that the forms be completed and returned.

The last followup letter was mailed in June 1973. Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in July 1973. Thus, all companies and establishments included in the original mailing list (except those determined to be inactive during 1972) were represented in the final statistical results, either by actual returns or by proxy returns generated from administrative records. A special effort was made to obtain actual returns from all large firms, so that the volume of business represented by proxy returns was relatively very small.

## 11. DATA PROCESSING

**General.**—The editing,<sup>18</sup> coding, and tabulation of data for the five million establishments represented in the 1972 economic censuses was a complicated task requiring extensive advance planning and careful coordination among the Census Bureau's organization subdivisions. Automatic data processing and other advanced techniques were used in all phases to a considerable extent.

**Facilities.**—In the mail collection phase, the questionnaires were returned by respondents to the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The Jeffersonville functions consisted mainly of preliminary screening of questionnaires, carrying on routine correspondence with respondents, keying data on a key-to-disk system, and transmitting the tape encoded data to Washington on a high-speed transmission system. The Washington staff handled computer operations and all operations in connection with the use of IRS and SSA records.

**Preliminary Screening.**—After they were checked in against control lists and assigned geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. In the case of multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals reported on form NC-K1, "Company Summary Report." Questionnaires received from ostensibly single-unit firms were reviewed to ascertain whether they had become multiunits through merger or acquisition. All questionnaires were reviewed to see that the entries were legible and keyable and that entries appeared for a number of key items. For manufacturing establishments returns, the key items were payrolls and value of shipments. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems involving multiunit companies were either handled by a special task force of experienced analysts in Jeffersonville or were referred to the Washington office.

**Computer Editing.**—All of the establishment records from the 1972 censuses of manufactures and mineral industries underwent computerized processes of screening and detailed testing of data. While many of these programs were newly devised in 1972 they were largely based on similar programs in use during previous censuses. Average values and tolerance limits for key

operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per man-hour, etc.) played a fundamental role in the editing process. However, more extensive testing and more sophisticated routines for adjusting data which failed the tests were incorporated into the 1972 programs. The need for computer editing may be judged by the fact that more than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of application of these programs.

In the 1972 census of manufactures, nearly 386,000 establishments were initially defined as being potentially in scope of manufacturing establishments. Approximately 55,000 were identified as having no activity in 1972 or actually out of scope of manufacturing. There were approximately 18,000 duplicate establishment records, which were removed. The ending file consisted of nearly 313,000 establishments engaged in manufacturing activities.

In sequence, the computer programs used included a Housekeeping and Screening Edit, a Coverage Control and Matching Edit, a Magnitude Edit, a General Statistics Edit, an Intercard-Intercolumn Edit, a Product and Materials Edit, Duplicate Removal Programs, and various programs of referral and of aggregate testing. These programs are described in outline form below. Also included within this sequence were programs of geographic coding and of industry coding, subindustry coding, and SIC recoding which are described elsewhere in this Introduction.

The *Housekeeping and Screening Edit* was designed to inspect each record for the presence of basic information such as identification numbers, geographic codes, and source codes (that is, ASM, census of manufactures, or census of minerals). This program also included some simple data adjustments, such as the replacement of a missing total by a corresponding sum of detail.

The *Coverage Control and Matching Edit* was a system of programs which checked the consistency of clerically assigned codes with information reported on the ownership status of the establishment. For ASM establishments, the program included matching with the 1971 ASM record file to identify corresponding prior-year records.

The *Magnitude Edit* was designed to test the size of two key items—payrolls and value of shipments. For ASM establishments, these items were compared with the corresponding entries for 1971 and were accepted if satisfactory. If not accepted, the ASM records were channeled through the standard edit which compared payrolls to a historical employment-size code. Payroll figures passing the test were then used, in conjunction with cost of materials, in testing the value of shipments.

When failures in the magnitude tests were encountered, a fixed sequence of attempts to adjust the data were performed,

<sup>18</sup>In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

which included dividing a reported figure by 1,000 (a common error was the reporting of values in dollars rather than in thousands of dollars as requested), or replacing a total by a sum of detail where these differed.

More than 34,000 establishments were rejected from the combined output of the Housekeeping and Screening Edit, from the Coverage Control and Matching Edit, and from the Magnitude Edit. These rejects were clerically reviewed, corrected where necessary, and recycled back into the computer.

The *General Statistics Edit* tested key operating ratios and adjusted the record or flagged it for later attention if it failed the test. Fifty-two such ratios were assigned for use in testing census of manufactures records, and 41 ratios of change between 1971 and 1972 were used in testing the ASM reports. The tolerance limits and average values for these 93 ratios were based on the limits used for the corresponding tests in the 1967 census, with some correction and updating based on the 1971 ASM information.

In the presence of ratio failures, the computer program was designed to determine the component of the ratio which was most likely to have caused the failure. This was done by a process of inspecting other ratios containing each of the suspect components, and by computing an overall weighted-reliability index for each. The component with the lowest reliability index was judged to be incorrect. The computer then attempted to adjust the questionable figure by a process of "rounding" (multiplying or dividing by successive powers of 10), substitution of a total by a sum of detail, or by imputation based on one of the several ratios in which the suspect component was contained. After each such attempted adjustment, the new figure was accepted if it resulted in an improved reliability index.

In addition to the testing and correction of reported information, the General Statistics Edit was the vehicle for the imputation of data for the 120,000 establishments designated as administrative-record cases, as well as data for companies whose reports were not received at the time the data were tabulated. Imputation for all reasons, failure to report as well as administrative records, accounted overall for about 5 percent of the total value of shipments. Records were not rejected and removed from the computer tapes in the General Statistics Edit, but were flagged and printed out for review by an analyst whenever the computer made a large adjustment, found a large year-to-year change, or could not make an acceptable adjustment after test failure. Excluding administrative records, about 22,000 such cases were printed out for review and possible correction.

The *Inter-card-Inter-column Edit* was designed to test specific relationships among products, materials, and special inquiries. The record was flagged for inspection if the test failed; some 11,000 records were printed out for review from this edit.

The *SIC recoding program* recoded industry codes, product codes, and material codes, which were reported on the 1967 SIC system by means of reference tapes to the 1972 SIC system. Each establishment was assigned an old (1967) SIC industry code and a new (1972) SIC industry code based on the product mix reported in item 18 of the report forms. These industry codes were retained in the establishment record in order to tabulate and bridge the information. (See appendix B for a comparison of the old and new SIC's).

The *Product and Materials Edit* was performed after the data on products and materials had been extracted from the basic establishment records, assembled in product (or material) sequence, and recoded to the 1972 SIC code system. The edit was designed to inspect the reported quantities of production and of consumption after the corresponding values were tested and found acceptable. Unit values, in terms of dollar value per unit of quantity, were computed and ranked from highest to lowest. The most extreme values were removed, and the truncated data were used in the formulation of parameters (average deviation, central value, and upper and lower tolerance limits) which were printed out for review by analysts. This routine differs from those in other edits in that the parameters for editing were developed from the data at hand rather than from historic data or predetermined reasonableness limits.

The *Duplicate Removal Programs* were designed to identify and eliminate duplicate establishment records from the census. The sources of duplication were many; imputed records which were followed by late receipts of a report from the respondent were typical; multiunit companies having plants duplicated on their list of establishments; receiving or imputing full-year plant reports from the selling (predecessor) and acquiring (successor) companies; companies being imputed as single units which had reported as multiunits. A potential duplicate program was used to identify, for analysts' inspection, establishments which were in the same industry, same area, and approximately the same size. These programs resulted in the elimination of nearly 18,000 duplicate establishment records from the census file.

As in previous censuses, this preliminary round of computer editing and professional correction was followed by a more detailed review of establishment records. Among the devices used at this stage was an "outlier" program which printed out ASM establishment reports of dubious quality in terms of their internal consistency. The outlier program used some of the same ratios as the General Statistics Edit, but with parameters updated to reflect the characteristics of 1972, rather than earlier data. Records with one or more suspicious ratios were printed out for review. In addition, aggregates of records at the industry and the geographic cell level were inspected with ratio tolerance limits adjusted to reflect the number of establishments contributing to the cell.

## 12. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The prec canvass and other special procedures for multiunit companies described in section 8, "The Mailing Lists," and section 10, "Data Collection," were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiunit companies, were also used to verify the completeness of establishment coverage. This procedure is discussed in section 11, "Data Processing."

Comparison of statistics tabulated from the census of manufactures with the Census Bureau's Current Industrial Reports series, or with data originating with other agencies was possible

in many instances, thus providing a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the Internal Revenue Service, the Fish and Wildlife Service, and the Department of Agriculture. In the industry reports in Volume II, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Census Bureau's other procedures designed to improve the accuracy of the census data are discussed above in the sections on data collection and processing. Comments on the valuation of intracompany shipments by multiunit companies are included in section 15.

## III. COMMENTS ON STATISTICAL MEASURES AND TABLES

*(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following sections, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)*

### 13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARY ESTABLISHMENTS

In the industry chapters of Volume II, the data on employment and payrolls refer to operating manufacturing establishments and are so described. In the summary tables and the area reports, the employment and payrolls of central administrative offices and auxiliary establishments are included as well. However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the General Summary tables. The relative importance of administrative offices and auxiliaries has increased substantially in recent years, because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing,

repair services, and miscellaneous others. As indicated in table H, this tendency was quite marked between 1954 and 1963 and between 1967 and 1972.

TABLE H. Employment in Central Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1972 and Earlier Census Years

Census year	Employees in operating manufacturing establishments		Employees in central administrative offices and auxiliaries		
	Thous-ands of em- ployees	Percent change from previous census year	Thous-ands of em- ployees	Percent change from previous census year	Percent of total employ-ment <sup>1</sup>
1972 . . . . .	19,029	+2.9	994	+19.8	5.2
1967 . . . . .	18,492	+14.0	830	+14.3	4.3
1963 . . . . .	16,235	+5.3	726	+20.6	4.3
1958 . . . . .	15,423	-1.4	602	<sup>2</sup> +32.9	3.8
1954 . . . . .	15,645	(NA)	453	(NA)	2.8

(NA) Not available.

<sup>1</sup>The total includes manufacturing establishments, central administrative offices, and auxiliaries.

<sup>2</sup>The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

Source: Census of manufactures.

## 14. MATERIALS

In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected for approximately a thousand specific materials. About 350 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Detailed consumption information was collected in the standard materials inquiry, in the product inquiries (for items which were produced and consumed in the same plant), or in a few instances in special inquiries. The resulting statistics are presented mainly in tables 6A and 7A of the industry chapters, Volume II.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

- (a) The importance of the material as measured by the total value of U.S. consumption of the material;
- (b) The percentage of total consumption accounted for by manufacturing establishments;
- (c) The availability of consumption information from manufacturers' records, and
- (d) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited-coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7A in the industry chapters of Volume II, the following limitations should be noted:

- (a) Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7A represent consumption in secondary products as well as primary products of the industry represented. The extent of secondary production is measured by the specialization and coverage ratios shown in table 5B of the industry chapters.
- (b) Attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and

supplies, not specified by kind." The amounts appearing on these lines represent imputed totals for establishments whose statistics were developed by use of administrative records, and totals for other establishments which failed to report their consumption in specific terms. Thus, for most industries, the specific categories are understated. A judgment on the statistical significance of the understatement for each industry may be made on the basis of the relationship of the value shown for the "not specified by kind" (code 000) line compared with the total of materials, components, parts, containers, and supplies for the industry.

(c) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was \$5,000. The use of this cutoff is not believed to have had a significant effect on the totals.

(d) A total of "not elsewhere classified" (n.e.c.) material code 970099 was collected on most forms and is published for each industry. This represents the total cost of materials for an industry for which no material items were prelisted on the form. Survey MA-131, 1972 Supplemental Survey of Materials Consumed, a sample survey of 141 industries, was conducted in 1972 to provide material consumption estimates for the cost of materials reported in material code 970099. Results of this survey are shown in chapter 5, Materials Consumed.

## 15. VALUE OF SHIPMENTS BY MULTIUNIT COMPANIES

**General.**—Except for a few industries as indicated in appendix A, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value, including not only the cost of production but also a reasonable proportion of company overhead and profits. Since there is no advertising or other selling cost involved, it would be expected that the value per unit of such transfers would be less than that for commercial sales. The plant receiving the transferred goods was instructed to include them in its cost of materials, valued as at the shipping point plus the cost of freight and other handling charges.

In the case of goods transferred to sales branches, or sold through separate sales offices, the implication of the "f.o.b. plant" instruction is that the value is at a somewhat lower level than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

In practice, there is reason to believe that these instructions were not followed by all companies. In a recordkeeping practices study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. In the case of finished products transferred to separate selling organizations, half of the companies interviewed valued the products at their final or invoice price, which again would be somewhat higher than the "f.o.b. plant" transfer value requested. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. For products characterized by a substantial amount of interplant shipments, separate quantity and value figures were requested on the census forms. Data on these shipments, the unit value of which is less accurate than the unit value for shipments outside the company, are presented separately in table 6A in the industry chapters of Volume II.

**Individual Products.**—In the 1972 census program, information was collected on the output of approximately 10,500 individual product items.<sup>20</sup> The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases, it may be much more detailed, and in other cases, it is more aggregative. For example, pharmaceutical preparations were reported in terms of 160 products, while canned meats was a single product. Frequently, large aggregative values at the product level indicated that detailed production figures were available from other government sources or reliable private surveys.

Some 5,500 of the product items were listed separately on the 1972 census report forms. Data for the remaining 5,000 products were obtained in the monthly, quarterly, or annual commodity surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1972 for these items as derived from the commodity surveys are shown in the "product shipped" table (table 6A) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected. For products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total quantities produced and often the quantities con-

sumed within the plant were collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

**Classes of Products.**—For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry (see section 4 for application of coding structure to the assignment of SIC codes for establishments).

The 10,500 product items in the 1972 census (including products from the Current Industrial Reports program) were grouped into approximately 1,293 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6B provides information on the value of shipments of product classes by State; and table 5C, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments. In table 5A the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

<sup>20</sup> See 1972 Census of Manufactures, MC72-1.2 "Numerical List of Manufactured Products," and MC72-1.1 "Alphabetic List of Manufactured Products," (1967 SIC basis).

# INTRODUCTION—Continued

**Effect of Use of Administrative Records on Product Data.**—As noted elsewhere in this Introduction, 1972 census statistics for about 120,000 small manufacturers were developed by use of IRS and SSA records. Since the SSA records were coded only to the 4-digit SIC level, it was not considered feasible to estimate the product output of these small companies in terms of specific 5-digit product classes or 7-digit products. The total value of output was therefore coded to the 4-digit level and published separately in table 6A of the industry chapters of Volume II. In table I, page 18, these data have been summarized together with other undistributed 4-digit totals reported

by the larger companies. It will be seen from table I that the contribution of the small companies (administrative records) to product totals was of little importance except in lumber, furniture, and printing and publishing (groups 24, 25 and 27). The large companies (mailed establishments) which for various reasons reported only in terms of group totals were of somewhat more importance, accounting overall for about 3 percent of the total value of product shipments.

Nominally, the shipments of "small companies" as shown in table I represent the output of all establishments with less than 10 employees. Actually, only 35 percent of the value of

Note: These values represent product shipments, irrespective of the industry in which the products were made, and therefore differ from the industry group totals shown in the General Summary tables.

<sup>1</sup> The product shipment data for 1972 are tabulated on the 1972 (new) SIC basis; therefore data for 1972 and 1967 are not completely comparable for most of the major 2-digit groups due to the reclassification of products in the 1972 SIC revision across 2-digit groups. See appendix B for the products of 4-digit industries that were reclassified across 2-digit major groups.

<sup>2</sup> Estimates derived from administrative records. See text for further discussion.

<sup>3</sup> In the 1972 SIC revision, the products for Major Group 19 were reclassified to Major Groups 34, 36, 37, and 38.

shipments of establishments with less than 10 employees was obtained from administrative records. This was due to several factors, the most important of which were—

(a) Many of the establishments with less than 10 employees were owned by multiunit companies and were covered in the mail canvass.

(b) Questionnaires were mailed to about 4,000 of the companies identified as having less than 10 employees. These were the small companies included in the ASM sample; the rest were included in the mail canvass to improve the estimates of general statistics, products, and materials.

(c) Some companies identified originally as having 10 employees or more turned out to have less than 10 employees in 1972.

Another factor tended to reduce the value of products not specified by kind attributed to small companies, thus affecting table 1 particularly. This was the fact that some 4-digit industries were represented by only one product category (an example is industry 3273, Ready-Mixed Concrete). Administrative-record estimates for products such as this were treated as specific information and not tabulated under the "not specified by kind" heading.

These factors taken together explain why the value of products "not specified by kind" attributed to small companies in table 1 is only 1.5 percent of the total, while the 159,000 establishments with less than 10 employees account for 2.5 percent of the total value added by manufacture in table E.

The value of product shipments accounted for by the small companies increased from 1.0 percent in the 1967 census to 1.5 percent in 1972. This is because considerably more establishments, initially identified as having less than 10 employees, actually had more than 10 employees in 1972.

The data for many of the specific 7-digit products shown in table 6A are understated by a proportion of the "not specified by kind" codes in each industry.

## 16. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregates of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries include large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2-digit and 3-digit industry level because these group totals often include industries which represent successive stages in

the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC Major Group 20 and the addition of pulp-mills to papermills in Group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, caution is urged with their use when they are provided at the 2- and 3-digit industry group level.

Even where no significant amount of duplication is involved, value of shipments figures are of limited use as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry. To a large extent, value added by manufacture does not have these limitations and is therefore a better measure for comparison.

## 17. VALUE ADDED BY MANUFACTURE

**General.**—Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.<sup>21</sup>

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude purchased business services, as does the national income concept described below.<sup>22</sup> Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

<sup>21</sup> For a few industries (for example, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

<sup>22</sup> Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated to plants or if allocated are only included as part of a broader company overhead category. National income data, on the other hand, are compiled in part from company rather than plant data, such as the IRS Statistics of Income in which advertising is presented as a separate cost item based on company reports.

# INTRODUCTION—Continued

National income originating in the manufacturing sector, as developed in the national accounts maintained by the Bureau of Economic Analysis (BEA), is somewhat similar to value added in concept, but there are important differences. National income is the aggregate earnings of labor and capital which arise in the current production of goods and services in the manufacturing sector. Thus it measures the total factor costs incurred and is a more "net" conception of value added than that which it has been found feasible to compile in the economic censuses on an establishment basis. National income

excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income estimates are prepared from company rather than establishment data. This method results

<sup>2</sup>This Major Group was recoded to Major Groups 34, 36, 37 and 38 in the 1972 SIC revision.

in the inclusion of some part of the net value added by non-manufacturing establishments of companies classified as being primarily manufacturing and, conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classified as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases national income. In the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one group in which national income exceeds value added, as shown in table J.

**Historical Comparison.**—Whatever changes have taken place in the relative importance of the costs included in value added but excluded from national income have been gradual. As shown in table K, the ratio between the two figures has been fairly constant over the past decade.

TABLE K. National Income Originating in Manufacturing and Value Added by Manufacture: 1972 and Earlier Years

Year	National income originating in manufacturing  (bil. dol.) (1)	Value added by manufacture  (bil. dol.) (2)	Column 1 divided by column 2
1972 .....	252.6	354.0	0.71
1971 .....	226.4	314.1	.72
1970 .....	217.5	300.2	.72
1969 .....	222.3	304.4	.73
1968 .....	212.7	285.1	.75

1939 .....	18.1	<sup>1</sup> 24.5	.74

<sup>1</sup> Unadjusted.

Sources: National income, survey of current business; value added, census of manufactures and annual survey of manufactures.

**Reconciliation with National Income Components.**—Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income originating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about \$15 billion of the \$148 billion of value added in 1957 were maintenance and repairs, \$4.5 billion; insurance, \$.7 billion; property taxes, \$1.5 billion; rental payments, \$1.4 billion; and depreciation, \$7.3 billion. The residual value added, \$132 billion, was approximately \$16 billion in excess of national income of \$116 billion.

Table L presents an approximate reconciliation of national income and value added figures for manufacturing in 1957. The national income estimates for payrolls and other factor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimate appearing in table K. It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by \$35 billion of which \$15 billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the \$35 billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion, in value added, of indirect business taxes and depreciation which are excluded by definition from national income.

## 18. CAPITAL EXPENDITURES

Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Bureau of Economic Analysis-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments,

TABLE L. 1957 Comparative Statistics on Value Added and National Income in Manufacturing

(Billions of dollars)

Item	Value added	National income <sup>1</sup>
Total .....	147.8	112.5
Payrolls .....	89.4	87.9
Payrolls of operating manufacturing establishments .....	76.4	<sup>2</sup> 80.6
Supplements to wages in operating manufacturing establishments .....	6.0	
Payrolls of central administrative offices and auxiliaries, sales branches and offices of manufacturing companies .....	47.0	
Other factor incomes (Corporate profits, proprietary income) .....	24.6	<sup>3</sup> 7.2
Costs of manufacturing establishments reported on MC-D11 .....	15.4	<sup>4</sup> (X)
Not part of national income:		
Depreciation .....	7.3	(X)
Property taxes .....	1.5	(X)
Probably included in other sectors:		
Maintenance and repairs .....	4.5	(X)
Rental payments .....	1.4	(X)
Insurance .....	.7	(X)
Other costs (company overhead other than payrolls included above; e.g., company-level depreciation, business taxes, and services purchased, and services purchased directly by plants, advertising, legal, accounting, and other professional services; communications, patent fees, royalties, travel costs, etc. . .	18.4	(X)

(X) Not applicable.

<sup>1</sup> Prior to 1958 revisions of national income. The revised total was \$116.3 billion.<sup>2</sup> Payrolls.<sup>3</sup> Supplements to wages.<sup>4</sup> Estimate based on figures reported in the 1958 economic censuses.

whereas the BEA-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from

the BEA-SEC series but included in census figures. The BEA-SEC and census data for recent years are shown in tables M and N.

## 19. PLANT SPECIALIZATION

As discussed in section 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two measures of specialization were computed: (1) A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these

TABLE N. Expenditures for New Plant and Equipment—BEA—SEC Series and Census of Manufactures, by Industry Group: 1972

Industry groups	BEA-SEC series <sup>1</sup>  (bil. dol.) (1)	Census of manu- factures,  (bil. dol.) (2)	Column 2 divided by column 1
All manufacturing, total . . . . .	31.4	24.1	0.77
Durable goods, total . . . . .	15.7	12.7	.81
Primary metals . . . . .	2.8	2.1	.75
Electric machinery . . . . .	2.4	1.4	.58
Machinery, except electric . . . .	2.9	1.9	.66
Transportation equipment . . . .	2.5	2.7	1.08
Stone, clay, and glass . . . . .	1.2	1.2	1.00
Other durables . . . . .	3.9	3.4	.87
Nondurable goods, total . . . . .	15.7	11.4	.73
Food and beverages . . . . .	2.6	2.4	.92
Textiles . . . . .	.7	1.1	1.57
Paper . . . . .	1.4	1.3	.93
Chemicals . . . . .	3.5	2.7	.77
Petroleum . . . . .	5.3	1.2	.23
Rubber . . . . .	1.1	1.1	1.00
Other nondurables . . . . .	1.1	1.6	1.45

<sup>1</sup>Source: 1974 Business Statistics, U.S. Department of Commerce, Bureau of Economic Analysis.

calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	\$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32721 Concrete pipe products	100
32722 Precast concrete products	785
32730 Ready-mixed concrete	100

This plant would be coded into SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent (\$885÷985); it would be subclassified into the 5-digit class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent (\$785÷985).

In the 1972 census, selected general statistics (number of establishments, employment, payrolls, value added, cost of materials, value of shipments, and capital expenditures) were tabulated to primary product-class levels by assigning the plant totals to the principal 5-digit codes. These data are presented in table 5A of the industry chapters, Volume II. For most product classes, table 5A also provides general statistics for establishments specializing in the class to the extent of 75 percent or more.

Table 5A permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup (5-digit). For example, where the ratios among various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by changes in its product mix.

## 20. OPERATING RATIOS

Since all of the data collected in the census on establishment reports are interrelated, comparisons of the various measures of activity are of considerable interest. Beginning with the 1963 census, several ratios have been routinely computed and presented in the industry chapters of Volume II. For 1972 and earlier years, the following nine ratios were published for each 4-digit industry:

Payroll per employee
Production workers as percent of total employment
Annual man-hours of production workers
Average hourly earnings of production workers
Cost of materials per dollar of shipments
Cost of materials and payrolls per dollar of shipments
Value added per employee
Payrolls as percent of value added
Value added per man-hour of production worker

## 21. SUBJECT AND SPECIAL REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

Volume I includes the seven subject reports and the six special reports presenting statistics which are not published

elsewhere. The following chapters were originally published in the subject series:

**Chapter 1. General Summary.**—This chapter, which appears in other volumes as well as Volume I, provides summary tabulations of data presented in greater detail in other census tables.

**Chapter 2. Employment and Labor Costs in Operating Manufacturing Establishments.**—This chapter presents the compilation of employment and labor costs for the United States as a whole and for each industry group and 4-digit industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

**Chapter 3. Manufacturers' Inventories.**—These tables summarize the inventory data published in table 3 of the industry chapters of Volume II. A description of the statistics is given in appendix A.

**Chapter 4. Expenditures for Plant and Equipment.**—These tables summarize the expenditures data published in table 3 of the industry chapters of Volume II. A description of the data is given in appendix A and in section 18, "Capital Expenditures."

**Chapter 5. Materials Consumed.**—This chapter consists of a compilation of detailed statistics on consumption of materials, fuels, and electricity. These figures also appear in Volume II, Industry Statistics, as tables 7A and 7B for each industry.

**Chapter 6. Gross Book Value of Depreciable Assets and Rental Payments.**—This chapter presents the compilation of the gross book value of total assets and separate data for structure and machinery by industry group and industry. Rental payments for structures and machinery are also presented by industry group and industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

**Chapter 7. Selected Metalworking Operations.**—This chapter presents the results of an inquiry concerning employment in metalworking plants such as foundry, forge shop, die casting department, and heat treating. The number of establishments in which these facilities are operated is presented, as well as the number of production workers engaged.

The following chapters were originally published in the special report series:

**Chapter 8. Manufacturing Activity in Government Establishments.**—This chapter presents data on manufacturing activities in selected types of government establishments in the United States. The statistics are not included in other census of manufactures tables, which cover only privately operated establishments. A more detailed description of the report is given in the introduction to the chapter.

**Chapter 9. Concentration Ratios.**—This chapter presents concentration ratios and other information on the share of industrial activity accounted for by the largest companies, both for the United States as a whole and for each of the 450 manufacturing industries. A more detailed description of the report and explanations of the terms employed is given in the introduction to the chapter.

**Chapter 10. Type of Organization.**—This chapter presents data for manufacturing establishments classified as to the legal form of ownership (corporate, individual proprietor, or partnership) and the establishment owner as a multiunit or single-unit company.

**Chapter 11. Water Use in Manufacturing.**—This chapter presents the results of a survey of the 1973 consumption of water in establishments consuming 20 million gallons or more annually. A more detailed description of the report and definitions of the terms employed, is given in the introduction to the chapter.

**Chapter 12. Textile Machinery in Place.**—This chapter presents the results of a 1973 survey on the number, by kind, of the various textile machines. Geographic breakdowns of the major textile operations are presented. The data are also broken out by industry for the various textile machines. A description of the statistics is given in the chapter.

**Chapter 13. Fuels and Electric Energy Consumed.**—This chapter consists of a compilation of detailed statistics on the consumption of fuels and electric energy from the 1971 Annual Survey of Manufactures. Data are presented on the quantity and costs of fuels and electric energy consumed for major groups and industries. A more detailed explanation of the estimates derived and terms employed are given in the introduction and the explanatory text for the chapter.

## 22. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, geographic region and division totals are given precedence over individual States; States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities. In tables showing industry detail, major industry group (2-digit) totals take precedence over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

## 23. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

—	Zero
X	Not applicable
NA	Not available
D	Withheld to avoid disclosing figures for individual companies
n.e.c.	Not elsewhere classified
n.s.k.	Not specified by kind
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kWh	Kilowatt-hours
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
BEA	Bureau of Economic Analysis
SEC	Securities and Exchange Commission

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

---

*Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.*

---

## Industry Descriptions

- 2013 Sausages and other prepared meats
- 2016 Poultry dressing plants
- 2017 Poultry and egg processing

##### 20B Dairy Products

- 2021 Creamery butter
- 2022 Cheese, natural and processed
- 2023 Condensed and evaporated milk
- 2024 Ice cream and frozen desserts
- 2026 Fluid milk

##### 20C Preserved Fruits and Vegetables

- 2032 Canned specialties
- 2033 Canned fruits and vegetables
- 2034 Dehydrated fruits, vegetables, soups
- 2035 Pickles, sauces, and salad dressings
- 2037 Frozen fruits and vegetables
- 2038 Frozen specialties

##### 20D Grain Mill Products

- 2041 Flour and other grain mill products
- 2043 Cereal breakfast foods
- 2044 Rice milling
- 2045 Blended and prepared flour
- 2046 Wet corn milling
- 2047 Dog, cat, and other pet food
- 2048 Prepared feeds, n.e.c.

##### 20E Bakery Products

- 2051 Bread, cake, and related products
- 2052 Cookies and crackers

##### 20F Sugar and Confectionery Products

- 2061 Raw cane sugar
- 2062 Cane sugar refining
- 2063 Beet sugar
- 2065 Confectionery products
- 2066 Chocolate and cocoa products
- 2067 Chewing gum

##### 20G Fats and Oils

- 2074 Cottonseed oil mills
- 2075 Soybean oil mills
- 2076 Vegetable oil mills, n.e.c.
- 2077 Animal and marine fats and oils
- 2079 Shortening and cooking oils

##### 20H Beverages

- 2082 Malt beverages
- 2083 Malt
- 2084 Wines, brandy, and brandy spirits
- 2085 Distilled liquor, except brandy
- 2086 Bottled and canned soft drinks
- 2087 Flavoring extracts and sirups, n.e.c.

##### 20I Miscellaneous Foods and Kindred Products

- 2091 Canned and cured seafoods
- 2092 Fresh or frozen packaged fish
- 2095 Roasted coffee
- 2097 Manufactured ice
- 2098 Macaroni and spaghetti
- 2099 Food preparations, n.e.c.

#### Major Group 21—TOBACCO MANUFACTURES

##### 21A Tobacco Products

- 2111 Cigarettes
- 2121 Cigars
- 2131 Chewing and smoking tobacco
- 2141 Tobacco stemming and redrying

#### Major Group 22—TEXTILE MILL PRODUCTS

##### 22A Weaving Mills

- 2211 Weaving mills, cotton
- 2221 Weaving mills, manmade fiber and silk
- 2231 Weaving and finishing mills, wool
- 2241 Narrow fabric mills

##### 22B Knitting Mills

- 2251 Women's hosiery, except socks
- 2252 Hosiery, n.e.c.
- 2253 Knit outerwear mills
- 2254 Knit underwear mills
- 2257 Circular knit fabric mills
- 2258 Warp knit fabric mills
- 2259 Knitting mills, n.e.c.

##### 22C Dyeing and Finishing Textiles, Except Wool Fabrics and Knit Goods

- 2261 Finishing plants, cotton
- 2262 Finishing plants, manmade fiber and silk
- 2269 Finishing plants, n.e.c.

##### 22D Floor Covering Mills

- 2271 Woven carpets and rugs
- 2272 Tufted carpets and rugs
- 2279 Carpets and rugs, n.e.c.

## INDUSTRY DESCRIPTIONS—Continued

### 22E Yarn and Thread Mills

- 2281 Yarn mills, except wool
- 2282 Throwing and winding mills
- 2283 Wool yarn mills
- 2284 Thread mills

### 22F Miscellaneous Textile Goods

- 2291 Felt goods, except woven felts and hats
- 2292 Lace goods
- 2293 Paddings and upholstery filling
- 2294 Processed textile waste
- 2295 Coated fabrics, not rubberized
- 2296 Tire cord and fabric
- 2297 Nonwoven fabrics
- 2298 Cordage and twine
- 2299 Textile goods, n.e.c.

## Major Group 23—APPAREL AND OTHER TEXTILE PRODUCTS

### 23A Men's and Boys' Apparel

- 2311 Men's and boys' suits and coats
- 2321 Men's and boys' shirts and nightwear
- 2322 Men's and boys' underwear
- 2323 Men's and boys' neckwear
- 2327 Men's and boys' separate trousers
- 2328 Men's and boys' work clothing
- 2329 Men's and boys' clothing, n.e.c.

### 23B Women's and Misses' Outerwear

- 2331 Women's and misses' blouses and waists
- 2335 Women's and misses' dresses
- 2337 Women's and misses' suits and coats
- 2339 Women's and misses' outerwear, n.e.c.

### 23C Women's and Children's Underwear, Headwear, Children's Outerwear

- 2341 Women's and children's underwear
- 2342 Brassieres and allied garments
- 2351 Millinery
- 2352 Hats and caps, except millinery
- 2361 Children's dresses and blouses
- 2363 Children's coats and suits
- 2369 Children's outerwear, n.e.c.

### 23D Miscellaneous Apparel and Accessories

- 2371 Fur goods
- 2381 Fabric dress and work gloves
- 2384 Robes and dressing gowns
- 2385 Waterproof outer garments
- 2386 Leather and sheep lined clothing
- 2387 Apparel belts
- 2389 Apparel and accessories, n.e.c.

### 23E Miscellaneous Fabricated Textile Products

- 2391 Curtains and draperies
- 2392 Housefurnishings, n.e.c.
- 2393 Textile bags
- 2394 Canvas and related products
- 2395 Pleating and stitching
- 2396 Automotive and apparel trimmings
- 2397 Schiffli machine embroideries
- 2399 Fabricated textile products, n.e.c.

## Major Group 24—LUMBER AND WOOD PRODUCTS

### 24A Logging Camps, Sawmills, and Planing Mills

- 2411 Logging camps and logging contractors
- 2421 Sawmills and planing mills, general
- 2426 Hardwood dimension and flooring
- 2429 Special product sawmills, n.e.c.

### 24B Millwork, Plywood, and Structural Wood Members, N.E.C.

- 2431 Millwork
- 2434 Wood kitchen cabinets
- 2435 Hardwood veneer and plywood
- 2436 Softwood veneer and plywood
- 2439 Structural wood members, n.e.c.

### 24C Wooden Containers and Miscellaneous Wood Products

- 2441 Nailed wood boxes and shooks
- 2448 Wood pallets and skids
- 2449 Wood containers, n.e.c.
- 2491 Wood preserving
- 2492 Particleboard
- 2499 Wood products, n.e.c.

### 24D Wood Buildings and Mobile Homes

- 2451 Mobile homes
- 2452 Prefabricated wood buildings

## PART 2

## Major Group 25—FURNITURE AND FIXTURES

### 25A Household Furniture

- 2511 Wood household furniture
- 2512 Upholstered household furniture
- 2514 Metal household furniture
- 2515 Mattresses and bedsprings
- 2517 Wood TV and radio cabinets
- 2519 Household furniture, n.e.c.

# INDUSTRY DESCRIPTIONS—Continued

## 25B Office, Public Building, and Miscellaneous Furniture; Office and Store Fixtures

- 2521 Wood office furniture
- 2522 Metal office furniture
- 2531 Public building and related furniture
- 2541 Wood partitions and fixtures
- 2542 Metal partitions and fixtures
- 2591 Drapery hardware and blinds and shades
- 2599 Furniture and fixtures, n.e.c.

## 27C Greeting Cards; Bookbinding; Printing Trade Services

- 2771 Greeting card publishing
- 2782 Blankbooks and looseleaf binders
- 2789 Bookbinding and related work
- 2791 Typesetting
- 2793 Photoengraving
- 2794 Electrotyping and stereotyping
- 2795 Lithographic platemaking services

## Major Group 26—PAPER AND ALLIED PRODUCTS

### 26A Pulp, Paper, and Board Mills

- 2611 Pulp mills
- 2621 Paper mills, except building paper
- 2631 Paperboard mills
- 2661 Building paper and board mills

### 26B Converted Paper and Paperboard Products, Except Containers and Boxes

- 2641 Paper coating and glazing
- 2642 Envelopes
- 2643 Bags, except textile bags
- 2645 Die-cut paper and board
- 2646 Pressed and molded pulp goods
- 2647 Sanitary paper products
- 2648 Stationery products
- 2649 Converted paper products, n.e.c.

### 26C Paperboard Containers and Boxes

- 2651 Folding paperboard boxes
- 2652 Setup paperboard boxes
- 2653 Corrugated and solid fiber boxes
- 2654 Sanitary food containers
- 2655 Fiber cans, drums, and similar products

## Major Group 26—PRINTING AND PUBLISHING

### 27A Newspapers, Periodicals, Books, and Miscellaneous Publishing

- 2711 Newspapers
- 2721 Periodicals
- 2731 Book publishing
- 2732 Book printing
- 2741 Miscellaneous publishing

### 27B Commercial Printing and Manifold Business Forms

- 2751 Commercial printing, letterpress
- 2752 Commercial printing, lithographic
- 2753 Engraving and plate printing
- 2754 Commercial printing, gravure
- 2761 Manifold business forms

## Major Group 28—CHEMICALS AND ALLIED PRODUCTS

### 28A Industrial Inorganic Chemicals

- 2812 Alkalies and chlorine
- 2813 Industrial gases
- 2816 Inorganic pigments
- 2819 Industrial inorganic chemicals, n.e.c.

### 28B Plastics Materials, Synthetic Rubber, and Manmade Fibers

- 2821 Plastics materials and resins
- 2822 Synthetic rubber
- 2823 Cellulosic manmade fibers
- 2824 Organic fibers, noncellulosic

### 28C Drugs

- 2831 Biological products
- 2833 Medicinals and botanicals
- 2834 Pharmaceutical preparations

### 28D Soap, Cleaners, and Toilet Goods

- 2841 Soap and other detergents
- 2842 Polishes and sanitation goods
- 2843 Surface active agents
- 2844 Toilet preparations

### 28E Paints and Allied Products

- 2851 Paints and allied products

### 28F Industrial Organic Chemicals

- 2861 Gum and wood chemicals
- 2865 Cyclic crudes and intermediates
- 2869 Industrial organic chemicals, n.e.c.

### 28G Agricultural Chemicals

- 2873 Nitrogenous fertilizers
- 2874 Phosphatic fertilizers
- 2875 Fertilizers, mixing only
- 2879 Agricultural chemicals, n.e.c.

### 28H Miscellaneous Chemical Products

- 2891 Adhesives and sealants
- 2892 Explosives
- 2893 Printing ink
- 2895 Carbon black
- 2899 Chemical preparations, n.e.c.

# INDUSTRY DESCRIPTIONS—Continued

## Major Group 29—PETROLEUM AND COAL PRODUCTS

### 29A Petroleum and Coal Products

- 2911 Petroleum refining
- 2951 Paving mixtures and blocks
- 2952 Asphalt felts and coatings
- 2992 Lubricating oils and greases
- 2999 Petroleum and coal products, n.e.c.

## Major Group 30—RUBBER AND PLASTICS PRODUCTS

### 30A Rubber and Miscellaneous Plastics Products

- 3011 Tires and inner tubes
- 3021 Rubber and plastics footwear
- 3031 Reclaimed rubber
- 3041 Rubber and plastics hose and belting
- 3069 Fabricated rubber products, n.e.c.
- 3079 Miscellaneous plastics products

## Major Group 31—LEATHER AND LEATHER PRODUCTS

### 31A Tanning; Industrial Leather Goods; and Shoes

- 3111 Leather tanning and finishing
- 3131 Boot and shoe cut stock and findings
- 3142 House slippers
- 3143 Men's footwear, except athletic
- 3144 Women's footwear, except athletic
- 3149 Footwear, except rubber, n.e.c.

### 31B Leather Gloves; Luggage; and Miscellaneous Leather Goods

- 3151 Leather gloves and mittens
- 3161 Luggage
- 3171 Women's handbags and purses
- 3172 Personal leather goods
- 3199 Leather goods, n.e.c.

## Major Group 32—STONE, CLAY, AND GLASS PRODUCTS

### 32A Glass Products

- 3211 Flat glass
- 3221 Glass containers
- 3229 Pressed and blown glass, n.e.c.
- 3231 Products of purchased glass

### 32B Cement and Structural Clay Products

- 3241 Cement, hydraulic
- 3251 Brick and structural clay tile
- 3253 Ceramic wall and floor tile
- 3255 Clay refractories
- 3259 Structural clay products, n.e.c.

### 32C Pottery and Related Products

- 3261 Vitreous plumbing fixtures
- 3262 Vitreous china food utensils
- 3263 Fine earthenware food utensils
- 3264 Porcelain electrical supplies
- 3269 Pottery products, n.e.c.

### 32D Concrete, Plaster, and Cut-Stone Products

- 3271 Concrete block and brick
- 3272 Concrete products, n.e.c.
- 3273 Ready-mixed concrete
- 3274 Lime
- 3275 Gypsum products
- 3281 Cut stone and stone products

### 32E Abrasive, Asbestos, and Miscellaneous Nonmetallic Mineral Products

- 3291 Abrasive products
- 3292 Asbestos products
- 3293 Gaskets, packing and sealing devices
- 3295 Minerals, ground or treated
- 3296 Mineral wool
- 3297 Nonclay refractories
- 3299 Nonmetallic mineral products, n.e.c.

## Major Group 33—PRIMARY METAL INDUSTRIES

### 33A Blast Furnaces, Steel Works, and Rolling and Finishing Mills

- 3312 Blast furnaces and steel mills
- 3313 Electrometallurgical products
- 3315 Steel wire and related products
- 3316 Cold finishing of steel shapes
- 3317 Steel pipe and tubes

### 33B Ferrous and Nonferrous Foundries

- 3321 Gray iron foundries
- 3322 Malleable iron foundries
- 3324 Steel investment foundries
- 3325 Steel foundries, n.e.c.
- 3361 Aluminum foundries
- 3362 Brass, bronze, and copper foundries
- 3369 Nonferrous foundries, n.e.c.

### 33C Smelting and Refining of Nonferrous Metals and Alloys

- 3331 Primary copper
- 3332 Primary lead
- 3333 Primary zinc
- 3334 Primary aluminum
- 3339 Primary nonferrous metals, n.e.c.
- 3341 Secondary nonferrous metals

**33D Nonferrous Metal Mills and Miscellaneous Primary Metal Products**

- 3351 Copper rolling and drawing
- 3353 Aluminum sheet, plate, and foil
- 3354 Aluminum extruded products
- 3355 Aluminum rolling and drawing, n.e.c.
- 3356 Nonferrous rolling and drawing, n.e.c.
- 3357 Nonferrous wiredrawing and insulating
- 3398 Metal heat treating
- 3399 Primary metal products, n.e.c.

**PART 3**

**Major Group 34—FABRICATED METAL PRODUCTS**

**34A Metal Cans, Cutlery, Handtools, and General Hardware**

- 3411 Metal cans
- 3412 Metal barrels, drums, and pails
- 3421 Cutlery
- 3423 Hand and edge tools, n.e.c.
- 3425 Handsaws and saw blades
- 3429 Hardware, n.e.c.

**34B Heating Apparatus, Except Electric and Warm Air Furnaces, and Plumbing Fixtures**

- 3431 Metal sanitary ware
- 3432 Plumbing fittings and brass goods
- 3433 Heating equipment, except electric

**34C Fabricated Structural Metal Products**

- 3441 Fabricated structural metal products
- 3442 Metal doors, sash, and trim
- 3443 Fabricated platework (boiler shops)
- 3444 Sheet metalwork
- 3446 Architectural metalwork
- 3448 Prefabricated metal buildings
- 3449 Miscellaneous metalwork

**34D Screw Machine Products, Fasteners and Washers; Metal Forgings and Stampings; and Metal Services**

- 3451 Screw machine products
- 3452 Bolts, nuts, rivets, and washers
- 3462 Iron and steel forgings
- 3463 Nonferrous forgings
- 3465 Automotive stampings
- 3466 Crowns and closures
- 3469 Metal stampings, n.e.c.
- 3471 Plating and polishing
- 3479 Metal coating and allied services

**34E Ordnance and Accessories, N.E.C.**

- 3482 Small arms ammunition
- 3483 Ammunition, except for small arms, n.e.c.
- 3484 Small arms
- 3489 Ordnance and accessories, n.e.c.

**34F Miscellaneous Fabricated Metal Products**

- 3493 Steel springs, except wire
- 3494 Valves and pipe fittings
- 3495 Wire springs
- 3496 Miscellaneous fabricated wire products
- 3497 Metal foil and leaf
- 3498 Fabricated pipe and fittings
- 3499 Fabricated metal products, n.e.c.

**Major Group 35—MACHINERY, EXCEPT ELECTRICAL**

**35A Engines and Turbines and Farm Machinery and Equipment**

- 3511 Turbines and turbine generator sets
- 3519 Internal combustion engines, n.e.c.
- 3523 Farm machinery and equipment
- 3524 Lawn and garden equipment

**35B Construction, Mining, and Materials Handling Machinery and Equipment**

- 3531 Construction machinery
- 3532 Mining machinery
- 3533 Oilfield machinery
- 3534 Elevators and moving stairways
- 3535 Conveyors and conveying equipment
- 3536 Hoists, cranes, and monorails
- 3537 Industrial trucks and tractors

**35C Metalworking Machinery and Equipment**

- 3541 Machine tools, metal-cutting types
- 3542 Machine tools, metal-forming types
- 3544 Special dies, tools, jigs, and fixtures
- 3545 Machine tool accessories
- 3546 Power-driven handtools
- 3547 Rolling mill machinery
- 3549 Metalworking machinery, n.e.c.

**35D Special Industry Machinery, Except Metalworking Machinery**

- 3551 Food products machinery
- 3552 Textile machinery
- 3553 Woodworking machinery
- 3554 Paper industries machinery
- 3555 Printing trades machinery
- 3559 Special industry machinery, n.e.c.

**35E General Industrial Machinery and Equipment**

- 3561 Pumps and pumping equipment
- 3562 Ball and roller bearings
- 3563 Air and gas compressors
- 3564 Blowers and fans
- 3565 Industrial patterns
- 3566 Speed changers, drives, and gears
- 3567 Industrial furnances and ovens
- 3568 Power transmission equipment, n.e.c.
- 3569 General industrial machinery, n.e.c.

# INDUSTRY DESCRIPTIONS—Continued

## 35F Office, Computing, and Accounting Machines

- 3572 Typewriters
- 3573 Electronic computing equipment
- 3574 Calculating and accounting machines
- 3576 Scales and balances, except laboratory
- 3579 Office machines, n.e.c.

## 35G Service Industry Machines and Machine Shops

- 3581 Automatic merchandising machines
- 3582 Commercial laundry equipment
- 3585 Refrigeration and heating equipment
- 3586 Measuring and dispensing pumps
- 3589 Service industry machinery, n.e.c.
- 3592 Carburetors, pistons, rings, valves
- 3599 Machinery, except electrical, n.e.c.

## Major Group 36—ELECTRIC AND ELECTRONIC EQUIPMENT

### 36A Electrical Measurement and Distribution Equipment

- 3612 Transformers
- 3613 Switchgear and switchboard apparatus
- 3621 Motors and generators
- 3622 Industrial controls
- 3623 Welding apparatus, electric
- 3624 Carbon and graphite products
- 3629 Electrical industrial apparatus, n.e.c.

### 36B Household Appliances

- 3631 Household cooking equipment
- 3632 Household refrigerators and freezers
- 3633 Household laundry equipment
- 3634 Electric housewares and fans
- 3635 Household vacuum cleaners
- 3636 Sewing machines
- 3639 Household appliances, n.e.c.

### 36C Electric Lighting and Wiring Equipment

- 3641 Electric lamps
- 3643 Current-carrying wiring devices
- 3644 Noncurrent-carrying wiring devices
- 3645 Residential lighting fixtures
- 3646 Commercial lighting fixtures
- 3647 Vehicular lighting equipment
- 3648 Lighting equipment, n.e.c.

### 36D Communication Equipment, Including Radio and TV, and Electronic Components and Accessories

- 3651 Radio and TV receiving sets
- 3652 Phonograph records and prerecorded magnetic tapes
- 3661 Telephone and telegraph apparatus
- 3662 Radio and TV communication equipment
- 3671 Electron tubes, receiving type
- 3672 Cathode ray television picture tubes

### 36D— Communication Equipment, Including Radio and Con. TV, and Electronic Components and Accessories

- 3673 Electron tubes, transmitting
- 3674 Semiconductors and related devices
- 3675 Electronic capacitors
- 3676 Electronic resistors
- 3677 Electronic coils and transformers
- 3678 Electronic connectors
- 3679 Electronic components, n.e.c.

### 36E Miscellaneous Electrical Equipment and Supplies

- 3691 Storage batteries
- 3692 Primary batteries, dry and wet
- 3693 X-ray apparatus and tubes
- 3694 Engine electrical equipment
- 3699 Electrical equipment and supplies, n.e.c.

## Major Group 37—TRANSPORTATION EQUIPMENT

### 37A Motor Vehicles and Equipment

- 3711 Motor vehicles and car bodies
- 3713 Truck and bus bodies
- 3714 Motor vehicle parts and accessories
- 3715 Truck trailers

### 37B Aerospace Equipment Including Parts

- 3721 Aircraft
- 3724 Aircraft engines and engine parts
- 3728 Aircraft equipment, n.e.c.
- 3761 Guided missiles and space vehicles
- 3764 Space propulsion units and parts
- 3769 Space vehicle equipment, n.e.c.

### 37C Ship and Boat Building, Railroad and Miscellaneous Transportation Equipment

- 3731 Ship building and repairing
- 3732 Boat building and repairing
- 3743 Railroad equipment
- 3751 Motorcycles, bicycles, and parts
- 3792 Travel trailers and campers
- 3795 Tanks and tank components
- 3799 Transportation equipment, n.e.c.

## Major Group 38—INSTRUMENTS AND RELATED PRODUCTS

### 38A Engineering, Measuring and Controlling, and Optical Instruments

- 3811 Engineering and scientific instruments
- 3822 Environmental controls
- 3823 Process control instruments
- 3824 Fluid meters and counting devices
- 3825 Instruments to measure electricity
- 3829 Measuring and controlling devices, n.e.c.
- 3832 Optical instruments and lenses

---

INDUSTRY DESCRIPTIONS—Continued

**38B Medical Instruments; Ophthalmic Goods; Photographic Equipment; Clocks, Watches, and Watchcases**

- 3841 Surgical and medical instruments
- 3842 Surgical appliances and supplies
- 3843 Dental equipment and supplies
- 3851 Ophthalmic goods
- 3861 Photographic equipment and supplies
- 3873 Watches, clocks, and watchcases

**Major Group 39—MISCELLANEOUS MANUFACTURING INDUSTRIES**

**39A Jewelry, Silverware, and Plated Wire**

- 3911 Jewelry, precious metal
- 3914 Silverware and plated ware
- 3915 Jewelers' materials and lapidary work

**39B Musical Instruments and Parts; Toys and Sporting Goods**

- 3931 Musical instruments
- 3942 Dolls

**39B— Musical Instruments and Parts; Toys and Sporting Con. Goods**

- 3944 Games, toys, and children's vehicles
- 3949 Sporting and athletic goods, n.e.c.

**39C Office Supplies, Costume Jewelry, and Notions**

- 3951 Pens and mechanical pencils
- 3952 Lead pencils and art goods
- 3953 Marking devices
- 3955 Carbon paper and inked ribbons
- 3961 Costume jewelry
- 3962 Artificial flowers
- 3963 Buttons
- 3964 Needles, pins, and fasteners

**39D Miscellaneous Manufactures**

- 3991 Brooms and brushes
- 3993 Signs and advertising displays
- 3995 Burial caskets
- 3996 Hard-surface floor coverings
- 3999 Manufacturing industries, n.e.c.

---

## MAJOR GROUP 35

### Machinery, Except Electrical

- 35A Engines and turbines and farm machinery and equipment
- 35B Construction, mining, and materials handling machinery and equipment
- 35C Metalworking machinery and equipment
- 35D Special industry machinery, except metalworking machinery
- 35E General industrial machinery and equipment
- 35F Office, computing and accounting machines
- 35G Service industry machines and machine shops

This major group includes establishments engaged in manufacturing machinery and equipment, other than electrical equipment, Major Group 36, and transportation equipment in Major Group 37. Machines powered by built-in or detachable motors ordinarily are included in this major group, with the exception of electrical household appliances, Major Group 36. Portable tools, both electric and pneumatic-powered, are included in this major group, but handtools are classified in Major Group 34.

TABLE 1. General Statistics: 1972 and Earlier Years

(See appendix, Explanation of Terms)

Year and item	Establishments		All employees <sup>1</sup>		Production workers			Value added by manufacture <sup>2</sup>	Cost of materials <sup>3</sup>	Value of industry shipments <sup>3</sup>	Capital expenditures, new <sup>4</sup>
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages				
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
All manufacturing establishments, total: <sup>5</sup>											
1972.....	41,457	10,952	1,930.0	20,047.9	1,266.9	2,538.3	11,358.6	37,562.9	29,204.1	65,820.7	1,906.3 <sup>6</sup>
1967.....	38,278	10,847	1,929.4	14,930.2	1,349.0	2,785.0	9,236.1	27,836.4	21,231.6	48,477.2	1,868.1

(X) Not applicable. (NA) Not available.

<sup>1</sup>The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.<sup>2</sup>For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.<sup>3</sup>The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.<sup>4</sup>The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.<sup>5</sup>See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.<sup>6</sup>Data for number of employees at manufacturers' central administrative offices and auxiliary units are shown in this table for 1954, 1958, 1963, 1967, and 1972, and for 1949 to 1953 in annual survey of manufactures volumes. Data for such employees are not available for 1955 to 1957, 1959 to 1962, 1964 to 1966, 1968 to 1971, and for the years prior to 1949.<sup>7</sup>These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.<sup>8</sup>The figures for 1939 to 1972 are not entirely comparable with those for 1937 because the 1937 figures (a) include data for establishments primarily engaged in the manufacture of thermostats and gauges, heat treating of steel, machine knives, and tackle blocks, and (b) exclude data for establishments primarily engaged in the manufacture of vacuum cleaners, turbo-generators and water-wheel generator sets, hair clippers for animal use, brooders, nonferrous bearings, certain industrial furnaces and ovens, time-stamps and time-recording machines, dictating machines, certain valves and fittings (except plumbers') and caulking guns. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was \$1,989.6 million.<sup>9</sup>The figures prior to 1937 are not sufficiently comparable to those for later years to be shown in this table, principally because they include data for establishments primarily engaged in the manufacture of aircraft engines and in machine shop repairs.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

<sup>2</sup>The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

# EXPLANATORY TEXT

## ENGINES AND TURBINES AND FARM MACHINERY AND EQUIPMENT

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

- 3511—Steam, Gas, and Hydraulic Turbines and Turbine Generator Set Units\***
- 3519—Internal Combustion Engines, N.E.C.**
- 3523—Farm Machinery and Equipment**
- 3524—Garden Tractors and Lawn and Garden Equipment\***

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

### INDUSTRY 3511.—TURBINES AND TURBINE GENERATOR SETS (Short Title)

This industry includes establishments primarily engaged in manufacturing steam turbines; hydraulic turbines; gas turbines, except aircraft; complete steam, gas, and hydraulic turbine generator set units; and steam engines. For a detailed list of products of industry 3511, refer to table 6A, product codes 35111 13 to 35112 81.

Establishments primarily engaged in building or rebuilding locomotives are classified in industry 3743 (Railroad Equipment); and those manufacturing nonautomotive-type generators which are not part of a turbine generator set, in industry 3621 (Motors and Generators).

---

\*Note that the "short title" for this industry is used throughout the report.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Turbines and Turbine Generator Sets Industry in 1972 totaled \$2,189 million. This included shipments of turbines and turbine generator sets (primary products) valued at \$1,877 million, shipments of other products (secondary products) valued at \$171 million, and miscellaneous receipts (mainly resales) of \$141 million.

Shipments of turbines and turbine generator sets (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 83 percent.

Shipments of turbines and turbine generator sets (primary products) from establishments classified in industry 3511 in 1972 represented 90 percent (coverage ratio) of these products valued at \$2,080 million shipped by all industries. In 1967, the coverage ratio was 78 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3511, these establishments accounted for less than 1 percent of value of shipments.

### INDUSTRY 3519.—INTERNAL COMBUSTION ENGINES, N.E.C.

This industry includes establishments primarily engaged in manufacturing diesel, semidiesel, or other internal combustion engines, not elsewhere classified, for stationary, marine, traction, and other uses. For a detailed list of products of industry 3519, refer to table 6A, product codes 35191 00 to 35199 15.

Establishments primarily engaged in manufacturing aircraft engines are classified in industry 3724 (Aircraft Engines and Engine Parts); automotive engines (except diesel) in industry 3714 (Motor Vehicle Parts and Accessories); engine generator sets in industry 3621 (Motors and Generators); and guided

missile and space vehicle propulsion units in industry 3764 (Space Propulsion Units and Parts).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Internal Combustion Engines, N.E.C., Industry in 1972 totaled \$3,326 million. This included shipments of internal combustion engines, n.e.c., (primary products) valued at \$2,872 million, shipments of other products (secondary products) valued at \$270 million, and miscellaneous receipts (mainly resales) of \$184 million.

Shipments of internal combustion engines, n.e.c., (primary products) in 1972 represented 91 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 89 percent.

Shipments of internal combustion engines, n.e.c., (primary products) from establishments classified in industry 3519 in 1972 represented 86 percent (coverage ratio) of these products valued at \$3,353 million shipped by all industries. In 1967, the coverage ratio was 83 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3519, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3523.—FARM MACHINERY AND EQUIPMENT**

This industry includes establishments primarily engaged in manufacturing farm machinery and equipment, including wheel tractors, for use in the preparation and maintenance of the soil; planting and harvesting of the crop; preparation of crops for market, on the farm; or for use in performing other farm operations and processes. For a detailed list of products of industry 3523, refer to table 6A, product codes 35231 00 to 35239 85.

Establishments primarily engaged in manufacturing industrial trucks, tractors, and trailers used for handling materials in industrial plants, depots, and docks are classified in industry

3537 (Industrial Trucks and Tractors); contractors' off-highway tractors are classified in industry 3531 (Construction Machinery); farm handtools in SIC group 342 (Cutlery, Handtools, and Hardware); and garden tractors, lawnmowers, and other lawn and garden equipment in industry 3524.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The classification system followed in the 1967 census were split, as a result of the 1972 edition of the SIC manual, into two separate industries: Industry 3523, Farm Machinery and Equipment; and industry 3524, Lawn and Garden Equipment. Farm trailers and wagons previously classified in industry 3799 (Transportation Equipment, N.E.C.), are now included in industry 3523. The effects of these changes can be seen in table 1C.

Value of shipments and other receipts of the Farm Machinery and Equipment Industry in 1972 totaled \$4,530 million. This included shipments of farm machinery and equipment (primary products) valued at \$3,906 million, shipments of other products (secondary products) valued at \$430 million, and miscellaneous receipts (mainly resales) of \$194 million.

Shipments of farm machinery and equipment (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Shipments of farm machinery and equipment (primary products) from establishments classified in industry 3523 in 1972 represented 94 percent (coverage ratio) of these products valued at \$4,144 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3523, these establishments accounted for 4 percent of value of shipments.

#### **INDUSTRY 3524.—LAWN AND GARDEN EQUIPMENT (Short Title)**

This industry includes establishments primarily engaged in manufacturing lawnmowers, garden tractors, and other lawn and garden equipment used for home lawn and garden care. This industry also includes establishments primarily engaged in

manufacturing snowblowers and throwers for residential use. For a detailed list of products of industry 3524, refer to table 6A, product codes 35242 00 to 35249 81.

Establishments primarily engaged in manufacturing farm machinery and equipment are classified in industry 3523; hand lawn and garden shears and pruners in industry 3421 (Cutlery); and other garden handtools in industry 3423 (Hand and Edge Tools, N.E.C.).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The Lawn and Garden Equipment Industry is included for the first time in the census of manufactures for 1972. Old SIC industry 3522, Farm Machinery, has been divided into two new industries: Industry 3523, Farm Machinery and Equipment, and industry 3524, Lawn and Garden Equipment. The effects of SIC code changes between 1967 and 1972 can be seen in table 1C.

Value of shipments and other receipts of the Lawn and Garden Equipment Industry in 1972 totaled \$1,059 million. This included shipments of lawn and garden equipment

(primary products) valued at \$932 million, shipments of other products (secondary products) valued at \$106 million, and miscellaneous receipts (mainly resales) of \$21 million.

Shipments of lawn and garden equipment (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Shipments of lawn and garden equipment (primary products) from establishments classified in industry 3524 in 1972 represented 82 percent (coverage ratio) of these products valued at \$1,143 million shipped by all industries. Other industries shipping lawn and garden equipment consisted mainly of industry 3523, Farm Machinery and Equipment, (\$79 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3524, these establishments accounted for 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages								
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 3511	Industry 3519	Industry 3523	Industry 3524
1972.....	59	145	1,465	100
1967.....	20	129	(NA)	(NA)
1963.....	17	120	(NA)	(NA)

(NA) Not available.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more

TABLE 2A. General Statistics by Geographic Area: 1972 and 1967—Continued

(Footnotes for table 2A)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(NA) Not available.      (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records available to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

**TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967**

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	Other industries	Product code	Industry, class of products, and miscellaneous receipts	Other industries
	Listing of other industries with over \$2 million shipments of the primary products			Listing of other industries with over \$2 million shipments of the primary products--Continued

35240 00	Lawn and garden equipment, n.s.k. for establishments with 10 employees or more. (See note.).....		(X)	(X)	2.5	(X)	(X)	-

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The data present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series. The product detail as shown are those collected on the CIR form specified.

<sup>2</sup>The values reported for 1972 are as follows: Census of Manufactures, \$364.4 million (quantity not available); Annual form MA-36H, \$353.3 million for 649 units. Comparable data for 1967 are not available.

<sup>3</sup>Data reported on annual form MA-35L include basic engines (short block engines, primarily automotive type) shipped for conversion to marine or other nonautomotive uses. Such automotive gasoline engines are included with automotive parts and accessories (product class 37141) in the census of manufactures. Engines after conversion to nonautomotive uses are included in product class 35197.

<sup>4</sup>Product codes 35191 00, gasoline engines under 11 hp, etc., and 35192 00, gasoline engines, 11 hp and over, etc., are combined to avoid disclosing data for individual companies.

<sup>5</sup>Dual-fuel engines are included with diesel engines.

<sup>6</sup>Includes engines converted from purchased engines or from engines received from another plant of the same company.

<sup>7</sup>In 1967, data for product code 35232 10, Farm Dairy Machines, Sprayers and Dusters, Farm Elevators, and Farm Blowers, also included garden tractors and motor tillers. Data for garden tractors and motor tillers are product code 35242 00 in 1972 and amount to \$321.1 million. In 1967, this figure was \$196.8 million. The combined figure in 1967 was \$339.8 million.

<sup>8</sup>For 1972, product codes 35232 10, 35232 30, and 35232 50, Farm Dairy Machines, Sprayers and Dusters, Farm Elevators, and Farm Blowers, includes data for parts for farm elevators, product code 35239 98.

<sup>9</sup>For 1967, MA-35A total also includes parts for farm dairy machines and equipment.

<sup>10</sup>For 1967, product codes 35234 00, Harrows, Rollers, Pulverizers, Stalk Cutters, and Similar Equipment, and product code 35237 00, Plows and Lists, were not shown separately.

<sup>11</sup>In 1972, data for product code 35238 61, Windmill heads and windmill towers, are included with product code 35238 98, Other farm machines, equipment, and attachments.

<sup>12</sup>In 1967, data also include the value of parts for garden tractors, motor tillers, power hedge trimmers, and shears. Data for garden tractors, motor tillers, power hedge trimmers, and shears are included in industry 3524 in 1972.

<sup>13</sup>Also includes data for lawn and garden equipment, not specified by kind.

<sup>14</sup>In 1967, data for the products included in this product class were not collected separately. The total also includes the value of parts for farm machinery and wheel tractors. Therefore, the figure for 1967 is somewhat overstated.

<sup>15</sup>Data for 1972 for product code 35249 15, Parts for power hedge trimmers and shears (original equipment), are combined with product code 35249 81, Parts for power hedge trimmers and shears (for replacement and repair).

TABLE 6A-2. Quantity and Value of Shipments of Farm Machinery and Equipment: 1972 and 1967

1972 product code	Type of farm equipment	Unit of measure	Quantity	Value (\$1,000)

35230 81	Attachments.....		(X)	3,388
35239 89	Parts (replacement units only).....		(X)	2,897

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. Data for these products are included, however, in the totals. (S) Withheld because data did not meet publication standards on the basis of a consistency review. <sup>1</sup>Revised.

<sup>1</sup>Data are limited to attachments and parts shipped by companies manufacturing complete tractors.

<sup>2</sup>Grain drills and ground drive conveyor-type manure spreaders for 1972 are included in "other planting, seeding, and fertilizing machinery."

<sup>3</sup>Data for semimounted cutter-bar-type mowers (excluding combination mower-conditioners) and hay stacking attachments for loaders are included with "other haying machinery."

<sup>4</sup>Data for other power sprayers, over 4 gallons per minute, and hand-pulled and garden-type, 4 gallons per minute and under, all tank capacity, are included with "all other sprayers and dusters."

<sup>5</sup>Included with "other cultivators and weeder."

<sup>6</sup>Data for power corn shellers are combined with "other machines for preparing crops for market or for use."

<sup>7</sup>Respondents were requested to use the following definition: Batch dryers are defined as any dryer wherein the product to be dried is placed in the dryer, the complete drying and cooling operation performed, then the product removed to the place of storage or further processing. The term usually refers to dryers for small grain, seed, etc., which are self-contained machines comprising a drying compartment, either horizontal or vertical, to contain the product being dried while heated air is forced or drawn through it from a central portion (usually called a plenum chamber). Cooling is usually carried out in the same manner. Integral conveying equipment provides for loading and/or unloading the dryer. Also included are the fan, burner, and control system. Batch dryers are usually portable, but may be stationary.

<sup>8</sup>Respondents were requested to use the following definition: Continuous-flow dryers are defined as any dryer wherein the product to be dried is in continuous movement through the dryer and air movement is continuous, in contrast to batch operation.

<sup>9</sup>Respondents were requested to use the following definition: Heated-air units are defined as basic heated-air-producing units including fan, burner system, and electrical system. It is usually coupled to drying structure by means of a flexible duct. It may have transport chassis and wheels for portability.

<sup>10</sup>Included with "other farm poultry equipment."

<sup>11</sup>Included with "other hog equipment."

<sup>12</sup>Data for horizontal forage and grain silo unloaders are included with "other barn and barnyard equipment."

<sup>13</sup>For technical reasons, it was necessary to use codes in the 35230 series for products which are actually included by definition in product class 35238.

<sup>14</sup>The 1967 data for picker-shelliers (drawn, mounted, or self-propelled) and field shelling attachments for corn pickers, including conversion packages, are combined with "other harvesting machinery."

<sup>15</sup>Data for hay crusher or hay condition attachments are included in "other attachments."

TABLE 6A-3. Shipments of Garden Tractors and Motor Tillers: 1972 and 1967

35242 92						
35249 78	Parts for garden tractors.....	.....	(X)	19,644	(X)	7,775

(X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Data for "walking type garden tractors" have been excluded from all totals to avoid disclosure of individual companies.<sup>2</sup>Respondents were requested to use the following definition: Garden tractors are defined as tractors weighing less than 1,200 pounds (basic machines), typically powered by air-cooled engines with less than four cylinders and total piston displacement of under 45 cubic inches. Such tractors are further distinguished from farm tractors in that they usually carry an engine horsepower rating but not a belt horsepower rating.

TABLE 6A-4. Gasoline Engines (35191 and 35192), by Horsepower Rating: 1972 and 1967—Continued

(Footnotes for table 6A-4)

Note: Horsepower is defined as "maximum published horsepower rating at maximum recommended r.p.m."

<sup>1</sup>Represents total number of engines shipped or produced and incorporated into products at the same establishment.<sup>2</sup>These figures were derived rather than reported. Since fractional horsepower ratings were not used in this derivation (i.e., 4.8 hp. engines were treated as 4 hp.), the data are somewhat understated, primarily in the small engine size groups.<sup>3</sup>Represents engines produced and incorporated (in the same plant) into products such as construction machinery, farm machinery, tractors, engine-generator sets, and other products.<sup>4</sup>Data include basic engines (short block engines), primarily automotive type, shipped for conversion to marine or other nonautomotive uses. Of total engines shipped in 1972, gasoline engines shipped for conversion totaled 247,559. The comparable figure for 1967 is 137,388.

TABLE 6A-5. Nonautomotive Diesel Engines (35193), by Horsepower Rating: 1972 and 1967

<sup>1</sup>Represents total number of engines shipped or produced and incorporated into products at the same establishment.<sup>2</sup>These figures were derived rather than reported. Since fractional horsepower ratings were not used in this derivation (i.e., 9.8 hp. engines were treated as 9 hp.), the data are somewhat understated, primarily in the small engine groups.<sup>3</sup>Represents engines produced and incorporated (in the same plant) into products such as construction machinery, farm machinery, tractors, engine-generator sets, and other products.<sup>4</sup>Data include basic engines (short block engines), primarily automotive type, shipped for conversion to marine or other nonautomotive uses.<sup>5</sup>For 1972, includes a total of 74 dual-fuel engines produced, of which 33 units, valued at \$8.0 million, were shipped; for 1967, 73 units were produced, of which 32, valued at \$6.8 million, were shipped.

TABLE 6A-6. Automotive Diesel Engines (35194), by Horsepower Rating: 1972

Horsepower rating	Total engines <sup>1</sup>  (number)	Total horsepower <sup>2</sup>  (1,000)	Shipments and interplant transfers <sup>3</sup>		Produced and incorporated into products at the same establishment  (number)
			Quantity  (number)	Value, f.o.b. plant  (\$1,000)	
(As reported in Current Industrial Reports series MA-35L)	1972				
AUTOMOTIVE DIESEL ENGINES, TOTAL.....	180,036	50,192	180,036	632,323	
Under 151.....	}	8,840	1,514	8,840	17,069
151 to 200.....					
201 to 225.....		23,149	4,923	23,149	48,400
226 and over.....		148,047	43,755	148,047	566,854

Note: For 1967, data on automotive diesel engines by horsepower rating are not available.

- Represents zero.

<sup>1</sup>Represents total number of engines shipped or produced and incorporated into products at the same establishment.

<sup>2</sup>These figures were derived rather than reported.

<sup>3</sup>Shipments to other companies and interplant transfers are combined to avoid disclosing figures for individual companies.

TABLE 6A-7. Gas Engines (Except Automotive) Product Class (35196), by Horsepower Rating: 1972 and 1967

Horsepower rating	Total engines <sup>1</sup>	Total horsepower <sup>2</sup>	Shipments and interplant transfers <sup>3</sup>		Produced and incorporated into products at the same establishment <sup>4</sup>					
	(number)	(1,000)	Quantity (number)	Value, f.o.b. plant (\$1,000)						
(As reported in Current Industrial Reports series MA-35L)	1972

Under 21, 21 to 50, and 51 to 150.....	}	}	{	}	}					
151 to 500.....						12,318	1,751	5,042	7,936	2,382
501 and over.....						614	664	4,894	8,336	331
			283	5,599						

<sup>1</sup>Represents total number of engines shipped or produced and incorporated into products at the same establishment.

<sup>2</sup>These figures were derived rather than reported.

<sup>3</sup>Shipments to other companies and interplant transfers are combined to avoid disclosing figures for individual companies.

<sup>4</sup>Represents engines produced and incorporated (in the same plant) into products such as construction machinery, farm machinery, tractors, engine-generator sets, and other products.

<sup>5</sup>Data include basic engines (short block engines), primarily automotive type, shipped for conversion to marine or other nonautomotive uses.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)	
	1972	1967		1972	1967
LAWN MOWERS AND SNOW BLOWERS (35247)—Continued			PARTS FOR LAWN AND GARDEN EQUIPMENT, SOLD SEPARATELY (35249)—Continued

			Pacific Division.....	AA	(NA)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9      CC.....\$5.0 to \$9.9      FF.....\$20.0 to \$49.9  
BB.....\$2.0 to \$4.9      EE.....\$10.0 to \$19.9      GG.....\$50.0 and over

(NA) Not available.

<sup>1</sup>The individual product codes included in this class of product for 1972 differ significantly from the 1967 definition. Products shifting into or out of this class of product represent more than 15 percent of the total shipments value at the U.S. level.

<sup>2</sup>The individual product codes included in this class of product for 1972 differ significantly from the 1967 definition. Products shifting into or out of this class of product represent approximately 12 percent of the total 1967 shipments at the U.S. level.

<sup>3</sup>The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 2 percent of the total 1967 shipments at the U.S. level.

- Represents zero. (NA) Not available.

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

<sup>2</sup>Product class 35195 is combined with product class 35197 to avoid disclosing data for individual companies.

<sup>3</sup>The individual product codes included in this class of product for 1972 differ significantly from the prior years. Products shifting into or out of this class of product represent more than 15 percent of the total shipments value at the U.S. level.

<sup>4</sup>The individual product codes included in this class of product for 1972 differ from 1967 definition. Products shifting into or out of this class of product represent approximately 12 percent of the total 1967 shipments at the U.S. level.

<sup>5</sup>For years prior to 1967, parts were included with the individual product classes, whereas in 1967 parts are included in a separate product class 35239.

<sup>6</sup>In 1967, data for the products included in this product class were not collected separately. The total also includes the value of parts for farm machinery and wheel tractors.

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Includes cost for materials indicated by the symbol (D).<sup>2</sup>Excludes quantities produced and consumed in the same establishment.<sup>3</sup>This item represents the total cost of materials for establishments that did not report detailed materials data. Also includes estimates for companies that were not mailed report forms.<sup>4</sup>Represents estimates published in MC67(S)-5, Selected Materials Consumed, from data collected in a supplemental survey on form MA-131, Consumption of Materials, Parts, Containers, and Supplies, during 1967. This survey was limited to large establishments in selected chemical, machinery, and equipment industries and results in estimates which are subject to greater error than are the figures on materials consumption collected as a regular part of the census of manufactures.

TABLE 7B. Fuels and Electric Energy Consumed: 1971 and 1967

(See appendix, Explanation of Terms)

1972 code	Item	Unit of measure	1971		1967	
			Quantity	Cost (million dollars)	Quantity	Cost (million dollars)
	INDUSTRY 3511.--TURBINES AND TURBINE GENERATOR SETS					
	Purchased fuels and electric energy.....		(X)	14.5	(X)	10.3
	Purchased fuels, total.....		(X)	6.0	(X)	6.2

# EXPLANATORY TEXT

## CONSTRUCTION, MINING, AND MATERIALS HANDLING MACHINERY AND EQUIPMENT

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

- 3531—Construction Machinery and Equipment\*
- 3532—Mining Machinery and Equipment, Except Oilfield Machinery and Equipment\*
- 3533—Oilfield Machinery and Equipment\*
- 3534—Elevators and Moving Stairways
- 3535—Conveyors and Conveying Equipment
- 3536—Hoists, Industrial Cranes, and Monorail Systems\*
- 3537—Industrial Trucks, Tractors, Trailers, and Stackers\*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

### INDUSTRY 3531.—CONSTRUCTION MACHINERY (Short Title)

This industry comprises establishments primarily engaged in manufacturing heavy machinery and equipment used by the construction industries, such as bulldozers, concrete mixers, cranes except industrial-plant type, dredging machinery, pavers, and power shovels.

Establishments primarily engaged in manufacturing mining equipment are classified in industry 3532 and well-drilling machinery in industry 3533.

For a detailed list of products of industry 3531, refer to table 6A, product codes 35312 07 to 35319 98.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been slightly changed from the previous classification system. Well point systems, formerly included in industry 3533, Mining Machinery, are now included in this industry.

Value of shipments and other receipts of the Construction Machinery Industry in 1972 totaled \$6,091 million. This included shipments of construction machinery (primary products) valued at \$5,246 million, shipments of other products (secondary products) valued at \$575 million, and miscellaneous receipts (mainly resales) of \$270 million.

Shipments of construction machinery (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 88 percent. Secondary products shipped by this industry in 1972 consisted mainly of motor vehicle parts and accessories (\$62 million) and mining machinery (\$46 million).

Shipments of construction machinery (primary products) from establishments classified in industry 3531 in 1972 represented 93 percent (coverage ratio) of these products valued at \$5,654 million shipped by all industries. In 1967, the coverage ratio was 92 percent. Other industries shipping construction machinery consisted mainly of industry 3523, Farm Machinery and Equipment (\$127 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3531, these establishments accounted for less than 1 percent of value of shipments.

### INDUSTRY 3532.—MINING MACHINERY (Short Title)

This industry comprises establishments primarily engaged in manufacturing heavy machinery and equipment used by the mining industries, such as coal breakers, mine cars, mineral cleaning machinery, concentration machinery, core drills, coal cutters, portable rock drills, and rock crushing machinery.

---

\*Note that the "short title" for this industry is used throughout the report.

Establishments primarily engaged in manufacturing construction machinery are classified in industry 3531; well drilling machinery in industry 3533; and coal and ore conveyors in industry 3535.

For a detailed list of products of industry 3532, refer to table 6A, product codes 35324 25 to 35324 75.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Mining Machinery Industry in 1972 totaled \$771 million. This included shipments of mining machinery (primary products) valued at \$592 million, shipments of other products (secondary products) valued at \$92 million, and miscellaneous receipts (mainly resales) of \$88 million.

Shipments of mining machinery (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 78 percent. Secondary products shipped by this industry in 1972 consisted mainly of construction machinery (\$33 million).

Shipments of mining machinery (primary products) from establishments classified in industry 3532 in 1972 represented 81 percent (coverage ratio) of these products valued at \$730 million shipped by all industries. In 1967, the coverage ratio was 82 percent. Other industries shipping mining machinery and equipment consisted mainly of industry 3531, Construction Machinery (\$46 million) and industry 3533, Oilfield Machinery (\$23 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3532, these establishments accounted for 1 percent of value of shipments.

#### **INDUSTRY 3533.—OILFIELD MACHINERY (Short Title)**

This industry comprises establishments primarily engaged in manufacturing machinery and equipment for use in oilfields and gasfields or for drilling water wells. For a detailed list of products of industry 3533, refer to table 6A, product codes 35331 11 to 35334 31.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been slightly changed from the previous classification system. Well-point systems previously included in this industry are now classified in industry 3531, Construction Machinery.

Value of shipments and other receipts of the Oilfield Machinery Industry in 1972 totaled \$1,207 million. This included shipments of oilfield machinery (primary products) valued at \$905 million, shipments of other products (secondary products) valued at \$198 million, and miscellaneous receipts (mainly resales) of \$105 million.

Shipments of oilfield machinery (primary products) in 1972 represented 82 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent. Secondary products shipped by this industry in 1972 consisted mainly of valves and pipe fittings (\$44 million) and pumps and pumping equipment (\$24 million).

Shipments of oilfield machinery (primary products) from establishments classified in industry 3533 in 1972 represented 92 percent (coverage ratio) of these products valued at \$980 million shipped by all industries. In 1967, the coverage ratio was also 92 percent. Other industries shipping oilfield machinery and equipment consisted mainly of industry 3494, Valves and Pipe Fittings (\$12 million) and industry 3561, Pumps and Pumping Equipment (\$8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3533, these establishments accounted for 1 percent of value of shipments.

#### **INDUSTRY 3534.—ELEVATORS AND MOVING STAIRWAYS**

This industry comprises establishments primarily engaged in manufacturing passenger or freight elevators, automobile lifts, dumbwaiters, and moving stairways.

Establishments primarily engaged in manufacturing commercial conveyor systems and equipment are classified in industry 3535 and farm elevators in industry 3523.

For a detailed list of products of industry 3534, refer to table 6A, product codes 35340 05 to 35340 97.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Elevators and Moving Stairways Industry in 1972 totaled \$484 million. This included shipments of elevators and moving stairways (primary products) valued at \$395 million, shipments of other products (secondary products) valued at \$13 million, and miscellaneous receipts of \$76 million.

Shipments of elevators and moving stairways (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 94 percent.

Shipments of elevators and moving stairways (primary products) from establishments classified in industry 3534 in 1972 represented 96 percent (coverage ratio) of these products valued at \$412 million shipped by all industries. In 1967, the coverage ratio was 95 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3534, these establishments accounted for less than 1 percent of value of shipments.

#### INDUSTRY 3535.—CONVEYORS AND CONVEYING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing conveyors and conveying equipment for installation in factories, warehouses, mines, and other industrial and commercial establishments.

Establishments primarily engaged in manufacturing passenger or freight elevators, dumbwaiters, and moving stairways are classified in industry 3534, and overhead traveling cranes and monorail systems are classified in industry 3536.

For a detailed list of products of industry 3535, refer to table 6A, product codes 35351 11 to 35352 11.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Conveyors and Conveying Equipment Industry in 1972 totaled \$970 million. This included shipments of conveyors and conveying equipment (primary products) valued at \$730 million, shipments of other products (secondary products) valued at \$83 million, and miscellaneous receipts (mainly resales) of \$156 million.

Shipments of conveyors and conveying equipment (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent. Secondary products shipped by this industry in 1972 consisted mainly of special industry machinery, n.e.c. (\$7 million), hoists, cranes, and monorails (\$6 million), and industrial trucks and tractors (\$6 million).

Shipments of conveyors and conveying equipment (primary products) from establishments classified in industry 3535 in 1972 represented 88 percent (coverage ratio) of these products valued at \$826 million shipped by all industries. In 1967, the coverage ratio was 83 percent. Other industries shipping conveyors and conveying equipment consisted mainly of industry 3531, Construction Machinery (\$13 million), industry 3568, Power Transmission Equipment, N.E.C. (\$8 million), and industry 3559, Special Industry Machinery, N.E.C. (\$6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3535, these establishments accounted for 1 percent of value of shipments.

#### INDUSTRY 3536.—HOISTS, CRANES, AND MONORAILS (Short Title)

This industry comprises establishments primarily engaged in manufacturing overhead traveling cranes, hoists, and monorail systems for installation in factories, warehouses, and other industrial and commercial establishments. For a detailed list of products of industry 3536, refer to table 6A, product codes 35361 11 to 35362 57.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been slightly changed from the previous classification system by the inclusion of automatic stacking machines and other parts and attachments. These products were formerly classified in industry 3537, Industrial Trucks and Tractors.

Value of shipments and other receipts of the Hoists, Cranes, and Monorails Industry in 1972 totaled \$527 million. This included shipments of hoists, cranes, and monorails (primary products) valued at \$376 million, shipments of other products (secondary products) valued at \$104 million, and miscellaneous receipts (mainly receipts for repair work) of \$48 million.

Shipments of hoists, cranes, and monorails (primary products) in 1972 represented 78 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 78 percent. Secondary products shipped by this industry in 1972 consisted mainly of construction machinery (\$41 million) and general industrial machinery, n.e.c. (\$8 million).

Shipments of hoists, cranes, and monorails (primary products) from establishments classified in industry 3536 in 1972 represented 84 percent (coverage ratio) of these products

valued at \$446 million shipped by all industries. In 1967, the coverage ratio was 83 percent. Other industries shipping hoists, cranes, and monorails consisted mainly of industry 3531, Construction Machinery (\$12 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3536, these establishments accounted for 1 percent of value of shipments.

#### **INDUSTRY 3537.—INDUSTRIAL TRUCKS AND TRACTORS (Short Title)**

This industry comprises establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, stackers (truck type), and related equipment used for handling materials on floors and paved surfaces in and around industrial and commercial plants, depots, docks, and terminals.

Establishments primarily engaged in manufacturing motor vehicles and motor-vehicle-type trailers are classified in SIC group 371; farm-type wheel tractors in industry 3523; wheel-tractor shovel loaders and tracklaying tractors in industry 3531; and wood pallets and skids in industry 2448.

For a detailed list of products of industry 3537, refer to table 6A, product codes 35371 11 to 35372 83.

The code number for this industry in the 1972 revision of the SIC is unchanged. However, the content of the industry

has been slightly changed from the previous classification system to exclude automatic stackers and parts and attachments for automatic stackers now classified in industry 3536, Hoists, Cranes, and Monorails.

Value of shipments and other receipts of the Industrial Trucks and Tractors Industry in 1972 totaled \$1,035 million. This included shipments of industrial trucks and tractors (primary products) valued at \$916 million, shipments of other products (secondary products) valued at \$42 million, and miscellaneous receipts (mainly resales) of \$77 million.

Shipments of industrial trucks and tractors (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of construction machinery (\$13 million).

Shipments of industrial trucks and tractors (primary products) from establishments classified in industry 3537 in 1972 represented 91 percent (coverage ratio) of these products valued at \$1,005 million shipped by all industries. In 1967, the coverage ratio was 86 percent. Other industries shipping industrial trucks and tractors consisted mainly of industry 3531, Construction Machinery (\$26 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3537, these establishments accounted for 1 percent of value of shipments.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 3531	Industry 3532	Industry 3533	Industry 3534	Industry 3535	Industry 3536	Industry 3537
1972.....	644	220	257	135	457	176	363
1967.....	578	197	309	130	416	139	337
1963.....	561	198	373	126	428	120	304

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

<sup>2</sup>In industry 3534, the figures for 1967 and later years are not comparable with those in earlier years because some companies included construction receipts with value of shipments in 1966 and prior years. Value added by manufacture and value of shipments for 1967 would have been \$50 million to \$75 million higher had they been on a comparable basis with earlier years.

<sup>3</sup>The SIC number and title are unchanged for industry 3536. However, the content of this industry has been changed slightly by the inclusion of automatic stacking machines and other parts and attachments. The effect of the change is estimated to be approximately 4 percent of the total value of shipments for industry 3536 for 1972.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more			
	(number)	(number)				(1,000)	(million dollars)			
New industry 3536.--Hoists, Cranes, and Monorails <sup>1</sup> .....	188	92	16.3	274.7	527.3	(X)	(X)	(X)	(X)	(X)
Old industry 3536.--Hoists, Cranes, and Monorails.....	177	83	15.7	263.1	503.5	177	83	15.7	263.1	503.5
Old industry 3537.--Industrial Trucks and Tractors.....	11	9	.6	11.6	23.8	-	-	-	-	-

- Represents zero. (X) Not applicable.

<sup>1</sup>See footnote 3, table 1A.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(See appendix, Explanation of Terms)

Industry and geographic area	1972											1967	
	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees <sup>1</sup>	Value added by manufacture
	Total	With 20 employees or more	Number <sup>1</sup>	Payroll	Number	Man-hours	Wages						
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent  
E2--20 to 29 percent

E3--30 to 39 percent  
E4--40 to 49 percent

E5--50 to 59 percent  
E6--60 to 69 percent

E7--70 to 79 percent  
E8--80 to 89 percent

E9--90 to 99 percent  
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

## TABLE 3. Detailed Statistics: 1972

(See appendix, Explanation of Terms)

[illegible]

<sup>1</sup>The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

<sup>2</sup>The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

## TABLE 4. General Statistics, by Employment Size of Establishment: 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:  
1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

**TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:**  
1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number	Peyroll	Number	Man-hours	Wages				
			(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)

(D) Withheld to avoid disclosing figures for individual companies.

**TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967**

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscellaneous receipts	Primary product specialization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio
										Col. B Col. F
		(million dollars)	(million dollars)	(million dollars)	(million dollars)	Col. B Col. B & C (percent)	(million dollars)	(million dollars)	(million dollars)	(percent)

	.....1967..	778.0	672.4	49.8	55.8	93	780.7	672.4	108.3	86

<sup>1</sup>In industry 3534, the figures for 1967 and later years are not comparable with those in earlier years because some companies included construction receipts with value of shipments in 1966 and prior years. Value added by manufacture and value of shipments for 1967 would have been \$50 million to \$75 million higher had they been on a comparable basis with earlier years.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Construction machinery (SIC 3531)	Mining machinery (SIC 3532)	Oilfield machinery (SIC 3533)	Elevators and moving stairways (SIC 3534)	Conveyors and conveying equipment (SIC 3535)	Hoists, cranes, and monorails (SIC 3536)	Industrial trucks and tractors (SIC 3537)	Other industries

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	Other industries	Product code	Industry, class of products, and miscellaneous receipts	Other industries
	Listing of the other industries with over \$2 million shipments of the primary products--Continued			Listing of the other industries with over \$2 million shipments of the primary products--Continued	
3534	3586- Measuring and dispensing pumps.....	(5-10)	3536	3443- Fabricated platework (boiler shops).....	3.7 (5-10)

TABLE 6A-1. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

1972 product code	Product	Unit of measure	Total product shipments including interplant transfers			
			1972		1967	
			Quantity	Value (million dollars)	Quantity	Value (million dollars)
3533- --	OILFIELD MACHINERY--Continued					
35332 --	Other Oilfield and Gasfield Drilling Machinery and Equipment.....		(X)	87.0	(X)	43.5
35332 31	Cable tool drilling machinery and equipment (including both surface and subsurface equipment.).....		(X)	( <sup>11</sup> )	(X)	5.7
35332 51	Cementing, floating, guiding, and shoe equipment: Guide shoes, float collars, and combination guide and float shoes.....		(X)	8.6	(X)	8.4
35332 55	Other cementing equipment.....		(X)	12.6	(X)	9.9
35332 61	Parts for oilfield and gasfield drilling equipment sold separately, except parts for portable drilling rigs.....		(X)	22.9	(X)	13.7
35332 98	Other oilfield and gasfield drilling equipment, except portable.		(X)	<sup>11</sup> 42.9	(X)	5.8
35333 --	Oilfield and Gasfield Production Machinery and Equipment (Except Pumps.).....		(X)	376.5	(X)	260.5
35333 11	Flowing well equipment, surface and subsurface: Christmas tree assemblies.....		(X)	23.5	(X)	28.4
35333 13	Casing and tubing heads and supports.....		(X)	4.3	(X)	10.9
35333 15	Chokes, manifolds, and other accessories.....		(X)	10.0	(X)	15.4
35333 19	Rodless oil lifting machinery and equipment (except pumps)....		(X)	33.4	(X)	23.8
	Rod lifting machinery and equipment, surface, including pumps when they are components of a complete assembly:					
35333 53	Pumping units and accessories, including back crank equipment.	Units.....	( <sup>12</sup> )	( <sup>12</sup> )	6,089	28.8
35333 55	Other surface rod lifting machinery and equipment.....		(X)	6.5	(X)	1.6
35333 57	Rod lifting equipment, subsurface, except pumps.....	1,000 sucker rods.	(NA)	24.2	1,577	20.7
	Other production machinery and equipment:					
35333 61	Packers.....		(X)	57.5	(X)	38.7
35333 65	Screens, tubing, catchers, etc.....		(X)	8.1	(X)	11.0
35333 71	Oil and gas separating, metering, and treating equipment.....	1,000 separa- tors.	20	45.2	21	16.1
35333 81	Parts for oilfield and gasfield machinery and tools, sold separately, including parts for portable drilling rigs but excluding parts for other drilling equipment.....		(X)	39.3	(X)	11.2
35333 98	Other oilfield and gasfield production machinery and tools.....		(X)	<sup>12</sup> 121.5	(X)	38.8
35333 00	Oilfield and gasfield production machinery and equipment (except pumps), n.s.k.....		(X)	3.0	(X)	15.0
35334 --	Other Oilfield and Gasfield Machinery and Tools (Except Pumps), Including Waterwell.....		(X)	113.6	(X)	65.4
	Portable drilling rigs, permanently mounted on truck or trailer: Oilfield and gasfield:					
35334 11	Cable tool.....	Units.....	140	7.2	( <sup>13</sup> )	( <sup>13</sup> )
35334 13	Rotary rigs.....	do.....	(NA)	39.1	165	9.2
	Waterwell and blasthole:					
35334 15	Cable tool.....	do.....	(NA)	1.0	<sup>13</sup> 274	<sup>13</sup> 6.5
35334 17	Rotary rigs.....	do.....	285	16.2	100	4.8
35334 21	Derricks, oilfield and gasfield, substructures, and accessories--regular and portable (including equipment shipped "knocked down" and assembled on the site.).....	do.....	(NA)	34.0	(NA)	25.3
35334 31	Well surveying machinery and equipment.....		(X)	8.9	(X)	13.1
35334 00	Other oilfield and gasfield machinery and tools (except pumps), including waterwell, n.s.k.....		(X)	7.2	(X)	6.6
35330 00	Oilfield machinery, n.s.k., for establishments with 10 employees or more. (See note.).....		(X)	44.1	(X)	44.9
35330 02	Oilfield machinery, n.s.k., for establishments with less than 10 employees. (See note.).....		(X)	10.6	(X)	3.0
3534- --	ELEVATORS, AND MOVING STAIRWAYS, TOTAL.....		(X)	412.2	(X)	295.9
	Elevators, except farm and portable: Electric passenger, except residence lifts:					
35340 05	Gearless.....	Units.....	6,263	96.1	6,385	116.0
35340 07	Gearless.....	do.....	2,116	78.0		
35340 12	Hydraulic passenger.....	do.....	4,713	45.2	2,723	21.0
35340 13	Electric freight.....	do.....	523	5.8	856	7.1
35340 15	Hydraulic freight.....	do.....	1,195	15.6	1,685	9.5
35340 31	Automobile lifts (service station and garage type).....	do.....	46,004	33.1	45,178	26.6
35340 51	Moving stairways and escalators.....	do.....	993	24.4	732	14.4
35340 96	Other nonfarm elevators, including sidewalk elevators, dumb waiters, man lifts, hand-operated freight elevators, residence lifts, etc.....		(X)	30.4	(X)	16.8
35340 97	Parts and attachments for elevators and moving stairways (sold separately).....		(X)	42.3	(X)	56.0
35340 00	Elevators and moving stairways, n.s.k., for establishments with 10 employees or more. (See note.).....		(X)	39.0	(X)	26.4
35340 02	Elevators and moving stairways, n.s.k., for establishments with less than 10 employees. (See note.).....		(X)	2.3	(X)	2.1

See footnotes at end of table.

TABLE 6A-1. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

35372 83	Parts and attachments for industrial trucks and tractors and miscellaneous materials handling equipment (except for automatic stacking machines) <sup>18</sup> .....		(X)	171.4	(X)	<sup>17</sup> 165.5
35370 00	Industrial trucks and tractors, n.s.k., for establishments with 10 employees or more. (See note.).....		(X)	90.3	(X)	73.8
35370 02	Industrial trucks and tractors, n.s.k., for establishments with less than 10 employees. (See note.).....		(X)	13.6	(X)	6.2

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. (NA) Not available.

<sup>1</sup>See table 6A-3 for detailed product data.

<sup>2</sup>See table 6A-4 for detailed product data.

<sup>3</sup>See tables 6A-4 and 6A-5 for detailed product data.

<sup>4</sup>See table 6A-2 for detailed product data.

<sup>5</sup>See tables 6A-2 and 6A-3 for detailed product data.

<sup>6</sup>See table 6A-5 for detailed product data.

<sup>7</sup>1972 data for product codes 35319 05, Four-wheel drive, skid steer, loaders; and 35319 25, Well point systems, are included with product code 35319 83, Other excavating and road construction machinery, etc.

<sup>8</sup>1967 data for product code 35319 05, Four-wheel drive, skid steer, loaders, are included in product code 35319 83.

<sup>9</sup>See table 6A-6 for detailed product data from survey MA-35F.

<sup>10</sup>1972 data for product code 35331 43, Coring equipment, included with product code 35331 49, Other subsurface rotary drilling equipment, etc.

<sup>11</sup>1972 data for product code 35332 31, Cable tool drilling machinery and equipment, are included with product code 35332 98, Other oilfield and gasfield drilling equipment, except portable.

<sup>12</sup>1972 data for product code 35333 53, Pumping units and accessories, etc., are included with product code 35333 98, Other oilfield and gasfield production machinery and tools.

<sup>13</sup>1967 data for product code 35334 11, Oilfield and gasfield cable tools, are included with product code 35334 15, Water well and blasthole cable tools.

<sup>14</sup>1967 data excluded automatic stacking machines and parts and attachments for these machines.

<sup>15</sup>Data for product code 35361 14, Mineshaft and slope electric wire rope hoists, are included with product code 35361 38, Other hoists.

<sup>16</sup>1972 data for product code 35362 41, Automatic stacking machines, includes data for product code 35362 57, Parts and attachments for automatic stacking machines. For 1967, data for these products were included in industry 3537 and were not available separately.

<sup>17</sup>Data for automatic stackers and parts and attachments for automatic stackers were included in this industry in 1967 but were not shown separately. Effective in 1972, these products are moved to industry 3536, Hoists, Cranes, and Monorails, and their value of shipments is \$26.7 million.

<sup>18</sup>The product class structure in this industry has been significantly changed effective in 1972.

TABLE 6A-2. Quantity and Value of Shipments of Power Cranes and Shovels and Other Selected Construction Machinery: 1972 and 1967

1972 product code	Product	Unit of measure	Quantity	Value (\$1,000)
			1972	
	Power Cranes, Draglines, and Shovels (Excavators), Including Mine Shovels, but Not Including Equipment for Mounting on Tractors, Total.....	Number units.....	11,503	748,781

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing the operations of individual companies.

<sup>1</sup>Totals include the value of products withheld to avoid disclosing figures for individual companies.

<sup>2</sup>Represents wheeled tractors designed primarily to be used as towing units for scrapers, trailers, wagons, and similar types of towed equipment for use on natural terrain but restricted by State laws or regulations from operating on public highways.

<sup>3</sup>Machines shipped primarily as independent dozing or pushing units characterized with approximate equal weight distribution fore and aft with all-wheel drive as differentiated from machines designed for integral hookup towing.

<sup>4</sup>Excludes value of prime mover when sold with machine.

<sup>5</sup>1967 data for "other aggregate processing plants" (code 35319 45, "under 150 tons per hour"; and code 35319 47, "150 tons per hour and over") have been withheld. It has been determined that plants reported in these categories are of the stationary type and are included in Current Industrial Reports series MA-35F, Mining Machinery.

<sup>6</sup>Excludes front-end loaders shipped to producers of complete tractor-shovel loaders (integral units).

<sup>7</sup>Represents vehicles normally operating off the public highway and specifically designed to transport materials and property; or equipment on mining, construction, logging, petroleum developments, and similar projects. These vehicles are of such weight as to be normally restricted by State law or regulation from operating on public highways.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

(Footnotes for table 6B)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9  
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9  
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9  
GG.....\$50.0 and over

- Represents zero. (NA) Not available.

<sup>1</sup>No 1967 geographic data were published for this product class.

<sup>2</sup>The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into this class of products represent approximately 10 percent of the total 1967 shipments at the U.S. level.

<sup>3</sup>See table 6A-1, footnote 16.

<sup>4</sup>See table 6A-1, footnote 18.

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

<sup>2</sup>Parts (for replacement and repair) and attachments for wheel-type tractor shovel loaders and for tracklaying-type tractor shovel loaders are included in product 35319 for 1958.

<sup>3</sup>Source: Current Industrial Reports series M35D, "Construction Machinery," and M35S, "Tractors (Except Garden Tractors)." These data exclude the value of parts and attachments for wheel-type shovel loaders and for tracklaying-type shovel loaders.

<sup>4</sup>The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 10 percent of the total 1967 shipments at the U.S. level.

<sup>5</sup>See table 6A-1, footnote 16.

<sup>6</sup>See table 6A-1, footnotes 17 and 18.

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.  
(Z) Less than half of the unit of measurement shown.

<sup>1</sup>These figures are understated by \$10 million or less because of apparent undercoverage of carbon steel pipe and tube.

<sup>2</sup>Excludes quantities produced and consumed in the same establishment.

<sup>3</sup>Includes cost for materials indicated by the symbol (D).

<sup>4</sup>This item represents the total cost of materials for establishments that did not report detailed materials data. Also includes estimates for companies that were not mailed report forms.

<sup>5</sup>These figures are understated by \$5 million or less because of apparent undercoverage of carbon steel pipe and tube.

TABLE 7B. Fuels and Electric Energy Consumed: 1971 and 1967

(See appendix, Explanation of Terms)

# EXPLANATORY TEXT

## METALWORKING MACHINERY AND EQUIPMENT

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

- 3541—Machine Tools, Metal-Cutting Types**
- 3542—Machine Tools, Metal-Forming Types**
- 3544—Special Dies and Tools, Die Sets, Jigs and Fixtures, and Industrial Molds\***
- 3545—Machine Tool Accessories and Measuring Devices\***
- 3546—Power-Driven Handtools**
- 3547—Rolling Mill Machinery and Equipment\***
- 3549—Metalworking Machinery, N.E.C.**

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## INDUSTRY 3541.—MACHINE TOOLS, METAL-CUTTING TYPES

This industry comprises establishments primarily engaged in manufacturing machines, not supported in the hands of an operator when in use, that shape metal by cutting or use of electrical techniques; the rebuilding of such machine tools; and the manufacture of replacement parts for them. Metalworking, or primarily metalworking, machine tools designed primarily for home workshops are also included. For a detailed list of products of industry 3541, refer to table 6A, product codes 35411 00 to 35419 41.

\* Note that the "short title" for this industry is used throughout the report.

Establishments primarily engaged in manufacturing electric welding equipment are classified in industry 3623 (Welding Apparatus, Electric); portable power-driven handtools, in industry 3546; and gas welding and cutting equipment and automotive maintenance equipment are classified in industry 3549.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Machine Tools, Metal-Cutting Types, Industry in 1972 totaled \$1,418 million. This included shipments of machine tools, metal-cutting types, (primary products) valued at \$1,136 million, shipments of other products (secondary products) valued at \$189 million, and miscellaneous receipts (mainly resales and contract work) of \$94 million.

Shipments of machine tools, metal-cutting types, (primary products) in 1972 represented 86 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 86 percent.

Shipments of machine tools, metal-cutting types, (primary products) from establishments classified in industry 3541 in 1972 represented 90 percent (coverage ratio) of these products valued at \$1,258 million shipped by all industries. In 1967, the coverage ratio was also 90 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3541, these establishments accounted for 3 percent of value of shipments.

## INDUSTRY 3542.—MACHINE TOOLS, METAL-FORMING TYPES

This industry comprises establishments primarily engaged in manufacturing machines, not supported in the hands of an operator while in use, for pressing, hammering, extruding, shearing, diecasting, or otherwise forming metal into shape. This industry also includes establishments primarily engaged in

rebuilding such machine tools and manufacturing repair parts for them. For a detailed list of products of industry 3542, refer to table 6A, product codes 35421 10 to 35424 75.

Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623 (Welding Apparatus, Electric); portable power-driven hand-tools in industry 3546; rolling-mill machinery and equipment in industry 3547; and gas welding and cutting equipment and automotive maintenance equipment in industry 3549.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Machine Tools, Metal-Forming Types, Industry in 1972 totaled \$694 million. This included shipments of machine tools, metal forming types, (primary products) valued at \$581 million, shipments of other products (secondary products) valued at \$73 million, and miscellaneous receipts (mainly resales and receipts for repair work) of \$40 million.

Shipments of machine tools, metal-forming types, (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent.

Shipments of machine tools, metal-forming types, (primary products) from establishments classified in industry 3542 in 1972 represented 87 percent (coverage ratio) of these products valued at \$670 million shipped by all industries. In 1967, the coverage ratio was 84 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3542, these establishments accounted for 2 percent of value of shipments.

#### **INDUSTRY 3544.—SPECIAL DIES, TOOLS, JIGS, AND FIXTURES (Short Title)**

This industry comprises establishments, commonly known as contract tool and die shops, primarily engaged in manufacturing, on a job or order basis, special tools and fixtures for use with machine tools, hammers, diecasting machines, and presses. The products of establishments classified in this industry include a wide variety of special toolings such as dies;

punches; die sets and components, and subpresses; jigs and fixtures; and special checking devices. Establishments primarily engaged in manufacturing molds for diecasting and foundry casting, metal molds for plasterworking, rubber working, plastic working, glassworking, and similar machinery are also included. For a detailed list of products of industry 3544, refer to table 6A, product codes 35441 13 to 35442 63.

Establishments primarily engaged in manufacturing molds for heavy steel ingots are classified in industry 3321 (Gray Iron Foundries).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Special Dies, Tools, Jigs, and Fixtures, Industry in 1972 totaled \$2,427 million. This included shipments of special dies, tools, jigs, and fixtures (primary products) valued at \$2,106 million, shipments of other products (secondary products) valued at \$129 million, and miscellaneous receipts (mainly contract work and resales) of \$192 million.

Shipments of special dies, tools, jigs, and fixtures (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent.

Shipments of special dies, tools, jigs, and fixtures (primary products) from establishments classified in industry 3544 in 1972 represented 78 percent (coverage ratio) of these products valued at \$2,714 million shipped by all industries. In 1967, the coverage ratio was 74 percent. Other industries shipping special dies, tools, jigs, and fixtures consisted mainly of industry 3465, Automotive Stampings, (\$187 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3544, these establishments accounted for 18 percent of value of shipments.

#### **INDUSTRY 3545.—MACHINE TOOL ACCESSORIES (Short Title)**

This industry comprises establishments primarily engaged in manufacturing cutting tools, machinists' precision measuring

tools, and attachments and accessories for machine tools and for other metalworking machinery, not elsewhere classified. For a detailed list of products of industry 3545, refer to table 6A, product codes 35451 13 to 35453 51.

Establishments primarily engaged in manufacturing handtools, except power-driven types, are classified in SIC group 342 (Cutlery, Handtools, and Hardware).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Machine Tool Accessories Industry in 1972 totaled \$1,249 million. This included shipments of machine tool accessories (primary products) valued at \$1,008 million, shipments of other products (secondary products) valued at \$165 million, and miscellaneous receipts (mainly resales) of \$76 million.

Shipments of machine tool accessories (primary products) in 1972 represented 86 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent.

Shipments of machine tool accessories (primary products) from establishments classified in industry 3545 in 1972 represented 88 percent (coverage ratio) of these products valued at \$1,151 million shipped by all industries. In 1967, the coverage ratio was 85 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3545, these establishments accounted for 7 percent of value of shipments.

#### INDUSTRY 3546.—POWER-DRIVEN HANDTOOLS

This industry comprises establishments primarily engaged in manufacturing power-driven handtools such as drills and drilling tools, pneumatic and snagging grinders, and electric hammers. For a detailed list of products of industry 3546, refer to table 6A, product codes 35461 01 to 35462 61.

Establishments primarily engaged in manufacturing automotive maintenance equipment are classified in industry 3549; those primarily manufacturing machine tools for metal cutting and metal forming (including home workshop tools) which are not supported in the hands of an operator are classified in

industries 3541 and 3542; and those primarily manufacturing power-driven heavy construction or mining handtools in SIC group 353 (Construction and Related Machinery).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

In 1972, industry 3546 is presented as a separate industry for the first time; it was part of industry 3548 in previous years. Industry 3548 as defined by the classification system followed in the 1967 census was split, as a result of changes incorporated in the 1972 edition of the SIC manual, into three separate industries: 3546, Power-Driven Handtools; 3547, Rolling Mill Machinery; and 3549, Metalworking Machinery, N.E.C.

Value of shipments and other receipts of the Power-Driven Handtools Industry in 1972 totaled \$730 million. This included shipments of power-driven handtools (primary products) valued at \$571 million, shipments of other products (secondary products) valued at \$127 million, and miscellaneous receipts (mainly resales) of \$32 million.

Shipments of power-driven handtools (primary products) in 1972 represented 82 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Shipments of power-driven handtools (primary products) from establishments classified in industry 3546 in 1972 represented 92 percent (coverage ratio) of these products valued at \$623 million shipped by all industries. Other industries shipping power-driven handtools consisted mainly of industry 3315, Steel Wire and Related Products, (\$25 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3546, these establishments accounted for less than 1 percent of value of shipments.

#### INDUSTRY 3547.—ROLLING MILL MACHINERY (Short Title)

This industry comprises establishments primarily engaged in manufacturing rolling mill machinery and processing equipment for metal production, such as cold forming mills, structural mills, and finishing equipment. For a detailed list of products of industry 3547, refer to table 6A, product codes 35471 11 to 35473 53.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding

structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

In 1972, this industry is presented as a separate industry for the first time; in prior years it was part of industry 3548. Industry 3548 as defined by the classification system followed in the 1967 census was split, as a result of changes incorporated in the 1972 edition of the SIC manual, into three separate industries: 3546, Power-Driven Handtools; 3547, Rolling Mill Machinery; and 3549, Metalworking Machinery, N.E.C.

Value of shipments and other receipts of the Rolling Mill Machinery Industry in 1972 totaled \$328 million. This included shipments of rolling mill machinery (primary products) valued at \$212 million, shipments of other products (secondary products) valued at \$74 million, and miscellaneous receipts (mainly contract work and resales) of \$41 million.

Shipments of rolling mill machinery (primary products) in 1972 represented 74 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Shipments of rolling mill machinery (primary products) from establishments classified in industry 3547 in 1972 represented 86 percent (coverage ratio) of these products valued at \$248 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3547, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3549.—METALWORKING MACHINERY, N.E.C.**

This industry comprises establishments primarily engaged in manufacturing metalworking machinery, not elsewhere classified, such as gas cutting and welding equipment, wire fabricating machinery and equipment, except wiredrawing dies, and automotive maintenance machinery and equipment. For a detailed list of products of industry 3549, refer to table 6A, product codes 35493 11 to 35495 98.

Establishments primarily engaged in manufacturing metal-cutting machine tools are classified in industry 3541; metal-forming machine tools in industry 3542; power-driven handtools in industry 3546; and rolling mill machinery in industry 3547.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

In 1972, this industry is presented as a separate industry for the first time; in prior years it was part of industry 3548. Industry 3548 as defined by the classification system followed in the 1967 census was split, as a result of changes incorporated in the 1972 edition of the SIC manual, into three separate industries: 3546, Power-Driven Handtools; 3547, Rolling Mill Machinery; and 3549, Metalworking Machinery, N.E.C.

Value of shipments and other receipts of the Metalworking Machinery, N.E.C., Industry in 1972 totaled \$428 million. This included shipments of metalworking machinery, n.e.c., (primary products) valued at \$342 million, shipments of other products (secondary products) valued at \$48 million, and miscellaneous receipts (mainly resales and contract work) of \$38 million.

Shipments of metalworking machinery, n.e.c., (primary products) in 1972 represented 88 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Shipments of metalworking machinery, n.e.c., (primary products) from establishments classified in industry 3549 in 1972 represented 83 percent (coverage ratio) of these products valued at \$411 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3549, these establishments accounted for 11 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	1972 industry	1972 industry	1972 industry	1972 industry	1972 industry	1972 industry	1972 industry	1967 industry
	3541	3542	3544	3545	3546	3547	3549	3548
1972.....	857	375	6,513	1,113	71	40	384	(NA)
1967.....	865	344	6,532	1,073	(NA)	(NA)	(NA)	409
1963.....	784	362	5,850	983	(NA)	(NA)	(NA)	420

(NA) Not available. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

<sup>2</sup>Data for this new industry were derived from Table 8, "General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization," in volume II of the 1967, 1963, and 1958 censuses of manufactures.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee	Assets per employee	Production worker as percent of total employment	Annual men-hours of production workers	Average hourly earnings of production workers	Cost of materials per dollar of shipments	Cost of materials end payroll per dollar of shipments	Assets per dollar of shipments	Value added per employee	Payrolls as percent of value added	Value added per man-hour of production worker

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more			
	(number)	(number)	(1,000)	(million dollars)	(million dollars)	(number)	(number)	(1,000)	(million dollars)	(million dollars)
New industry 3546.--Power-Driven Handtools.....	88	65	23.1	434.5	730.5	(X)	(X)	(X)	(X)	(X)
Old industry 3548.--Metalworking Machinery, N.E.C.....	88	65	23.1	434.5	730.5	529	237	47.1	909.2	1,486.1
New industry 3547.--Rolling Mill Machinery.....	47	38	10.4	206.4	327.8	(X)	(X)	(X)	(X)	(X)
Old industry 3548.--Metalworking Machinery, N.E.C.....	47	38	10.4	206.4	327.8	529	237	47.1	909.2	1,486.1

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

(See appendix. Explanation of Terms)

<sup>2</sup>The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

<sup>1</sup>The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

<sup>2</sup>The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.  
(Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

(D) Withheld to avoid disclosing figures for individual companies.

**TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967**

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

**TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972**

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Machine tools, metal- cutting types (SIC 3541)	Machine tools, metal- forming types (SIC 3542)	Special dies, tools, jigs, and fixtures (SIC 3544)	Machine tool accessories (SIC 3545)	Power- driven handtools (SIC 3546)	Rolling mill machinery (SIC 3547)	Metal- working machinery, n.e.c. TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Machine tools, metal-cutting types (SIC 3541)	Machine tools, metal-forming types (SIC 3542)	Special dies, tools, jigs, and fixtures (SIC 3544)	Machine tool accessories (SIC 3545)	Power-driven handtools (SIC 3546)	Rolling mill machinery (SIC 3547)	Metal-working machinery, n.e.c. 35451 27	Countersinks, including port cutters, etc., but excluding combined drills and countersinks and pilots for interchangeable pilot types.....	5.6	4.2
35451 29	Counterbores, including spot facers, etc., but excluding pilots for interchangeable pilot types.....	9.6	10.9
	Reamers, all types, but excluding gun reamers:		
35451 31	Carbon steel, including blades sold separately.....	2.8	3.0
35451 33	High-speed steel, including blades sold separately.....	17.1	17.9
35451 36	Carbide, solid and tipped (excluding tips and blanks sold separately but including replaceable blades sold separately).....	11.5	7.8
	Hobs:		
35451 41	Unground.....	18.3	9.0
35451 45	Ground.....		7.8
35451 46	Gear shaper cutters.....	4.6	7.5
35451 48	Gear shaving cutters.....		4.6
	Milling cutters:		
	End mills (excluding all inserted blade types and shell mills but including solid or bonded blade type fishtail, die sinking, contour, router, tracer, hollow mills, etc.):		
35451 51	High-speed steel.....	40.2	43.0
35451 52	Carbide, solid and tipped (excluding tips and blanks sold separately).....	7.2	6.1
	Replaceable inserted blade cutters, all types:		
	Special blade cutters (other than standard throwaway insert type):		
35451 53	Cutters, complete, 4-inch diameter and under.....	2.4	24.7
35451 54	Cutters, complete, over 4-inch diameter.....	9.4	
35451 55	Standard throwaway insert type:		
35451 56	Cutters, complete, 4-inch diameter and under.....	1.6	
	Cutters, complete, over 4-inch diameter.....	1.9	
35451 58	Form relieved cutters, including high-speed steel and carbide (solid and tipped).....	6.6	11.3
35451 59	Slitting saws and screw slotting cutters, including high-speed steel and carbide (solid and tipped).....	6.9	8.5
	Milling cutters, not elsewhere classified:		
35451 61	High-speed steel.....	19.0	12.7
35451 63	Carbide, solid and tipped (excluding tips and blanks sold separately).....	5.4	6.9
	Single point tools: <sup>5</sup>		
35451 65	High-speed steel.....	8.7	13.8
35451 66	Carbide, including solid (except rough blanks) and tipped but excluding tips and blanks sold separately.....	30.7	26.8
35451 68	Other materials.....	8.1	14.5
35451 72	Circular form tools, including blanks.....	8.6	16.5
	Threading tools:		
	Taps, excluding taps in threading sets and screw plates and inserted chaser types:		
35451 76	Carbon steel.....	6.0	64.8
35451 77	High-speed steel.....	57.9	
35451 78	Carbide, solid and tipped.....		
35451 73	Dies, threading, including carbon steel, high-speed steel, and carbide but excluding dies in threading sets or screw plates, and inserted chaser types.....	8.7	8.5
35451 75	Chasers and blades for both taps or dies of inserted blade or chaser type, including high-speed steel and carbide (excluding the die heads and insert or collapsible tap bodies).....	17.4	17.0
35451 87	Thread rolling dies, including circular, flat, and planetary.....	14.7	11.0
35451 89	Other threading tools, including screw plates and threading sets.....	2.1	5.0
	Blanks, tips, and inserts: <sup>6</sup>		
35451 81	Blanks and tips, including carbide, cast alloy, and ceramic.....	24.9	56.0
	Inserts, standard throwaway types:		
	Carbide:		
35451 82	Utility ground.....	15.0	31.3
35451 83	Precision ground.....	56.7	38.6
35451 84	As molded (pressed to size).....	34.1	(NA)
35451 85	Other than carbide.....	4.3	1.8
	Special inserts, other than standard throwaway types, including on-end, prismatic, spiral, and special form or shaped blades, etc.:		
35451 86	Carbide.....	27.1	8.7
35451 88	Other than carbide.....	6.1	1.0
	Other types of cutting tools for machine tools, n.e.c., including rotary burrs, rotary files, and spade drills:		
35451 92	Carbon steel.....	2.2	6.4
35451 94	High-speed steel.....	13.3	26.3
35451 96	Carbide, solid and tipped (excluding tips and blanks sold separately).....	19.0	25.6
35451 00	Small cutting tools for machine tools and metalworking machinery, n.s.k.....	31.7	29.5

See footnotes at end of table.

35495 41	Coil-handling equipment (conversion or straightening).....		(X)	27.8		
35495 98	Other metalworking machinery.....		(X)	49.5		
35495 10	Machines for weaving and other wirefabricating and wiredrawing machines and draw benches.....		(X)	19.0	(X)	52.8
35495 00	Other metalworking machinery, n.s.k.....		(X)	4.4	-	-
35490 00	Metalworking machinery, n.s.k., for companies with 10 employees or more. (See note.).....		(X)	36.9	(X)	40.4
35490 02	Metalworking machinery, n.s.k., for companies with less than 10 employees. (See note.).....		(X)	15.1	(X)	7.4

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available.

<sup>1</sup>The data for 1972 and 1967 present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series MQ-35W, Metalworking Machinery. The product detail as shown are those collected on the CIR form specified.

<sup>2</sup>Includes \$15.5 million identified in the 1967 census as "All other metal-forming machine tools." No comparable data were reported in 1972.

<sup>3</sup>Revised to exclude die-casting machines.

<sup>4</sup>Excludes dies, tools, jigs, fixtures, and molds produced and retained for use in the same establishment.

<sup>5</sup>Single point tools are one-piece single point or multiple point tool bits with integral cutting edges or with cutting tips brazed or bonded to holder or shank; with square, rectangular, round and other cross-section shanks; and with single and double end including flat form and dovetail tools used for turning, planing, boring, shaping, shaving, forming, threading, cutting off, etc.; excluding circular form tools, and all mechanical holding devices and replaceable inserts.

<sup>6</sup>Blanks are cast or formed material, unground, and requiring further processing to make a solid tool or cutting tip. (Does not include pressed to size, as molded ready-to-use inserts.) Tips are a finished or semifinished form of blank to be brazed, soldered, or otherwise bonded to a shank to form a cutting tool. Inserts are replaceable, mechanically-held cutting-edge components of cutting tools, either pressed to size, or ground on all surfaces (precision ground), or ground on top and bottom only (utility ground).

<sup>7</sup>The product class structure for this industry was revised, effective in 1972.

<sup>8</sup>For 1972, product code 35471 11, Blooming and slabbing machinery is combined with product code 35471 19, Other hot rolling mill machinery and equipment.

TABLE 6A-2. Total Shipments (Including Exports) of Metal-Cutting Machine Tools: 1972 and 1967

1972 product code	Product	Unit of measure	Quantity	Value ((\$1,000))
	(As reported in Current Industrial Reports, series MQ-35W, Metalworking Machinery)		1972

35418 21- 27, 65	Planers and centering machines.....	...do.....	(D)	(D)
35418 70 75-90	All other metal-cutting machines <sup>8</sup> <sup>9</sup> .....	...do.....	11,183	41,683

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. \* Represents a combination of codes. <sup>r</sup>Revised.

<sup>1</sup>Includes data for some machines with an average value of under \$1,000.

<sup>2</sup>Data for machines with an average value of less than \$1,000 have been included with all other drilling machines (code 35412 99).

<sup>3</sup>Data for machines with an average value of less than \$1,000 have been included with all other grinding and polishing machines (code 35414 99).

<sup>4</sup>Data for bench grinders, average value \$1,000 and over (code 35414 43) are included with floor and snag grinders, average value \$1,000 and over (code 35414 45).

<sup>5</sup>Data for machines with average value over \$1,000 are withheld to avoid disclosing operations of individual companies.

<sup>6</sup>Data for machines with an average value of less than \$1,000 have been included with all other lathes (code 35415 99).

<sup>7</sup>Included with all other milling machines (code 35416 99).

<sup>8</sup>Data for machines with an average value of less than \$1,000 have been included with all other metal-cutting machines (code 35418 90).

<sup>9</sup>Includes data for reaming machines (except rifle reaming); screw and nut slotting machines; electroerosion machines; ultrasonic machines; and electrolytic machines.

(D) Withheld to avoid disclosing figures for individual companies. \* Represents a combination of codes. <sup>†</sup>Revised. pt. Part.<sup>1</sup>Data for machines with an average value of less than \$1,000 have been included with product code 35421 19, "Other punching and shearing machines."<sup>2</sup>Data for machines with an average value of less than \$1,000 have been included with product codes 35421 49 and 35421 51, "Other bending and forming machines."<sup>3</sup>Data for machines with an average value of less than \$1,000 have been included with product code 35422 00, "All other presses."<sup>4</sup>Includes data for some machines with an average value under \$1,000.<sup>5</sup>Data for machines with an average value of less than \$1,000 have been included with product code 35423 47, "Marking machines, knurling machines, etc."

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

(Footnotes for table 6B)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9  
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9  
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9  
GG.....\$50.0 and over

(NA) Not available.

TABLE 6C. Product Classes—Value Shipped by All Manufacturing Establishments: 1958, 1963, 1967 to 1972

(NA) Not available. (S) Withheld because the data did not meet publication standards.

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

<sup>2</sup>Diecasting dies (molds) are included in 1967 in product class 35442. For prior years, they were included in product class 35441.

<sup>3</sup>Product class 35440 included with product class 35441 for 1958.

<sup>4</sup>Code 35490 includes codes 35460 and 35470 prior to 1972.

TABLE 7A. Materials Consumed, by Kind: 1972 and 1967—Continued

(Footnotes for table 7A)

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.  
 (Z) Less than half of the unit of measure shown.

<sup>1</sup>Excludes quantities produced and consumed in the same establishment.

<sup>2</sup>This item represents the total cost of materials for establishments that did not report detailed materials data. Also includes estimates for companies that were not mailed report forms.

<sup>3</sup>Includes cost for materials indicated by the symbol (D).

<sup>4</sup>Data for material code 331015, structural shapes, are included with material code 331019, all other carbon steel mill shapes and forms.

<sup>5</sup>Data for material code 335301, aluminum sheet, plate, and foil, are included in material code 335008, all other aluminum mill shapes and forms.

TABLE 7B. Fuels and Electric Energy Consumed: 1971 and 1967

(See appendix, Explanation of Terms)

1972 code	Item	Unit of measure	1971		1967	
			Quantity	Cost	Quantity	Cost
				(million dollars)		(million dollars)

# EXPLANATORY TEXT

## SPECIAL INDUSTRY MACHINERY, EXCEPT METALWORKING MACHINERY

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

- 3551—Food Products Machinery
- 3552—Textile Machinery
- 3553—Woodworking Machinery
- 3554—Paper Industries Machinery
- 3555—Printing Trades Machinery and Equipment\*
- 3559—Special Industry Machinery, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## INDUSTRY 3551.—FOOD PRODUCTS MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for use by the food products and beverage manufacturing industries in the preparation, canning, or packaging of food products; and parts and attachments for such machinery.

Establishments primarily engaged in manufacturing industrial refrigeration machinery are classified in SIC group 385. For a detailed list of products of industry 3551, refer to table 6A, product codes 35511 15 to 35514 91.

---

\*Note that the "short title" for this industry is used throughout the report.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Food Products Machinery Industry in 1972 totaled \$1 billion. This included shipments of food products machinery (primary products) valued at \$772 million, shipments of other products (secondary products) valued at \$89 million, and miscellaneous receipts (mainly resales) of \$139 million.

Shipments of food products machinery (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 88 percent. Secondary products shipped by this industry in 1972 consisted mainly of fabricated platework (boiler shops) (\$8 million) and refrigeration and heating equipment (\$6 million).

Shipments of food products machinery (primary products) from establishments classified in industry 3551 in 1972 represented 89 percent (coverage ratio) of these products valued at \$867 million shipped by all industries. In 1967, the coverage ratio was 86 percent. Other industries shipping food products machinery consisted mainly of industry 3569, General Industrial Machinery, N.E.C., (\$6 million) and industry 3523, Farm Machinery and Equipment (\$5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3551, these establishments accounted for 8 percent of value of shipments.

## INDUSTRY 3552.—TEXTILE MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for the textile industries, including parts, attachments, and accessories.

Establishments primarily engaged in manufacturing domestic or industrial sewing machines are classified in industry 3636. For a detailed list of products of industry 3552, refer to table 6A, product codes 35521 15 to 35522 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Textile Machinery Industry in 1972 totaled \$823 million. This included shipments of textile machinery (primary products) valued at \$709 million, shipments of other products (secondary products) valued at \$43 million, and miscellaneous receipts (mainly resales) of \$71 million.

Shipments of textile machinery (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of gray iron castings (\$8 million).

Shipments of textile machinery (primary products) from establishments classified in industry 3552 in 1972 represented 96 percent (coverage ratio) of these products valued at \$738 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping textile machinery consisted mainly of industry 3441, Fabricated Structural Metal (\$4.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3552, these establishments accounted for 6 percent of value of shipments.

#### INDUSTRY 3553.—WOODWORKING MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for sawmills, planing mills, cabinet and furniture makers, pattern makers, and veneer workers.

Establishments primarily engaged in manufacturing handtools such as planes, axes, drawknives, and handsaws are classified in SIC group 342; and portable power-driven handtools in industry 3546. For a detailed list of products of industry 3553, refer to table 6A, product codes 35531 12 to 35532 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Woodworking Machinery Industry in 1972 totaled \$488 million. This included shipments of woodworking machinery (primary products) valued at \$402 million, shipments of other products (secondary products) valued at \$46 million, and miscellaneous receipts (mainly resales) of \$41 million.

Shipments of woodworking machinery (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 83 percent. Secondary products shipped by this industry in 1972 consisted mainly of internal combustion engines, n.e.c., (\$5.0 million) and machine tools, metal-cutting types, (\$4 million).

Shipments of woodworking machinery (primary products) from establishments classified in industry 3553 in 1972 represented 91 percent (coverage ratio) of these products valued at \$442 million shipped by all industries. In 1967, the coverage ratio was 87 percent. Other industries shipping woodworking machinery consisted mainly of industry 3541, Machine Tools, Metal-Cutting Types, (\$15 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3553, these establishments accounted for 3 percent of value of shipments.

#### INDUSTRY 3554.—PAPER INDUSTRIES MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for the pulp, paper, and paper products industries.

Establishments primarily engaged in manufacturing printing trades machinery are classified in industry 3555. For a detailed list of products of industry 3554, refer to table 6A, product codes 35540 11 to 35540 81.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Paper Industries Machinery Industry in 1972 totaled \$448 million. This included shipments of paper industries machinery (primary products) valued at \$330 million, shipments of other products (secondary products) valued at \$60 million, and miscellaneous receipts (mainly resales) of \$58 million.

Shipments of paper industries machinery (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 92 percent.

Shipments of paper industries machinery (primary products) from establishments classified in industry 3554 in 1972 represented 86 percent (coverage ratio) of these products

valued at \$381 million shipped by all industries. In 1967, the coverage ratio was also 86 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3554, these establishments accounted for 3 percent of value of shipments.

#### **INDUSTRY 3555.—PRINTING TRADES MACHINERY (Short Title)**

This industry comprises establishments primarily engaged in manufacturing machinery and equipment used by the printing and bookbinding trades.

Establishments primarily engaged in manufacturing textile printing machinery are classified in industry 3552. For a detailed list of products of industry 3555, refer to table 6A, product codes 35551 21 to 35555 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Printing Trades Machinery Industry in 1972 totaled \$824 million. This included shipments of printing trades machinery (primary products) valued at \$670 million, shipments of other products (secondary products) valued at \$19 million, and miscellaneous receipts (mainly resales) of \$134 million.

Shipments of printing trades machinery (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 98 percent. Secondary products shipped by this industry in 1972 consisted mainly of fabricated rubber products, n.e.c. (\$4 million).

Shipments of printing trades machinery (primary products) from establishments classified in industry 3555 in 1972 represented 91 percent (coverage ratio) of these products valued at \$737 million shipped by all industries. In 1967, the coverage ratio was 94 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics

constructed from industry averages. For industry 3555, these establishments accounted for 6 percent of value of shipments.

#### **INDUSTRY 3559.—SPECIAL INDUSTRY MACHINERY, N.E.C.**

This industry comprises establishments primarily engaged in manufacturing special industry machinery, not elsewhere classified, such as smelting and refining equipment, cement-making, clayworking, cotton ginning, glassmaking, hatmaking, incandescent lampmaking, leatherworking, paintmaking, rubberworking, cigar and cigarette making, tobacco working, shoemaking, and stoneworking machinery. For a detailed list of products of industry 3559, refer to table 6A, product codes 35591 11 to 35595 93.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Special Industry Machinery, N.E.C., Industry in 1972 totaled \$2,604 million. This included shipments of special industry machinery, n.e.c., (primary products) valued at \$1,924 million, shipments of other products (secondary products) valued at \$421 million, and miscellaneous receipts (mainly resales) of \$259 million.

Shipments of special industry machinery, n.e.c., (primary products) in 1972 represented 82 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 82 percent. Secondary products shipped by this industry in 1972 consisted mainly of general industrial machinery, n.e.c., (\$28 million); valve and pipe fittings (\$12 million); and special dies, tools, jigs, and fixtures (\$12 million).

Shipments of special industry machinery, n.e.c., (primary products) from establishments classified in industry 3559 in 1972 represented 81 percent (coverage ratio) of these products valued at \$2,367 million shipped by all industries. In 1967, the coverage ratio was also 81 percent. Other industries shipping special industry machinery, n.e.c., consisted mainly of industry 3569, General Industrial Machinery, N.E.C., (\$23 million) and industry 3423, Hand and Edge Tools, N.E.C. (16 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3559, these establishments accounted for 4 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 3551	Industry 3552	Industry 3553	Industry 3554	Industry 3555	Industry 3559
1972.....	636	535	229	203	523	1,310
1967.....	611	524	232	206	485	1,085
1963.....	649	529	245	204	463	1,074

(NA) Not available. (S) Withheld because the data did not meet publication standards. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(NA) Not available.      (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underacred figures above.

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

**TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967**

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio
		(million dollars)	(million dollars)	(million dollars)	(million dollars)	Col. B Col. B & C (percent)	(million dollars)	(million dollars)	(million dollars)	Col. B Col. F (percent)

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	Other industries	Product code	Industry, class of products, and miscellaneous receipts	Other industries
	Listing of other industries with over \$2 million shipments of the primary products			Listing of other industries with over \$2 million shipments of the primary products—Continued

35595 00	Special industry machinery, n.e.c., n.s.k., for establishments with 10 employees or more. (See note.).....		(X)	128.8	(X)	81.1
35590 02	Special industry machinery, n.e.c., n.s.k., for establishments with less than 10 employees. (See note.).....		(X)	40.7	(X)	17.9

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The product class structure for this industry is revised effective with 1972. The effect of this change is to combine into a separate product class all packing, packaging, and bottling machinery for industrial food products.

<sup>2</sup>1967 data on capping and other dairy bottling machines (code 35514 17) combined with product code 35511 15, washing and sterilizing equipment.

<sup>3</sup>1967 data for product code 35514 13, uncasers and casers, and product code 35511 51, homogenizers, are included with product code 35511 98, other dairy and milk products processing machinery.

<sup>4</sup>For combination slicing and wrapping machines, the number and value of slicing units are included with slicing machines (code 35512 81) and the number and value of wrapping units with wrapping machines (code 35514 85).

<sup>5</sup>1967 data for product code 35514 21, meat and poultry packing and packaging machinery, are combined with product code 35513 13, meat and poultry processing and preparation machinery and equipment (killing, dehairing, stuffing, cooking, rendering, etc.).

<sup>6</sup>For 1967, product code 35514 91 is combined with product code 35513 83.

<sup>7</sup>Also includes packing, packaging, and bottling machinery for industrial food products, n.s.k.

<sup>8</sup>Data for product code 35514 61, carbonators (beverage bottling), are combined in product code 35514 69, other food and beverage bottling machinery, except dairy.

<sup>9</sup>Data for product code 35521 65, power looms, are included with product code 35521 84, other fabric machinery, to avoid disclosing figures for individual companies.

<sup>10</sup>Data for product code 35540 41, Fourdriniers, including yankee machines, are included in product code 35540 49, other paper machinery, to avoid disclosing figures for individual companies.

<sup>11</sup>The product class structure of this industry has been significantly changed effective in 1972.

<sup>12</sup>1967 data for lithographic printing presses, n.s.k., also includes other printing presses, n.s.k.

<sup>13</sup>Data for 1972 on product codes 35553 51 and 35553 54 are included in product code 35553 56.

<sup>14</sup>Data for 1967 on product code 35553 51 are included in product code 35553 56.

<sup>15</sup>Includes bindery equipment, n.s.k., and typesetting machinery and equipment, n.s.k.

<sup>16</sup>"High-intensity solids mixers" are included with "Other rubber-working machinery..." to avoid disclosure of individual companies for 1972.

<sup>17</sup>Some equipment in this product class may be leased rather than sold outright. For leased equipment, estimates of the value of products produced were reported. These estimates approximate the value of the products had they been sold outright, and are based on market values of the products, tax or insurance valuations, etc.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9      CC.....\$5.0 to \$9.9      FF.....\$20.0 to \$49.9  
BB.....\$2.0 to \$4.9      EE.....\$10.0 to \$19.9      GG.....\$50.0 and over

(NA) Not available.

<sup>1</sup>The product class structure for this industry is revised effective with 1972 and therefore comparable 1967 geographic data are not available. The effect of this change is to combine into a separate product class all packaging, packing, and bottling machinery for industrial food products.

<sup>2</sup>Data for 1967 include wrapping machines whereas the 1972 data for such machines are included in code 35514. The effect of this change is estimated to be less than 2 percent.

<sup>3</sup>The product class structure for this industry is revised effective with 1972 and, therefore, comparable 1967 geographic data are not available.

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

# EXPLANATORY TEXT

## GENERAL INDUSTRIAL MACHINERY AND EQUIPMENT

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

- 3561—Pumps and Pumping Equipment
- 3562—Ball and Roller Bearings
- 3563—Air and Gas Compressors
- 3564—Blowers and Exhaust and Ventilation Fans\*
- 3565—Industrial Patterns
- 3566—Speed Changers, Industrial High Speed Drives, and Gears\*
- 3567—Industrial Process Furnaces and Ovens\*
- 3568—Mechanical Power Transmission Equipment, N.E.C.\*
- 3569—General Industrial Machinery and Equipment, N.E.C.\*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

### INDUSTRY 3561.—PUMPS AND PUMPING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing pumps and pumping equipment for general industrial use. Establishments primarily engaged in manufacturing measuring and dispensing pumps for gasoline service-

---

\*Note that the "short title" for this industry is used throughout the report.

station use are classified in industry 3586, Measuring and Dispensing Pumps, and industry 3563, Air and Gas Compressors. For a detailed list of products of industry 3561, refer to table 6A, product codes 35611 01 to 35616 13.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been changed from the previous classification system. Data for compressors have been moved to new industry 3563, Air and Gas Compressors. (See table 1C for a comparison of the old and new industries.)

Value of shipments and other receipts of the Pumps and Pumping Equipment Industry in 1972 totaled \$1,917 million. This included shipments of pumps and pumping equipment (primary products) valued at \$1,408 million, shipments of other products (secondary products) valued at \$296 million, and miscellaneous receipts (mainly resales) of \$213 million.

Shipments of pumps and pumping equipment (primary products) in 1972 represented 83 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent.

Shipments of pumps and pumping equipment (primary products) from establishments classified in industry 3561 in 1972 represented 86 percent (coverage ratio) of these products valued at \$1,633 million shipped by all industries. In 1967, the coverage ratio was 88 percent. Other industries shipping pumps and pumping equipment consisted mainly of industry 3494, Valves and Pipe Fittings, (\$26 million); industry 3533, Oil Field Machinery, (\$24 million); and industry 3621, Motors and Generators, (\$28 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3561, these establishments accounted for 5 percent of value of shipments.

### INDUSTRY 3562.—BALL AND ROLLER BEARINGS

This industry comprises establishments primarily engaged in manufacturing ball and roller bearings (including ball or roller bearing pillow block, flange, takeup cartridge, and hanger units) and parts. Establishments primarily engaged in manufacturing bearings, except ball and roller, are classified in industry

3568. For a detailed list of products of industry 3562, refer to table 6A, product codes 35621 01 to 35629 41.

The code number and content for this industry in the 1972 revision of the SIC are unchanged.

Value of shipments and other receipts of the Ball and Roller Bearings Industry in 1972 totaled \$1,530 million. This included shipments of ball and roller bearings (primary products) valued at \$1,399 million, shipments of other products (secondary products) valued at \$87 million, and miscellaneous receipts (mainly resales) of \$45 million.

Shipments of ball and roller bearings (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of power transmission equipment, n.e.c., (\$36 million).

Shipments of ball and roller bearings (primary products) from establishments classified in industry 3562 in 1972 represented 99 percent (coverage ratio) of these products valued at \$1,419 million shipped by all industries. In 1967, the coverage ratio was 97 percent. Other industries shipping ball and roller bearings consisted mainly of industry 3568, Power Transmission Equipment, N.E.C., (\$11 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3562, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3563.—AIR AND GAS COMPRESSORS**

This industry comprises establishments primarily engaged in manufacturing air and gas compressors for general industrial use. Establishments primarily engaged in manufacturing refrigeration compressors and compressing units are classified in industry 3585, Refrigeration and Heating Equipment. For a detailed list of products of industry 3563, refer to table 6A, product codes 35631 10 to 35635 51.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, constitute a new industry. Compressors were formerly included in industry 3561, Pumps and Compressors. (See table 1C for a comparison of the old and new industries.)

Value of shipments and other receipts of the Air and Gas Compressors Industry in 1972 totaled \$858 million. This

included shipments of air and gas compressors (primary products) valued at \$650 million, shipments of other products (secondary products) valued at \$135 million, and miscellaneous receipts (mainly resales) of \$74 million.

Shipments of air and gas compressors (primary products) in 1972 represented 83 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of internal combustion engines at \$70 million.

Shipments of air and gas compressors (primary products) from establishments classified in industry 3563 in 1972 represented 90 percent (coverage ratio) of these products valued at \$723 million shipped by all industries. Other industries shipping air and gas compressors consisted mainly of industry 3561, Pumps and Pumping Equipment, (\$32 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3563, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3564.—BLOWERS AND FANS (Short Title)**

This industry comprises establishments primarily engaged in manufacturing industrial and commercial blowers, industrial and commercial exhaust and ventilating fans, and attic fans. Establishments primarily engaged in manufacturing air-conditioning units are classified in industry 3585 (Refrigeration and Heating Equipment), and free-air circulating fans for use on desks, pedestals, or wall brackets, as well as household window-type fans and rollabouts, and kitchen and household ventilating and exhaust fans are classified in industry 3634 (Electric Housewares and Fans). For a detailed list of products of industry 3564, refer to table 6A, product codes 35643 17 to 35646 69.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Blowers and Fans Industry in 1972 totaled \$805 million. This included shipments of blowers and fans (primary products) valued at \$571 million, shipments of other products (secondary products) valued at \$152 million, and miscellaneous receipts (mainly resales) of \$82 million.

Shipments of blowers and fans (primary products) in 1972 represented 79 percent (specialization ratio) of the industry's

total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent.

Shipments of blowers and fans (primary products) from establishments classified in industry 3564 in 1972 represented 84 percent (coverage ratio) of these products valued at \$682 million shipped by all industries. In 1967, the coverage ratio was 82 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3564, these establishments accounted for 6 percent of value of shipments.

#### **INDUSTRY 3565.—INDUSTRIAL PATTERNS**

This industry comprises establishments primarily engaged in manufacturing industrial patterns. For a detailed list of products of industry 3565, refer to table 6A, product codes 35650 11 and 35650 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Industrial Patterns Industry in 1972 totaled \$198.0 million. This included shipments of industrial patterns (primary products) valued at \$184 million, shipments of other products (secondary products) valued at \$10 million, and miscellaneous receipts (mainly resales) of \$4 million.

Shipments of industrial patterns (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent.

Shipments of industrial patterns (primary products) from establishments classified in industry 3565 in 1972 represented 78 percent (coverage ratio) of these products valued at \$234 million shipped by all industries. In 1967, the coverage ratio was 80 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3565, these establishments accounted for 21 percent of value of shipments.

#### **INDUSTRY 3566.—SPEED CHANGERS, DRIVES, AND GEARS (Short Title)**

This industry comprises establishments primarily engaged in manufacturing speed changers, industrial high-speed drives, and gears. Establishments primarily engaged in manufacturing these items for motor vehicles are classified in industry 3714 (Motor Vehicle Parts and Accessories). For a detailed list of products of industry 3566, refer to table 6A, product codes 356660 11 to 356660 51.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been changed from the previous classification system. Data for plain bearings and other mechanical power transmission equipment, except speed changers, drives, and gears, have been moved to new industry 3568, Power Transmission Equipment, N.E.C. (See table 1C for a comparison of the old and new industries.)

Value of shipments and other receipts of the Speed Changers, Drives, and Gears Industry in 1972 totaled \$633 million. This included shipments of speed changers, drives, and gears (primary products) valued at \$526 million, shipments of other products (secondary products) valued at \$72 million, and miscellaneous receipts (mainly resales) of \$35 million.

Shipments of speed changers, drives, and gears (primary products) in 1972 represented 88 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of power transmission equipment at \$44 million.

Shipments of speed changers, drives, and gears (primary products) from establishments classified in industry 3566 in 1972 represented 89 percent (coverage ratio) of these products valued at \$593 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3566, these establishments accounted for 5 percent of value of shipments.

#### **INDUSTRY 3567.—INDUSTRIAL FURNACES AND OVENS (Short Title)**

This industry comprises establishments primarily engaged in manufacturing industrial process furnaces, ovens, induction and dielectric heating equipment, and related devices. For a detailed list of products of industry 3567, refer to table 6A, product codes 35671 11 to 35673 91.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Industrial Furnaces and Ovens Industry in 1972 totaled \$443 million. This included shipments of industrial furnaces and ovens (primary products) valued at \$312 million, shipments of other products (secondary products) valued at \$85 million, and miscellaneous receipts (mainly resales) of \$46 million.

Shipments of industrial furnaces and ovens (primary products) in 1972 represented 78 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent. Secondary products shipped by this industry in 1972 consisted mainly of special industry machinery, n.e.c., at \$11 million.

Shipments of industrial furnaces and ovens (primary products) from establishments classified in industry 3567 in 1972 represented 91 percent (coverage ratio) of these products valued at \$341 million shipped by all industries. In 1967, the coverage ratio was 88 percent. Other industries shipping industrial furnaces and ovens consisted mainly of industry 3559, Special Industry Machinery, N.E.C., (\$8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3567, these establishments accounted for 4 percent of value of shipments.

#### **INDUSTRY 3568.—POWER TRANSMISSION EQUIPMENT, N.E.C. (Short Title)**

This industry comprises establishments primarily engaged in manufacturing mechanical power transmission equipment and parts for industrial machinery. Establishments primarily engaged in manufacturing automotive, tank, and tractor power transmission equipment are classified in industry 3714 (Motor Vehicle Parts and Accessories); aircraft power transmission equipment in industry 3728 (Aircraft Equipment, N.E.C.); ball and roller bearings in industry 3562; and speed changers, industrial high-speed drives, and gears in industry 3566. For a detailed list of products of industry 3568, refer to table 6A, product codes 35681 15 to 35683 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual constitutes a new industry. Plain bearings and other mechanical power-transmission equipment, except speed changers, drives, and gears, were formerly included in industry 3566, Speed Changers, Drives, and Gears. (See table 1C for a comparison of the old and new industries.)

Value of shipments and other receipts of the Power Transmission Equipment, N.E.C., Industry in 1972 totaled \$876 million. This included shipments of power transmission equipment, n.e.c., (primary products) valued at \$719 million, shipments of other products (secondary products) valued at \$107 million, and miscellaneous receipts (mainly resales) of \$51 million.

Shipments of power transmission equipment, n.e.c., (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of motor vehicle parts and accessories at \$38 million.

Shipments of power transmission equipment, n.e.c., (primary products) from establishments classified in industry 3568 in 1972 represented 74 percent (coverage ratio) of these products valued at \$975 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3568, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3569.—GENERAL INDUSTRIAL MACHINERY, N.E.C. (Short Title)**

This industry comprises establishments primarily engaged in manufacturing machinery, equipment, and components for general industrial use, and for which no special classification is provided. Establishments primarily engaged in producing machine and equipment parts, usually on a job or order basis, are classified in industry 3599 (Machinery, Except Electrical, N.E.C.). For a detailed list of products of industry 3569, refer to table 6A, product codes 35691 12 to 35699 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the General Industrial Machinery, N.E.C., Industry in 1972 totaled \$1,169 million. This included shipments of general industrial machinery, n.e.c., (primary products) valued at \$923 million, shipments of other products (secondary products) valued at \$163 million, and miscellaneous receipts (mainly resales) of \$84 million.

Shipments of general industrial machinery, n.e.c., (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and

---

## EXPLANATORY TEXT—Continued

secondary). The industry specialization ratio in 1967 was also 85 percent. Secondary products shipped by this industry in 1972 consisted mainly of service industry machinery, n.e.c., (\$29 million).

Shipments of general industrial machinery, n.e.c., (primary products) from establishments classified in industry 3569 in 1972 represented 81 percent (coverage ratio) of these products valued at \$1,133 million shipped by all industries. In 1967, the coverage ratio was 79 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3569, these establishments accounted for 7 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	1972 industry 3561	1972 industry 3562	1972 industry 3563	1972 industry 3564	1972 industry 3565	1972 industry 3566	1972 industry 3567	1972 industry 3568	1972 industry 3569	1967 industry 3561
1972.....	506	99	55	360	1,017	330	253	125	864	(X)
1967.....	(X)	85	(X)	271	1,156	(X)	246	(X)	725	590
1963.....	(X)	93	(X)	225	1,206	(X)	229	(X)	568	589

(X) Not applicable. (NA) Not available. (S) Withheld because the data did not meet publication standards. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee	Assets per employee	Production worker as percent of total employment	Annual man-hours of production workers	Average hourly earnings of production workers	Cost of materials per dollar of shipments	Cost of materials and payrolls per dollar shipments	Assets per dollar of shipments	Value added per employee	Payrolls as percent of value added	Value added per man-hour of production worker

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more			
	(number)	(number)	(1,000)	(million dollars)	(million dollars)	(number)	(number)	(1,000)	(million dollars)	(million dollars)
New industry 3561.--Pumps and Pumping Equipment.....	559	257	55.5	1,095.7	1,917.3	(X)	(X)	(X)	(X)	(X)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Notes: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underlined figures above. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

**TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967**

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscellaneous receipts	Primary product specialization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

**TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972**

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Pumps and pumping equipment (SIC 3561)	Ball and roller bearings (SIC 3562)	Air and gas compressors (SIC 3563)	Blowers and fans (SIC 3564)	Industrial patterns (SIC 3565)	Speed changers, drives, and gears (SIC 3566)	Industrial furnaces and ovens (SIC 3567)	Power transmission equipment, n.e.c. TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 5A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	Other industries	Product code	Industry, class of products, and miscellaneous receipts	Other industries
	Listing of the other industries with over \$2 million shipments of the primary products			Listing of the other industries with over \$2 million shipments of the primary products--Continued

35699 71	Pneumatic jacks.....	Units.....	}	(NA)	(NA)	24.2
35699 73	Hydraulic jacks.....	...do.....				
35699 98	All other general industrial machinery and equipment.....	...do.....	(NA)	402.2	(NA)	343.7
35690 00	General industrial machinery, n.e.c., n.s.k., for establishments with 10 employees or more. (See note.).....		(X)	116.5	(X)	123.0
35690 02	General industrial machinery, n.e.c., n.s.k., for establishments with less than 10 employees. (See note.).....		(X)	28.0	(X)	11.1

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.  
(Z) Less than half of the unit of measurement shown (less than 0.1 when rounded).

<sup>1</sup>The data for 1972 and 1967 present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series. The product detail as shown are those collected on the CIR form specified.

<sup>2</sup>The value of drivers is reported only at the product class level. For each product line, value figures exclude, except as noted for codes 35613 13 through 35613 70, the value of drivers (electric motors or prime movers) shipped with that product. The extent to which some respondents may have included the value of drivers with the value of specific pumps is unknown.

<sup>3</sup>For 1967, data for product code 35612 00, Hydraulic fluid power pumps, also include value for product code 35631 20, Vacuum pumps.

<sup>4</sup>Does not include hydraulic fluid power pumps for power-steering units in passenger automobiles.

<sup>5</sup>Includes the value of drivers.

<sup>6</sup>Prior to 1972, domestic sump pumps, 1 hp. and under, were included with other pumps.

<sup>7</sup>For 1967, value of parts and attachments for air and gas compressors is included with the value of parts and attachments for pumps and pumping equipment.

<sup>8</sup>For 1967, also includes value for air and gas compressors, n.s.k.

<sup>9</sup>This product class was redefined in 1972 to include plain mounted bearings. However, these data should have been classified in industry 3568 and are so shown in this report. For 1971 and prior years, this product was included in industry 3566, Power Transmission Equipment.

<sup>10</sup>For 1967, excludes the value of vacuum pumps which are included with hydraulic fluid power pumps, code 35612 --.

<sup>11</sup>The product class structure of this industry has been significantly changed effective in 1972.

<sup>12</sup>Represents 159.7 thousand units.

<sup>13</sup>Data for product code 35644 00, Propeller fans and accessories, axial fans, and power roof ventilators, n.s.k., includes data for Centrifugal fans and blowers, n.s.k. Centrifugal fans and blowers by detailed type are listed in product codes 35643 17-31.

<sup>14</sup>Data for product code 35645 31, Air washers, is included in product code 35645 49, Other dust collection and other air purification equipment.

<sup>15</sup>Most of this value represents components for dust collection and other air purification equipment for industrial gas cleaning systems.

<sup>16</sup>Excludes industrial patterns produced for use in the same establishment.

<sup>17</sup>Represents the value of gearmotor reducer elements only. Does not include the value of electric motors shipped as part of gearmotor reducer elements.

<sup>18</sup>Represents shipments of industrial furnaces and ovens produced by manufacturing establishments only. Does not include industrial furnaces and ovens erected at the site by engineering and construction firms which purchase component parts for such furnaces and ovens.

<sup>19</sup>Defined as a device for transmitting power from one shaft to another or between a shaft and other transmitting device (such as a gear, sprocket, pulley, or sheave) in which power is transmitted by fluid means with no direct mechanical connection.

<sup>20</sup>In 1972, data for product code 35683 13, Hydraulic type clutches, including hydraulic couplings, are included with product code 35683 19, All other clutches.

<sup>21</sup>Defined as a device for connecting two rotating shafts and designed to accommodate a limited degree of parallel and angular misalignment.

<sup>22</sup>In 1972, data for product codes 35683 61, Single drive sheaves, and 35683 87, Railroad car journal bearings, are included with product code 35683 98, Other mechanical power transmission equipment.

<sup>23</sup>In 1967, data for product code 35683 87, Railroad car journal bearings, are included with product code 35683 98, Other mechanical power transmission equipment.

<sup>24</sup>The product class structure for this industry was revised, effective with 1972.

<sup>25</sup>Data for aerosol packaging machines are included with other wrapping and packaging machinery to avoid disclosing data for individual companies.

TABLE 6A-2. New Orders, Shipments, and Backlog of Orders for Selected Industrial Air Pollution Control Equipment: 1972

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

(Footnotes for table 6B)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9  
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9  
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9  
GG.....\$50.0 and over

- Represents zero. (NA) Not available.

<sup>1</sup>This State or division was not shown as a separate line in table 6B in the 1967 report for this industry.

<sup>2</sup>The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 12 percent of the total 1967 shipments at the U.S. level.

<sup>3</sup>The individual product codes included in this class of product for 1972 differ significantly from the prior years. Products shifting into or out of this class of product represent more than 15 percent of the total shipments at the U.S. level.

<sup>4</sup>The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this product class represent approximately 5 percent of the 1967 shipments at the total U.S. level.

TABLE 6C. Product Classes—Value Shipped by All Manufacturing Establishments: 1958, 1963, 1967 to 1972

(In millions of dollars)

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parenthesis for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

<sup>2</sup>The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 12 percent of the total 1967 shipments at the U.S. level.

<sup>3</sup>The individual product codes included in this class of product for 1972 differ significantly from the prior year. Products shifting into or out of this class of product represent more than 15 percent of the total shipments at the U.S. level.

<sup>4</sup>For 1958 to 1971, value of parts and attachments for air and gas compressors is included with the value of parts and attachments for pumps.

<sup>5</sup>The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this product class represent approximately 5 percent of the 1967 shipments at the total U.S. level.

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.  
(Z) Less than 0.1.

<sup>1</sup>Excludes quantities produced and consumed in the same establishment.

<sup>2</sup>This item represents the total cost of materials for establishments that did not report detailed materials data. Also includes estimates for companies that were not mailed report forms.

<sup>3</sup>Includes cost for materials indicated by the symbol (D).

<sup>4</sup>For 1972, copper plate, sheet, and strip, etc., is combined with copper rod, bar, etc. (material code 335102).

5A	General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972 . . . . .	12
5B	Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967 . . . . .	13
5C	Industry-Product Analysis—Shipments by Product Class and Industry: 1972 . . . . .	13
6A	Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967 . .	15
6B	Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967 . . . . .	19
6C	Product Classes—Value Shipped by All Manufacturing Establishments: 1958, 1963, 1967 to 1972 . . . . .	21
7A	Materials Consumed, by Kind: 1972 and 1967 . . . . .	21
7B	Fuels and Electric Energy Consumed: 1971 and 1967 . . . . .	24

# EXPLANATORY TEXT

## OFFICE, COMPUTING, AND ACCOUNTING MACHINES

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

3573—Electronic Computing Equipment

3574—Calculating and Accounting Machines, Except Electronic Computing Equipment\*

3576—Scales and Balances, Except Laboratory

3572 } Typewriters; Office Machines, N.E.C.  
3579 }

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## INDUSTRY 3573.—ELECTRONIC COMPUTING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing electronic computers and peripheral equipment and/or major logical components intended for use in electronic computer systems. Included are general-purpose electronic analog computers, electronic digital computers, military, ruggedized, and special-purpose computers. The electronic computers may be used for data processing or may be incorporated as components of control equipment for industrial use

\*Note that the "short title" for this industry is used throughout the report.

and as components of equipment used in weapons and weapons systems, space and oceanographic exploration, transportation, and other systems. Electronic computer systems contain high-speed arithmetic and program control units, on-line information storage devices, input/output equipment, terminals, data communication devices, and punched card equipment.

In addition to providing technical manuals necessary for the operation and maintenance of the equipment, establishments in this industry usually furnish general-purpose computer programs and basic operating systems programs needed for effective use of the computer system. Establishments primarily producing rebuilt electronic computers are also included in this industry. For a detailed list of products of industry 3573, refer to table 6A, product codes 35731 11 to 35733 51.

Establishments primarily engaged in manufacturing desk calculators, cash registers, accounting machines, and similar equipment that are operator-paced are classified in industry 3574; electrical and electronic test equipment in industry 3825 (Instruments to Measure Electricity); industrial controls, including electronic, in industry 3622 (Industrial Controls); and industrial process instruments in industry 3823 (Process Control Instruments).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Electronic Computing Equipment Industry in 1972 totaled \$6,387 million. This included shipments of electronic computing equipment (primary products) valued at \$5,568 million, shipments of other products (secondary products) valued at \$453 million, and miscellaneous receipts of \$365 million.

Shipments of electronic computing equipment (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent.

Shipments of electronic computing equipment (primary products) from establishments classified in industry 3573 in 1972 represented 91 percent (coverage ratio) of these products valued at \$6,108 million shipped by all industries. In 1967, the coverage ratio was 87 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail

portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3573, these establishments accounted for 4 percent of value of shipments.

#### **INDUSTRY 3574.—CALCULATING AND ACCOUNTING MACHINES (Short Title)**

This industry comprises establishments primarily engaged in manufacturing desk calculators, adding and accounting machines, cash registers, and similar equipment. Included are electronic calculating and accounting machines which, even when augmented by attachments, or which include program control, or have input/output capabilities, must be paced by operator intervention. For a detailed list of products of industry 3574, refer to table 6A, product codes 35741 21 to 35745 31.

Establishments primarily engaged in manufacturing electronic computing equipment are classified in industry 3573; typewriters, office duplicating machines and devices, autographic registers, and other office machines are classified in industry 3579.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Calculating and Accounting Machines Industry in 1972 totaled \$637 million. This included shipments of calculating and accounting machines (primary products) valued at \$595 million, shipments of other products (secondary products) valued at \$19 million, and miscellaneous receipts (mainly resales) of \$24 million.

Shipments of calculating and accounting machines (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent.

Shipments of calculating and accounting machines (primary products) from establishments classified in industry 3574 in 1972 represented 86 percent (coverage ratio) of these products valued at \$694 million shipped by all industries. In 1967, the coverage ratio was 84 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3574, these establishments accounted for 1 percent of value of shipments.

#### **INDUSTRY 3576.—SCALES AND BALANCES, EXCEPT LABORATORY**

This industry comprises establishments primarily engaged in manufacturing weighing and force-measuring machines and devices of all types. For a detailed list of products of industry 3576, refer to table 6A, product codes 35760 13 to 35760 84.

Establishments primarily engaged in manufacturing measuring machines and devices regarded as scientific apparatus for laboratory and experimental work are classified in industry 3811 (Engineering and Scientific Instruments).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Scales and Balances, Except Laboratory, Industry in 1972 totaled \$199 million. This included shipments of scales and balances, except laboratory, (primary products) valued at \$172 million, shipments of other products (secondary products) valued at \$15 million, and miscellaneous receipts of \$11 million.

Shipments of scales and balances, except laboratory, (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent.

Shipments of scales and balances, except laboratory, (primary products) from establishments classified in industry 3576 in 1972 represented 95 percent (coverage ratio) of these products valued at \$182 million shipped by all industries. In 1967, the coverage ratio was 96 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at

the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3576, these establishments accounted for 2 percent of value of shipments.

**INDUSTRY 3572.—TYPEWRITERS and  
INDUSTRY 3579.—OFFICE MACHINES, N.E.C.**

The Typewriters Industry includes establishments primarily engaged in manufacturing typewriters and parts, including coded media typewriters and specialized composing typewriters. This industry is combined with the Office Machines, N.E.C., Industry which includes establishments primarily engaged in manufacturing office machines and devices, not elsewhere classified. For a detailed list of products of these industries, refer to table 6A, product codes 35793 11 to 35798 41.

Establishments primarily engaged in manufacturing computing machines are classified in industry 3573, cash registers in industry 3574, and photocopy and microfilm equipment in industry 3861 (Photographic Equipment and Supplies).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for these industries as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system. However, it

was necessary to combine industry 3572, Typewriters, with industry 3579, Office Machines, N.E.C., to avoid disclosing the operations of individual companies.

Value of shipments and other receipts of the Typewriters and Office Machines, N.E.C., Industries in 1972 totaled \$1,296 million. This included shipments of typewriters and office machines, n.e.c., (primary products) valued at \$913 million, shipments of other products (secondary products) valued at \$237 million, and miscellaneous receipts (mainly resales) of \$146 million.

Shipments of typewriters and office machines, n.e.c., (primary products) in 1972 represented 79 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent. Secondary products shipped by this industry in 1972 consisted mainly of carbon paper and inked ribbons (\$99 million).

Shipments of typewriters and office machines, n.e.c., (primary products) from establishments classified in industries 3572 and 3579 in 1972 represented 87 percent (coverage ratio) of these products valued at \$1,047 million shipped by all industries. In 1967, the coverage ratio was 89 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industries 3572 and 3579, these establishments accounted for 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio

TABLE 1A. General Statistics: 1958 to 1972—Continued

(Footnotes for table 1A)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industries 3572 and 3579	Industry 3573	Industry 3574	Industry 3576
1972.....	206	518	74	86
1967.....	190	134	132	69
1963.....	175	(NA)	213	81

(NA) Not available. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

<sup>2</sup>The value of shipments and cost of materials for this industry include extensive duplication arising from shipments between establishments in the same industry classification.

<sup>3</sup>Comparable data are not available prior to 1967.

<sup>4</sup>Separate data cannot be published for industry 3572, Typewriters, without revealing the operations of individual companies. Accordingly, industry 3572 has been combined with industry 3579, Office Machines, N.E.C., for 1972.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee  (dollars)	Assets per employee  (dollars)	Production worker as percent of total employment  (percent)	Annual man-hours of production workers  (number)	Average hourly earnings of production workers  (dollars)	Cost of materials per dollar of shipments  (dollars)	Cost of materials and payrolls per dollar shipments  (dollars)	Assets per dollar of shipments  (dollars)	Value added per employee  (dollars)	Payrolls as percent of value added  (percent)	Value added per man-hour of production worker  (dollars)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from the Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent  
E2--20 to 29 percent

E3--30 to 39 percent  
E4--40 to 49 percent

E5--50 to 59 percent  
E6--60 to 69 percent

E7--70 to 79 percent  
E8--80 to 89 percent

E9--90 to 99 percent  
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manuf-acture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

**TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967**

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

<sup>1</sup>Separate data cannot be published for industry 3572, Typewriters, without revealing the operations of individual companies. Accordingly, industry 3572 has been combined with industry 3579, Office Machines, N.E.C., for 1972.

**TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972**

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Note: Data shown parenthetically are ranges expressed in millions of dollars.

- Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>The product class structure for this industry has been significantly changed effective in 1972.

<sup>2</sup>Data for 1972 product code 35741 00, adding and calculating machines, include data for product codes 35743 00, accounting machines and cash registers; and 35745 00, parts and attachments for adding, calculating, and accounting machines, and cash registers.

<sup>3</sup>These products were previously identified as product class 35720.

<sup>4</sup>For 1972, data for product code 35794 00, dictating, transcribing, and recording machines, are included with product code 35796 00, all other office machines, n.e.c., to avoid disclosing data for individual companies.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

35798 10	Produced by complete machine manufacturers:					
	As reported in the census of manufactures <sup>3</sup> .....		(X)	77.0	(X)	59.2
	As reported in Current Industrial Reports series MA-35R <sup>4</sup> .....		(X)	83.3	(X)	56.7
35798 20	Parts and attachments for duplicating machines, sold separately.....		(X)	48.0	(X)	15.9
35798 40	Parts for dictating equipment.....		(X)		(X)	40.8
35798 50	Parts and attachments for office machines, n.e.c., except duplicating machines and dictating equipment.....		(X)	35.3	(X)	6.6
35798 41	Produced by other than complete machine manufacturers.....		(X)	(D)	(X)	
35790 00	Office machines, n.e.c., n.s.k., for establishments with 10 employees or more. (See note.).....		(X)	11.7	(X)	15.7
35790 02	Office machines, n.e.c., n.s.k., for establishments with less than 10 employees. (See note.).....		(X)	6.3	(X)	3.1

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The product class structure of this industry has been significantly changed effective in 1972.

<sup>2</sup>The total value of shipments of electronic computing equipment includes extensive duplication resulting from the use of products of some establishments in the industry as materials by others within the same industry.

<sup>3</sup>The data for 1972 and 1967 present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series. The product detail as shown are those collected on the CIR form specified.

<sup>4</sup>Some equipment in this product class may be leased rather than sold outright. For leased equipment, estimates of the value of products produced were reported. These estimates approximate the value of the products had they been sold outright, and are based on market values of the products, tax or insurance valuations, etc.

<sup>5</sup>The totals shown for product class 35731 for 1972 are not directly comparable to those shown for 1967. For 1972, data are shown for electronic computers in product class 35731 and information for peripheral equipment for electronic computers is shown in product class 35732. Comparable data prior to 1972 are not available.

<sup>6</sup>In 1967, data were not collected separately. These data are included in parts and attachments for electronic computers.

<sup>7</sup>Data for 1972 product code 35741 00, adding and calculating machines, include data for product codes 35743 00, accounting machines and cash registers; and 35745 10, parts and attachments for adding, calculating, and accounting machines, and cash registers produced by complete machine manufacturers.

<sup>8</sup>Data for 1967 for product code 35741 00, adding and calculating machines, include data for product codes 35742 00, electronic calculating machines; and 35743 00, accounting machines and cash registers. These are census of manufactures values.

<sup>9</sup>Data for 1967 for product code 35745 10 include product codes 35742 36-38, 35743 11, 51, 53, 61, and 95. These are values as reported in the Current Industrial Reports series program.

<sup>10</sup>For 1967, data for product codes 35793 00, duplicating machines; 35794 00, dictating, transcribing, and recording machines; and 35795 00, mailing, letter handling, and addressing machines are included in product code 35796 00, all other office machines, n.e.c.

<sup>11</sup>For 1967, data for product code 35793 19, other duplicating machines, including gelatin and ribbon and ink, are included with product code 35796 98, all other office machines, n.e.c., as reported in the annual survey, MA-35R.

<sup>12</sup>For 1972, data for product code 35794 00, dictating, transcribing, and recording machines, are included with product code 35796 00, all other office machines, n.e.c.

<sup>13</sup>For 1972, data for all dictating, transcribing, and recording machines, and for electric stapling machines are included with product code 35796 00, all other office machines, n.e.c., as reported in the annual survey, MA-35R.

<sup>14</sup>These products were previously identified as product class 35720.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9  
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9  
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9  
GG.....\$50.0 and over

- Represents zero. (NA) Not available.

<sup>1</sup>The 1967 product class data are not comparable. Products shifting into or out of this class of product account for more than 15 percent of shipments at the U.S. level.

TABLE 6C. Product Classes—Value Shipped by All Manufacturing Establishments:  
1958, 1963, 1967 to 1972

(In millions of dollars)

35798	Parts and attachments for dictating, duplicating, and other office machines.....	(D)							
35790	Office machines, n.e.c., n.s.k.....	18.0							

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

<sup>2</sup>The product class structure for this industry has been significantly changed effective in 1972.

<sup>3</sup>Data for 1972 product code 35741 00, adding and calculating machines, include data for product codes 35743 00, accounting machines and cash registers; and 35745 00, parts and attachments for adding, calculating, and accounting machines, and cash registers.

<sup>4</sup>These products were previously identified as product class 35720.

<sup>5</sup>For 1972, data for product code 35794 00, dictating, transcribing, and recording machines, are included with product code 35796 00, all other office machines, n.e.c., to avoid disclosing data for individual companies.

# EXPLANATORY TEXT

## SERVICE INDUSTRY MACHINES AND MACHINE SHOPS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

- 3581—Automatic Merchandising Machines
- 3582—Commercial Laundry, Dry Cleaning, and Pressing Machines\*
- 3585—Air-Conditioning and Warm Air Heating Equipment and Commercial and Industrial Refrigeration Equipment\*
- 3586—Measuring and Dispensing Pumps
- 3589—Service Industry Machinery, N.E.C.
- 3592—Carburetors, Pistons, Piston Rings, and Valves\*
- 3599—Machinery, Except Electrical, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## INDUSTRY 3581.—AUTOMATIC MERCHANDISING MACHINES

This industry comprises establishments primarily engaged in manufacturing automatic merchandising units, also referred to as vending machines (excluding music, amusement, or gaming machines), and coin-operated mechanisms for such machines.

---

\*Note that the "short title" for this industry is used throughout the report.

For a detailed list of products of industry 3581, refer to table 6A, product codes 35811 00 to 35812 69.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Automatic Merchandising Machines Industry in 1972 totaled \$324 million. This included shipments of automatic merchandising machines (primary products) valued at \$293 million, shipments of other products (secondary products) valued at \$18 million, and miscellaneous receipts (mainly resales) of \$13 million.

Shipments of automatic merchandising machines (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent.

Shipments of automatic merchandising machines (primary products) from establishments classified in industry 3581 in 1972 represented 96 percent (coverage ratio) of these products valued at \$306 million shipped by all industries. In 1967, the coverage ratio was 88 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3581, these establishments accounted for 6 percent of value of shipments.

## INDUSTRY 3582.—COMMERCIAL LAUNDRY EQUIPMENT (Short Title)

This industry comprises establishments primarily engaged in manufacturing laundry and dry cleaning equipment and pressing machines for commercial and industrial use.

Establishments primarily engaged in manufacturing household laundry equipment, including coin-operated washers and dryers, are classified in industry 3633 (Household Laundry Equipment). For a detailed list of products of industry 3582, refer to table 6A, product codes 35820 13 to 35820 91.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been changed from the previous classification system. Data for coin-operated washers and dryers, under 10-lb load, and parts and attachments for these products have been moved to industry 3633, Household Laundry Equipment.

Value of shipments and other receipts of the Commercial Laundry Equipment Industry in 1972 totaled \$157 million. This included shipments of commercial laundry equipment (primary products) valued at \$131 million, shipments of other products (secondary products) valued at \$13 million, and miscellaneous receipts (mainly resales) of \$13 million.

Shipments of commercial laundry equipment (primary products) in 1972 represented 91 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 92 percent. Secondary products shipped by this industry in 1972 consisted mainly of household laundry equipment (\$4 million).

Shipments of commercial laundry equipment (primary products) from establishments classified in industry 3582 in 1972 represented 70 percent (coverage ratio) of these products valued at \$185 million shipped by all industries. In 1967, the coverage ratio was 79 percent. Other industries shipping commercial laundry equipment consisted mainly of industry 3633, Household Laundry Equipment (\$38 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3582, these establishments accounted for 4 percent of value of shipments.

#### **INDUSTRY 3585.—REFRIGERATION AND HEATING EQUIPMENT (Short Title)**

This industry comprises establishments primarily engaged in manufacturing refrigeration equipment and systems and similar equipment for commercial and industrial use; complete air-conditioning units for domestic, commercial, and industry use; and warm air furnaces, except electric. This industry also includes establishments primarily engaged in manufacturing soda fountains and beer dispensing equipment. Humidifiers and dehumidifiers, except for rooms, are also classified in this industry.

Establishments primarily engaged in manufacturing household refrigerators and home and farm freezers are classified in industry 3632 (Household Refrigerators and Freezers); electric air space heaters in industry 3634 (Electric Housewares and Fans); and electric warm air furnaces and other electric comfort heating equipment in industry 3699 (Electrical Equipment and Supplies, N.E.C.). For a detailed list of products of industry 3585, refer to table 6A, product codes 35851 00 to 35858 73.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number

from the previous classification, but were significantly changed in comparison with data classified by the previous system. Warm air furnaces, formerly included in industry 3433, Heating Equipment, Except Electric, are now included in this industry.

Value of shipments and other receipts of the Refrigeration and Heating Equipment Industry in 1972 totaled \$7,084 million. This included shipments of refrigeration and heating equipment (primary products) valued at \$5,635 million, shipments of other products (secondary products) valued at \$1,053 million, and miscellaneous receipts (mainly resales) of \$395 million.

The total cost of materials and total value of shipments of the Refrigeration and Heating Equipment Industry include extensive duplication resulting from the intraindustry shipments of certain products by some establishments for use as materials by others. For this reason, the "primary product specialization ratio," a measure of the extent to which plants classified in an industry "specialize" in making the products regarded as primary to the industry, has not been computed precisely. The ratio, however, is between 80 and 100 percent. Since this duplication is also included in the value of shipments, the coverage ratio for this industry has not been computed.

Industry 3585 contains two major establishment types. One group of establishments specializes primarily in the manufacture of compressors, condensers, and other components for air-conditioning and commercial refrigeration. Many of these establishments also produce complete air-conditioning equipment as well as subassemblies for air-conditioning and commercial refrigeration equipment. These establishments also rely on other establishments for their motors and other electrical equipment.

The other major segment of industry 3585 covers the production of commercial refrigeration equipment such as walk-in and reach-in refrigerators, display cases for meat, dairy, and other food products, low-temperature freezing and dispensing equipment, florist cabinets, etc. Although significant amounts of metal are consumed in the manufacture of these products, many of these items contain substantial amounts of wood, glass, and other nonmetallic materials. Some types of commercial refrigeration equipment are shipped from the factory without compressors, condensing units, or refrigeration equipment. These "remote-type units" are then installed at the site with the suitable refrigeration components.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 24 percent of the total industry shipments are represented by plants specializing in product class 35852, unitary air-conditioners; 27 percent in 35851, heat-transfer equipment, except room and unitary air-

conditioners and dehumidifiers; and 5 percent in 35856, room air-conditioners and dehumidifiers.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3585, these establishments accounted for 2 percent of value of shipments.

#### **INDUSTRY 3586.—MEASURING AND DISPENSING PUMPS**

This industry comprises establishments primarily engaged in manufacturing measuring and dispensing pumps commonly used in service and filling stations for dispensing gasoline, oil, and grease, including grease guns.

Establishments primarily engaged in manufacturing pumps and pumping equipment for general industrial use are classified in industry 3561 (Pumps and Pumping Equipment). For a detailed list of products of industry 3586, refer to table 6A, product codes 35860 11 to 35860 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Measuring and Dispensing Pumps Industry in 1972 totaled \$232 million. This included shipments of measuring and dispensing pumps (primary products) valued at \$152 million, shipments of other products (secondary products) valued at \$62 million, and miscellaneous receipts (mainly resales) of \$18 million.

Shipments of measuring and dispensing pumps (primary products) in 1972 represented 71 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 71 percent.

Shipments of measuring and dispensing pumps (primary products) from establishments classified in industry 3586 in 1972 represented 83 percent (coverage ratio) of these products valued at \$183 million shipped by all industries. In 1967, the coverage ratio was 80 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3586, these establishments accounted for 1 percent of value of shipments.

#### **INDUSTRY 3589.—SERVICE INDUSTRY MACHINERY, N.E.C.**

This industry comprises establishments primarily engaged in manufacturing machines and equipment, not elsewhere classified, for use in service industries, such as floor-sanding machines, industrial vacuum cleaners, scrubbing machines, commercial cooking and food warming equipment, and commercial dishwashing machines.

Establishments primarily engaged in manufacturing household electrical appliances are classified in SIC group 363. For a detailed list of products of industry 3589, refer to table 6A, product codes 35891 11 to 35893 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Service Industry Machinery, N.E.C., Industry in 1972 totaled \$901 million. This included shipments of service industry machinery, n.e.c., (primary products) valued at \$748 million, shipments of other products (secondary products) valued at \$86 million, and miscellaneous receipts (mainly resales) of \$66 million.

Shipments of service industry machinery, n.e.c., (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 89 percent.

Shipments of service industry machinery, n.e.c., (primary products) from establishments classified in industry 3589 in 1972 represented 87 percent (coverage ratio) of these products valued at \$864 million shipped by all industries. In 1967, the coverage ratio was 88 percent. Other industries shipping service industry machinery, n.e.c., consisted mainly of industry 3569, General Industrial Machinery, N.E.C., (\$26 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3589, these establishments accounted for 8 percent of value of shipments.

#### **INDUSTRY 3592.—CARBURETORS, PISTONS, RINGS, VALVES (Short Title)**

This industry comprises establishments primarily engaged in manufacturing carburetors, pistons, piston rings, and valves. Establishments primarily engaged in manufacturing metallic packing are classified in industry 3293 (Gaskets, Packing and Sealing Devices); and those primarily engaged in manufacturing machinery repair and equipment parts (except electric) on a

job or order basis for others are classified in industry 3599. For a detailed list of products of industry 3592, refer to table 6A, product codes 35921 11 to 35923 63.

The statistics for this industry, as classified under the 1972 edition of the SIC manual constitute a new industry. Carburetors, pistons, piston rings, and valves were formerly included in industry 3599, Machinery, Except Electrical, N.E.C.

Value of shipments and other receipts of the Carburetors, Pistons, Rings, Valves Industry in 1972 totaled \$744 million. This included shipments of carburetors, pistons, rings, and valves (primary products) valued at \$589 million, shipments of other products (secondary products) valued at \$142 million, and miscellaneous receipts (mainly resales) of \$13 million.

Shipments of carburetors, pistons, rings, and valves (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of motor vehicle parts and accessories (\$91 million) and aluminum foundries (\$9 million).

Shipments of carburetors, pistons, rings, and valves (primary products) from establishments classified in industry 3592 in 1972 represented 74 percent (coverage ratio) of these products valued at \$792 million shipped by all industries. Other industries shipping carburetors, pistons, rings, and valves consisted mainly of industry 3714, Motor Vehicle Parts and Accessories (\$8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3592, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3599.—MACHINERY, EXCEPT ELECTRICAL, N.E.C.**

This industry comprises establishments primarily engaged in manufacturing machinery and parts except electrical, not else-

where classified, such as amusement park equipment, pneumatic and hydraulic cylinders, and flexible metal hose and tubing. This industry also includes establishments primarily engaged in producing or repairing machine and equipment parts, not elsewhere classified, on a job or order basis for others.

Establishments primarily engaged in manufacturing metallic packing, formerly classified in this industry, are classified in industry 3293 (Gaskets, Packing and Sealing Devices). For a detailed list of products of industry 3599, refer to table 6A, product codes 35992 42 to 35995 11.

The code number for this industry in the 1972 edition of the SIC is unchanged, but the content of this industry has been changed. Data for carburetors, pistons, piston rings, and valves have been moved to create new industry 3592.

Value of shipments and other receipts of the Machinery, Except Electrical, N.E.C., Industry in 1972 totaled \$3,660 million. This included shipments of machinery, except electrical, n.e.c., (primary products) valued at \$3,154 million, shipments of other products (secondary products) valued at \$239 million, and miscellaneous receipts (mainly contract work) of \$266 million.

Shipments of machinery, except electrical, n.e.c. (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 93 percent.

Shipments of machinery, except electrical, n.e.c., (primary products) from establishments classified in industry 3599 in 1972 represented 94 percent (coverage ratio) of these products valued at \$3,363 million shipped by all industries. In 1967, the coverage ratio was also 94 percent. Other industries shipping machinery, except electrical, n.e.c., consisted mainly of industry 3561, Pumps and Pumping Equipment, \$23 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3599, these establishments accounted for 29 percent of value of shipments.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 3581	Industry 3582	Industry 3585	Industry 3586	Industry 3589	Industry 3592	Industry 3599
1972.....	116	100	655	54	666	98	16,217
1967.....	143	109	(NA)	46	554	(NA)	15,055
1963.....	148	107	(NA)	42	496	(NA)	12,032

(NA) Not available. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

<sup>2</sup>The change in coverage ratio for industry 3582 between 1963 and 1967 results largely from separately identifying coin-operated washer extractor and drying tumblers for commercial laundry equipment. Most of these products were produced by establishments classified in other industries. For 1972, coin-operated washers and dryers, under 10-lb. load, and parts and attachments for these products have been moved from industry 3582 to 3633, Household Laundry Equipment.

<sup>3</sup>The value of shipments and cost of materials for this industry include extensive duplication arising from shipments between establishments in the same industry classification. Accordingly, the specialization and coverage ratios are not shown.

<sup>4</sup>Data on this new industry for 1967, 1963, and 1958 were derived by adding general statistics for former industry 3585, Refrigeration Machinery, with data for product class 34332 from Table 8, "General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization," in Volume II of the 1967, 1963, and 1958 Censuses of Manufactures.

<sup>5</sup>Prior to 1972, industry 3592 was a part of industry 3599.

<sup>6</sup>In 1967 a number of establishments performing "machine shop jobwork" which had previously been classified in other industries were classified in this industry. This change in classification resulted mainly from the fact that a separate product code for such work was introduced in the 1967 Census of Manufactures. Between \$400 and \$600 million in value of shipments was accounted for by establishments which had been classified in other industries in prior years.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee  (dollars)	Assets per employee  (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(NA) Not available.      (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

TABLE 3. Detailed Statistics: 1972

(Z) Less than half of the unit of measurement shown.

<sup>1</sup>The proportion of product shipments (both primary and secondary) of the industry represented by primary products.<sup>2</sup>The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.<sup>3</sup>The specialization and coverage ratios are not shown for industry 3585 as the data from which these ratios are obtained include extensive duplication because the products of some establishments in the industry are consumed as materials by other establishments in the industry.

TABLE 4. General Statistics, by Employment Size of Establishment: 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment—generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

(D) Withheld to avoid disclosing figures for individual companies.

**TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967**

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscellaneous receipts	Primary product specialization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

(NA) Not available.

<sup>1</sup>The total value of shipments of refrigeration and heating equipment includes extensive duplication resulting from the use of products of certain establishments as materials by others within the same industry. Accordingly, the specialization and coverage ratios have not been calculated.

**TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972**

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

35994 11	Copper and copper-base alloy.....	25.5	97.6
35994 13	Aluminum and aluminum-base alloy.....	3.6	
35994 19	Other.....	59.3	
35994 25	Metal bellows.....	16.2	13.9
35994 31	Carnival and amusement park equipment (ferris wheels, merry-go-rounds, etc.), excluding coin-operated amusement machines.....	20.7	547.0
35994 98	Other miscellaneous machinery products.....	262.1	
35994 00	Miscellaneous machinery products, including flexible metal hose and tubing, metal bellows, etc., n.s.k.....	55.1	
35995 11	Receipts for machine shop jobwork <sup>19</sup> .....	1,425.8	1,080.0
35990 00	Miscellaneous machinery, except electrical, n.e.c., for establishments with 10 employees or more. (See note.).....	670.8	561.9
35990 02	Miscellaneous machinery, except electrical, n.e.c., for establishments with less than 10 employees. (See note.).....	635.0	281.3

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The data for 1972 and 1967 present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series. The product detail as shown are those collected on the CIR form specified.

<sup>2</sup>See table 6A-2 for more detailed product data.

<sup>3</sup>Not comparable to 1972 data because of the inclusion in 1967 of coin-operated washer-extractor combinations and drying tumblers of 10-pound loads and under, and parts, attachments, and accessories for coin-operated washer-extractor combinations and drying tumblers. 1972 preliminary shipments for these products are shown in industry 3633 as follows: Washer-extractor combinations, 119.4-thousand units valued at \$21.3 million; drying tumblers, less than \$4.2 million; and parts, attachments, and accessories, \$8.1 million.

<sup>4</sup>The total value of shipments of refrigeration machinery includes extensive duplication resulting from the use of products of some establishments in the industry as materials by others within the same industry.

<sup>5</sup>The product class structure for this industry was revised, effective in 1972.

<sup>6</sup>Data reported in the census of manufactures may differ from comparable figures reported in Current Industrial Reports series MA-35M. The census of manufactures represents total factory shipments, whereas MA-35M figures do not include consignment or warehouse shipments until the time of the final sale, and interplant transfers.

<sup>7</sup>See tables 6A-3 and 6A-8 for detailed product data.

<sup>8</sup>See table 6A-4 for detailed product data.

<sup>9</sup>For 1972, product code 35853 36, Ice cream counter freezers, are included with product code 35853 98 to avoid disclosing the operations of individual companies.

<sup>10</sup>See tables 6A-5 and 6A-6 for detailed product data.

<sup>11</sup>See table 6A-7 for detailed product data.

<sup>12</sup>This figure was derived rather than reported directly in the 1967 census; it was included in 1967 in product classes 35851 and 35852.

<sup>13</sup>See table 6A-9 for detailed product data.

<sup>14</sup>Twin pumps are counted as one unit.

<sup>15</sup>1967 data for product code 35892 61, "Carpet sweepers, commercial type," are included with product code 35892 91, "Other industrial and commercial service machines," to avoid disclosing figures for individual companies.

<sup>16</sup>Industry 3592 is a new industry for 1972; it is made up of the 1967 product class 35991, Carburetors (new), pistons, and piston rings and valves, and the 1967 product code 35992 71, Carburetors, rebuilt, all types.

<sup>17</sup>Data are limited to rebuilding on a factory basis. Rebuilding operations performed in service garages, etc., are excluded from the census of manufactures. Also, these figures may be somewhat understated because of the exclusion of data for establishments with less than 10 employees. Such establishments were typically not included in the mail portion of the census of manufactures, but were included in the published data by the use of estimates from administrative records. These estimates are included in the value shown for product code 35990 02. Although the use of such administrative records tends to create a small understatement for most specific products, the effect is more significant for those products typically produced in small establishments, such as rebuilding facilities.

<sup>18</sup>In 1967, data for old product code 35992 21, Metallic and semimetallic packing, were included in this industry and the value was \$10.2 million. For 1972, these data are included in industry 3293, Gaskets, Packing, and Sealing Devices, and amount to \$55.0 million.

<sup>19</sup>This value consists principally of receipts for work done on materials owned by others. The 1967 value included approximately \$40 million of such receipts reported by establishments classified in industries other than industry 3599. There may be additional values of such work done by other industries reported as miscellaneous receipts rather than as "machine shop jobwork." Comparable data for 1972 will be available in the final report for industry 3599.

TABLE 6A-2. Quantity and Value of Shipments of Coin-Operated Vending Machines: 1972 and 1967

1972 product code	Product	1972		1967	
		Number of machines	Value (\$1,000)	Number of machines	Value (\$1,000)

35811 39	All other vending machines except for beverages, confections, and foods <sup>5</sup> .....	64,845	3,207	93,109	3,403

<sup>1</sup>These are primarily coffee vending machines though they may also vend hot chocolate and/or hot soup from the same cabinet.

<sup>2</sup>Some vending machines designed and sold to handle bottled soft drinks are also adaptable to canned beverages through the use of a conversion kit. For this reason, the number of factory shipped dispensers for canned beverages may be somewhat less than the number of vending machines put into service.

<sup>3</sup>Includes package milk (indoor and outdoor); milk (bulk or cup); beverage combination (hot and cold); hot beverages such as hot chocolate and/or hot soup (except canned soup) not sold in a combination machine with coffee; and packaged dry ingredients for mixing into beverages.

<sup>4</sup>Includes vending machines for such commodities as apples, cookies, crackers, biscuits, popcorn, ice cream, and packaged chewing gum, as well as multipurpose (refrigerated and nonrefrigerated) vending machines.

<sup>5</sup>Includes vending machines for such products as cosmetics and toiletries, novelties, detergents, newspapers, and stationery supplies.

(X) Not applicable. (NA) Not available.

<sup>1</sup>Defined as factory selected combinations of heating and cooling components or assemblies intended to serve an individual room and comprised of (1) heating assembly available with element for use with hot water, steam, and electricity; means for forced heated air circulation and distribution; integral or remote temperature controls; (2) slide-in cooling section with complete refrigerant cycle; (3) room cabinet; (4) provision for outdoor air intake and discharge and accessories, as required, for mounting in a building wall; (5) provisions for air filtration and ventilation; (6) permanent individual branch circuit wiring with a suitable line cord or terminating at a junction box within the room cabinet; and (7) provision for free conditioned-air distribution, or when forced circulation is employed, for minimal duct work having a total external static resistance not exceeding 1/10-inch water.

(D) Withheld to avoid disclosing figures for individual companies. In some cases figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher-level totals or from related figures.

<sup>1</sup>Both quantity and value figures exclude systems assembled from purchased components and installed at passenger automobile assembly lines. In addition, for the systems shown, the values are understated because of the exclusion of compressors for some systems. The value understatement, for this reason, is between 25 and 50 percent.

<sup>2</sup>Towers which are prefabricated and shipped either as a factory-assembled section or as major components for assembly at the site of the installation.

<sup>3</sup>Data for product code 35851 93, Field assembled, mechanical-draft type, factory-fabricated water-cooling towers (20.1 tons and over), are included with product code 35851 95, Factory assembled, mechanical-draft type, factory-fabricated water-cooling towers (20.1 tons and over).

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9  
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9  
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9  
GG.....\$50.0 and over

- Represents. (NA) Not available.

<sup>1</sup>The individual product codes included in this class of product for 1972 differ significantly from prior years. Products shifting into or out of this class of product represent more than 15 percent of the total shipments at the U.S. level.

<sup>2</sup>The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 5 percent of the total 1967 shipments at the U.S. level. The difference in product class 35858 for 1967 between table 6B and tables 6A and 6C represents parts for warm air furnaces.

- Represents zero.

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

<sup>2</sup>The individual product codes included in this class of product for 1972 differ significantly from prior years. Products shifting into or out of this class of product represent more than 15 percent of the total shipments value at the U.S. level.

<sup>3</sup>Excludes parts for warm air furnaces.

<sup>4</sup>Excludes rebuilt carburetors, which were previously classified in industry 3599.

<sup>5</sup>Included with 35990, "Machinery, except electrical, n.e.c., n.s.k."

<sup>6</sup>Includes rebuilt carburetors.

<sup>7</sup>Includes metallic and semimetallic packing (except asbestos-metallic).

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>Includes cost for materials indicated by the symbol (D).<sup>2</sup>Excludes quantities produced and consumed in the same establishment.<sup>3</sup>This item represents the total cost of materials for establishments that did not report detailed materials data. Also includes estimates for companies that were not mailed report forms.<sup>4</sup>Includes extensive duplication because the products of some establishments are consumed as materials by other establishments in the same industry.<sup>5</sup>1967 materials consumed data are included with industry 3599.<sup>6</sup>1972 data for aluminum sheet, plate, and foil are included with all other aluminum mill shapes and forms.

	Total energy used for heat and power.....	Bil. kWh equiv....	9.9	-

Note: In 1967, data for manufactured mixed gas, blast furnace gas, and coke oven gas were included in code 131300, natural gas. In 1971, data for these gases were included in code 960011, other fuels.

- Represents zero. (X) Not applicable. (S) Withheld because the estimates did not meet publication standards.  
(Z) Less than half of the unit of measurement shown.

---

## MAJOR GROUP 36

### Electric and Electronic Equipment

- 36A Electrical measurement and distribution equipment
- 36B Household appliances
- 36C Electric lighting and wiring equipment
- 36D Communication equipment, including radio and TV, and electronic components and accessories
- 36E Miscellaneous electrical equipment and supplies

This major group includes establishments engaged in manufacturing machinery, apparatus, and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy. The manufacture of household appliances is included in this group, but industrial machinery and equipment powered by built-in or detachable electric motors is classified in Major Group 35. Establishments primarily engaged in manufacturing instruments for indicating, measuring, and recording electrical quantities are classified in industry 3825.

(X) Not applicable. (NA) Not available.

<sup>1</sup>The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

<sup>2</sup>For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.

<sup>3</sup>The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

<sup>4</sup>The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.

<sup>5</sup>Data for 1972 are not directly comparable to 1971 and earlier years. See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.

<sup>6</sup>Data for 1947, 1954, and later years, exclude establishments primarily engaged in the manufacture of automatic temperature controls, whereas data for 1949 to 1953 include these establishments.

<sup>7</sup>In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, 1968 to 1971, and prior to 1949.

Footnotes continued on next page.

TABLE 1. General Statistics: 1972 and Earlier Years—Continued

(Footnotes for table 1)—Continued

<sup>9</sup>Figure for 1958 to 1971 for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial Classification system. Prior to 1958, data exclude establishments primarily engaged in the manufacture of household ranges and ovens; household refrigerator and home and farm freezers; household laundry equipment; household vacuum cleaners; sewing machine; water heaters, except electric; and other household appliance. Establishments primarily engaged in the manufacture of hearing aids; high frequency, induction, and dielectric heating apparatus; commercial food warming equipment; industrial electric heating units and devices; and insulated wire and cable made from purchased wire, are included in data prior to 1958.

<sup>10</sup>These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufacture. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufacture volumes for this period.

<sup>11</sup>Data for 1939 and earlier years exclude establishments primarily engaged in the manufacture of electric (dry) shavers.

<sup>12</sup>Figures for 1937 and earlier years include data for establishments primarily engaged in the manufacture of vacuum cleaners, turbo-generator and water-wheel generator sets, dictating machine, and electric industrial furnace and ovens. Value added for 1939 on a basis comparable with earlier years was \$1,000 million.

<sup>13</sup>The figures for 1933 and earlier years include data for establishments primarily engaged in the manufacture of certain types of beauty and barber shop equipment classified for later years in the "Miscellaneous manufactures" industries.

<sup>14</sup>The figures for 1925 and earlier years include data for establishments primarily engaged in the manufacture of certain types of mechanical refrigerator, classified for later years in the machinery (except electrical) industries.

<sup>15</sup>The figures for 1899 and 1904 include data for establishments primarily engaged in the manufacture of signs and advertising novelties, classified for later years in the "Miscellaneous manufactures" industries.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

<sup>2</sup>The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

# EXPLANATORY TEXT

## ELECTRICAL MEASUREMENT AND DISTRIBUTION EQUIPMENT

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

3612—Power, Distribution, and Specialty Transformers\*  
3613—Switchgear and Switchboard Apparatus  
3621—Motors and Generators  
3622—Industrial Controls  
3623—Welding Apparatus, Electric  
3624—Carbon and Graphite Products  
3629—Electrical Industrial Apparatus, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry, and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

### INDUSTRY 3612.—TRANSFORMERS (Short Title)

This industry comprises establishments primarily engaged in manufacturing power, distribution, instrument, and specialty transformers.

Establishments primarily engaged in manufacturing radio frequency or voice frequency transformers, coils, or chokes are classified in industry 3677, and resistance welder transformers in industry 3623.

The classification of establishments for which data are tabulated in this industry is based upon the definitions and

---

\*Note that the "short title" for this industry is used throughout the report.

coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been slightly changed from the previous classification system. Instrument transformers, previously classified in industry 3611, are now included in this industry.

For a detailed list of products of industry 3612, refer to table 6A, product codes 36122 02 to 36122 38.

Value of shipments and other receipts of the Transformers Industry in 1972 totaled \$1,462 million. This included shipments of transformers (primary products) valued at \$1,387 million, shipments of other products (secondary products) valued at \$55 million, and miscellaneous receipts of \$19 million.

Shipments of transformers (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 95 percent.

Shipments of transformers (primary products) from establishments classified in industry 3612 in 1972 represented 97 percent (coverage ratio) of these products valued at \$1,436 million shipped by all industries. In 1967, the coverage ratio was 98 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3612, these establishments accounted for 1.3 percent of value of shipments.

### INDUSTRY 3613.—SWITCHGEAR AND SWITCHBOARD APPARATUS

This industry comprises establishments primarily engaged in manufacturing switchgear and switchboard apparatus. Important products of this industry include power switches, circuit breakers, power switching equipment, and similar switchgear for general industrial application; switchboards and cubicles, control and metering panels, powerfuse mountings, and similar switchboard apparatus and supplies.

Establishments primarily engaged in manufacturing industrial controls are classified in industry 3622, and those

manufacturing current-carrying wiring devices in industry 3643.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

For a detailed list of products of industry 3613, refer to table 6A, product codes 36131 11 to 36137 03.

Value of shipments and other receipts of the Switchgear and Switchboard Apparatus Industry in 1972 totaled \$2,115 million. This included shipments of switchgear and switchboard apparatus (primary products) valued at \$1,840 million, shipments of other products (secondary products) valued at \$183 million, and miscellaneous receipts (mainly resales) of \$91 million.

Shipments of switchgear and switchboard apparatus (primary products) in 1972 represented 91 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 89 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial controls (\$68 million).

Shipments of switchgear and switchboard apparatus (primary products) from establishments classified in industry 3613 in 1972 represented 89 percent (coverage ratio) of these products valued at \$2,059 million shipped by all industries. In 1967, the coverage ratio was 90 percent. Other industries shipping switchgear and switchboard apparatus consisted mainly of industry 3622, Industrial Controls, (\$77 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3613, these establishments accounted for 2.0 percent of value of shipments.

#### INDUSTRY 3621.—MOTORS AND GENERATORS

This industry comprises establishments primarily engaged in manufacturing electric motors (except starting motors) and power generators; motor generator sets; railway motors and control equipment; and motors, generators, and control equipment for gasoline, electric, and oil-electric buses and trucks.

Establishments primarily engaged in manufacturing turbo-generators are classified in industry 3511, and starting motors and battery-charging generators for internal combustion engines are classified in industry 3694.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

For a detailed list of products of industry 3621, refer to table 6A, product codes 36211 01 to 36219 11.

Value of shipments and other receipts of the Motors and Generators Industry in 1972 totaled \$2,516 million. This included shipments of motors and generators (primary products) valued at \$2,145 million, shipments of other products (secondary products) valued at \$216 million, and miscellaneous receipts of \$155 million.

Shipments of motors and generators (primary products) in 1972 represented 91 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 83 percent.

Shipments of motors and generators (primary products) from establishments classified in industry 3621 in 1972 represented 81 percent (coverage ratio) of these products valued at \$2,636 million shipped by all industries. In 1967, the coverage ratio was 83 percent. Other industries shipping motors and generators consisted mainly of industry 3519 (\$85 million) and industry 3694 (\$81 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3621, these establishments accounted for 1.5 percent of value of shipments.

#### INDUSTRY 3622.—INDUSTRIAL CONTROLS

This industry comprises establishments primarily engaged in manufacturing motor starters and controllers, control accessories, electronic controls, and other industrial controls.

Establishments primarily engaged in manufacturing automatic temperature controls are classified in industry 3822 and industrial process instruments in industry 3823.

The classification of establishments for which data are tabulated in this report is based upon the definitions and

coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

For a detailed list of products of industry 3622, refer to table 6A, product codes 36220 12 to 36220 99.

Value of shipments and other receipts of the Industrial Controls Industry in 1972 totaled \$1,373 million. This included shipments of industrial controls (primary products) valued at \$1,044 million, shipments of other products (secondary products) valued at \$271 million, and miscellaneous receipts (mainly resales) of \$58 million.

Shipments of industrial controls (primary products) in 1972 represented 79 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 83 percent. Secondary products shipped by this industry in 1972 consisted mainly of switchgear and switchboard apparatus (\$76.9 million).

Shipments of industrial controls (primary products) from establishments classified in industry 3622 in 1972 represented 84 percent (coverage ratio) of these products valued at \$1,246 million shipped by all industries. In 1967, the coverage ratio was 81 percent. Other industries shipping industrial controls consisted mainly of industry 3613, Switchgear and Switchboard Apparatus, (\$68 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3622, these establishments accounted for 4.0 percent of value of shipments.

#### INDUSTRY 3623.—WELDING APPARATUS, ELECTRIC

This industry comprises establishments primarily engaged in manufacturing electric welding apparatus and accessories.

This industry also includes establishments primarily engaged in coating welding wire from purchased wire or from wire drawn in the same establishment.

Establishments primarily engaged in manufacturing gas welding apparatus are classified in industry 3549, and laser, electron beam, and ultrasonic welding machines and equipment in industry 3662.

The classification of establishments for which data are tabulated in this report is based upon the definitions and

coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

For a detailed list of products of industry 3623, refer to table 6A, product codes 36231 11 to 36233 81.

Value of shipments and other receipts of the Welding Apparatus, Electric, Industry in 1972 totaled \$660 million. This included shipments of electric welding apparatus (primary products) valued at \$524 million, shipments of other products (secondary products) valued at \$98 million, and miscellaneous receipts of \$37 million.

Shipments of electric welding apparatus (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 91 percent.

Shipments of electric welding apparatus (primary products) from establishments classified in industry 3623 in 1972 represented 92 percent (coverage ratio) of these products valued at \$570 million shipped by all industries. In 1967, the coverage ratio was 94 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3623, these establishments accounted for 2.7 percent of value of shipments.

#### INDUSTRY 3624.—CARBON AND GRAPHITE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing lighting carbons; carbon, graphite, and metal-graphite brushes and brush stock; carbon or graphite electrodes for thermal and electrolytic uses; and other carbon, graphite, and metal-graphite products.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

For a detailed list of products of industry 3624, refer to table 6A, product codes 36241 52 to 36249 89.

Value of shipments and other receipts of the Carbon and Graphite Products Industry in 1972 totaled \$377 million. This included shipments of carbon and graphite products (primary products) valued at \$329 million, and shipments of other products (secondary products) and miscellaneous receipts at \$48.8 million.

Shipments of carbon and graphite products (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent.

Shipments of carbon and graphite products (primary products) from establishments classified in industry 3624 in 1972 represented 98 percent (coverage ratio) of these products valued at \$336 million shipped by all industries. In 1967, the coverage ratio was 96 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3624, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3629.—ELECTRICAL INDUSTRIAL APPARATUS, N.E.C.**

This industry comprises establishments primarily engaged in manufacturing industrial and commercial electric apparatus and equipment, not elsewhere classified, such as blasting machines, fixed and variable capacitors, condensers, and rectifiers for industrial applications.

Establishments primarily engaged in manufacturing condensers, capacitors, and rectifiers for electronic end products

are classified in SIC group 367, Electronic Components and Accessories.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

For a detailed list of products of industry 3629, refer to table 6A, product codes 36291 11 to 36293 98.

Value of shipments and other receipts of the Electrical Industrial Apparatus, N.E.C., Industry in 1972 totaled \$450 million. This included shipments of electrical industrial apparatus, n.e.c., (primary products) valued at \$355 million, shipments of other products (secondary products) valued at \$63 million, and miscellaneous receipts of \$32 million.

Shipments of electrical industrial products, n.e.c., (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 84 percent.

Shipments of electrical industrial apparatus, n.e.c., (primary products) from establishments classified in industry 3629 in 1972 represented 80 percent (coverage ratio) of these products valued at \$443 million shipped by all industries. In 1967, the coverage ratio was 67 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3629, these establishments accounted for 6.8 percent of value of shipments.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 3612	Industry 3613	Industry 3621	Industry 3622	Industry 3623	Industry 3624	Industry 3629
1972.....	168	463	324	546	154	58	245
1967.....	150	398	320	456	133	49	212
1963.....	144	338	316	421	133	40	226

(NA) Not available. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee  (dollars)	Assets per employee  (dollars)	Production worker as percent of total employment  (percent)	Annual men-hours of production workers  (number)	Average hourly earnings of production workers  (dollars)	Cost of materials per dollar of shipments  (dollars)	Cost of materials and payrolls per dollar shipments  (dollars)	Assets per dollar of shipments  (dollars)	Value added per employee  (dollars)	Payrolls as percent of value added  (percent)	Value added per man-hour of production worker  (dollars)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent<sup>1</sup>

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

(See appendix, Explanation of Terms)

<sup>2</sup>The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balances of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment—generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

See footnote at end of table.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:  
1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio
		(million dollars)	(million dollars)	(million dollars)	(million dollars)	Col. B Col. B & C	(million dollars)	(million dollars)	(million dollars)	Col. B Col. F

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Transformers (SIC 3612)	Switchgear and switchboard apparatus (SIC 3613)	Motors and generators (SIC 3621)	Industrial controls (SIC 3622)	Welding apparatus, electric (SIC 3623)	Carbon and graphite products (SIC 3624)	Electrical industrial apparatus, n.e.c. (SIC 3629)	Other industries

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Transformers (SIC 3612)	Switchgear and switchboard apparatus (SIC 3613)	Motors and generators (SIC 3621)	Industrial controls (SIC 3622)	Welding apparatus, electric (SIC 3623)	Carbon and graphite products (SIC 3624)	Electrical industrial apparatus, n.e.c. (SIC 3629)	Other industries
	Value of receipts of the industry--Continued									
	Other product shipments by 4-digit product group:

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

1972 product code	Product	Total receipts including interplant transfers (million dollars)	
		1972	1967
3613- --	SWITCHGEAR AND SWITCHBOARD APPARATUS, TOTAL.....	2,058.8	1,598.5
	Switchgear, Except Ducts and Relays:		
36131 00	As reported in census of manufactures.....	597.1	445.7
	As reported in Current Industrial Reports Series MA-36A.....	564.1	441.5
36131 11	Automatic and manual panels (generator, transformers, feed-control, etc.).....	33.4	18.1
36131 12	Metal enclosed switchgear (using power circuit breakers, oil and oilless). All voltages above 600 volts up to and including 72 k.v.....	175.3	130.0
36131 13	Metal enclosed low-voltage switchgear assemblies (using power circuit breakers) 600 volts and below	79.9	73.8
36131 17	Metal enclosed bus bar structures, over 750 volts, for sale separately.....	11.1	4.9
36131 31	Relays (except instrument and circuit), regulators, and miscellaneous switchboard devices, for sale separately.....	75.6	60.7
	Power switching equipment (including attachment, auxiliaries, bus supports and fittings, and accessories, but excluding power fuses sold separately):		
36131 41	Outdoor.....	87.1	82.6
36131 45	Indoor.....	5.1	5.9
36131 81	Power and ground connectors generally used in substation construction.....	r 52.0	31.3
36131 91	Overhead transmission and distribution connectors (clamps, taps, terminals, and splices).....		
36131 93	Transmission and distribution connectors, n.e.c., including underground deadends, hotline taps, stirrups, repair sleeves, etc.....	r 31.0	33.8
36131 83	Distribution cut-outs.....		
36131 51	Power and distribution fuses and fuse links for 2,300 volts and over, a.c. service (excluding distribution cut-outs).....	r 13.6	
	Power Circuit Breakers, All Voltages:		
36132 00	As reported in census of manufactures.....	182.7	209.8
	As reported in Current Industrial Reports Series MA-36A.....	186.8	201.0
36132 43	Power circuit breakers (sold separately) and three-phase automatic circuit reclosers (all voltages).....	172.2	201.0
	Low voltage panelboards, distribution boards, and other switching and interrupting devices, 750 volts and under:		
36133 00	As reported in census of manufactures.....	539.0	378.0
	As reported in Current Industrial Reports Series MA-36A.....	555.3	332.8
	Panelboards, including enclosing cabinets:		
36133 11	Fusible, including combination switch and fuse.....	52.8	39.9
36133 12	Circuit breaker.....	78.6	60.8
	Distribution switchboards:		
36133 15	Fusible.....	41.3	25.6
36133 17	Circuit breaker.....	54.4	36.9
36133 19	Other, including theater switchboards.....	12.0	13.7
36133 20	Knife switches, open and enclosed.....	63.1	42.6
	Load centers:		
36133 24	Enclosed fusible, service entrance, and branch circuit cut-outs.....	11.6	9.1
36133 26	Circuit breaker type.....	93.3	31.3
36133 29	Other switches (excluding snap, toggle, push, etc., but including meter service equipment, other than meter mounting and test devices).....	30.6	30.4
36133 98	Other switchgear and switchboard apparatus.....	117.6	42.1
	Fuses and Fuse Equipment, Under 2300 Volts:		
36134 00	As reported in census of manufactures.....	99.7	69.2
	As reported in Current Industrial Reports Series MA-36A.....	92.4	65.3
36134 31	Nonrenewable plug fuses.....	13.5	9.4
36134 51	Nonrenewable cartridge fuses.....	45.3	33.1
36134 71	Renewable plug and cartridge fuses (including renewal links).....	7.6	6.1
36134 93	Other fuses and open fuse material (including cut-outs, clips, bases, etc.).....	26.0	16.5
	Molded Case Circuit Breakers, 750 Volts and Under:		
36135 00	As reported in census of manufactures.....	283.0	170.2
	As reported in Current Industrial Reports Series MA-36A.....	283.1	166.4
36135 11	Industrial type-assembled as complete units in supporting and enclosing housing of insulating materials.....	112.7	122.5
36135 12	Residential or light duty type (primarily for load center application, assembled as complete units in supporting and enclosing housing of insulating materials).....	110.9	
36535 31	Individually enclosed industrial type (excluding panelboards and busway plugs).....	r 25.2	8.8
36135 32	Enclosed individual or group of molded case circuit breakers in a single cabinet intended to function as service equipment.....		
36135 98	Other molded case circuit breakers.....	34.3	35.0

See footnotes at end of table.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

1972 product code	Product	Total receipts including interplant transfers (million dollars)

36293 31	Solenoids (except solenoid-activated regulating valves).....	do.....	(NA)	12.9	1,036.2	16.6
36293 98	Other miscellaneous electrical equipment for industrial use, n.e.c.....		(X)	<sup>r</sup> 72.9	(X)	65.0
36293 00	Other electrical equipment for industrial use, n.s.k.....		(X)	11.5	(X)	11.0
36290 00	Electrical industrial apparatus, n.s.k., for establishments with 10 employees or more. (See note.).....		(X)	25.5	(X)	16.6
36290 02	Electrical industrial apparatus, n.s.k., for establishments with less than 10 employees. (See note.).....		(X)	6.5	(X)	2.8

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.  
(Z) Less than half of the unit of measurement shown (less than 0.1 when rounded). <sup>r</sup>Revised.

<sup>1</sup>Product codes 36125 42 and 36125 53 are combined with product code 36125 98 to avoid disclosing figures for individual companies.

<sup>2</sup>Product code 36125 60 is combined with product code 36125 00 to avoid disclosing figures for individual companies.

<sup>3</sup>Figures for product codes 36212 01 and 36212 48 are combined.

<sup>4</sup>Figures for product codes 36214 31 and 36214 75 are combined.

<sup>5</sup>Quantity reported for 1972 was 64.2 million. A comparable quantity figure for 1967 is not available.

<sup>6</sup>These figures are probably understated. Machine tool manufacturers reported a 1972 value of controls shipped as part of numerically controlled machine tools of \$42.3 million. This figure is published in Current Industrial Report series MQ-35W, "Metalworking Machinery."

<sup>7</sup>Data for product code 36293 25 are included with code 36293 98 to avoid disclosing figures for individual companies.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)	
	1972	1967		1972	1967
RECTIFYING APPARATUS (36292)			OTHER ELECTRICAL EQUIPMENT FOR INDUSTRIAL USE (36293)

West Region.....	12.5	7.9	Virginia.....	CC	( <sup>1</sup> )
Pacific Division.....	EE	( <sup>1</sup> )	West Virginia.....	1.8	( <sup>1</sup> )
California.....	11.1	( <sup>1</sup> )	West Region.....	13.4	16.9
			Pacific Division.....	13.4	( <sup>1</sup> )
			California.....	EE	12.9

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9

BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9

EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9

GG.....\$50.0 and over

(NA) Not available.

<sup>1</sup>This State or division was not shown as a separate line in table 6B in the 1967 report for this industry.<sup>2</sup>As this product class is new for 1972, geographic data for 1967 are not available.

<sup>3</sup>The individual product codes included in this class of products for 1972 differ significantly from the 1967 definition. Products shifting into or out of this class of products represent more than 15 percent of the total shipments at the U.S. level. Thus, geographic information for 1967 are not shown.

<sup>4</sup>Data for product class 36219 were not published in 1967.

TABLE 6C. Product Classes—Value Shipped by All Manufacturing Establishments:  
1958, 1963, 1967 to 1972

(In millions of dollars)

<sup>1</sup>These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

<sup>2</sup>In 1966 and previous years, product-class code 36136, "Duct, including plug-in units and accessories, 750 volts and under," and 36137, "Relays, control circuit," were included with product-class code 36131, "Switchgear, except ducts and relays."

<sup>3</sup>In 1966 and previous years, product-class code 36135, "Molded case circuit breakers, 750 volts and under," was included with product-class code 36132, "Power circuit breakers, all voltages."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.  
(Z) Less than half of the unit of measurement shown.

<sup>1</sup>This item represents the total cost of materials for establishments that did not report detailed materials data.

<sup>2</sup>Excludes quantities produced and consumed in the same establishments.

<sup>3</sup>Includes cost of materials for which symbol (D) appears.

<sup>4</sup>Data for material code 335102 are combined with code 335152 to avoid disclosing figures for individual companies.

7B	Fuels and Electric Energy Consumed: 1971 and 1967 . . . . .	33

# EXPLANATORY TEXT

## HOUSEHOLD APPLIANCES

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

### SIC Code and Title

- 3631—Household Cooking Equipment
- 3632—Household Refrigerators and Home and Farm Freezers\*
- 3633—Household Laundry Equipment
- 3634—Electric Housewares and Fans
- 3635—Household Vacuum Cleaners
- 3636—Sewing Machines
- 3639—Household Appliances, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## INDUSTRY 3631.—HOUSEHOLD COOKING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing household cooking equipment, such as stoves, ranges, and ovens. Establishments primarily engaged in manufacturing household cooking appliances, such as hot plates, grills, percolators, and toasters are classified in industry 3634. Establishments primarily engaged in manufacturing commercial cooking equipment are classified in industry 3589. For a detailed list of products of industry 3631, Household Cooking

Equipment, refer to table 6A, product codes 36311 11 to 36312 98.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number or content from the previous classification.

Value of shipments and other receipts of the Household Cooking Equipment Industry in 1972 totaled \$925 million. This included shipments of household cooking equipment (primary products) valued at \$764 million, shipments of other products (secondary products) valued at \$78 million, and miscellaneous receipts (mainly resales) of \$83 million.

Shipments of household cooking equipment (primary products) in 1972 represented 91 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 92 percent.

Shipments of household cooking equipment (primary products) from establishments classified in industry 3631 in 1972 represented 74 percent (coverage ratio) of these products valued at \$1,027 million shipped by all industries. In 1967, the coverage ratio was 76 percent. Other industries shipping household cooking equipment consisted mainly of industry 3585, Refrigeration and Heating Equipment (\$92 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3631, these establishments accounted for less than 1 percent of value of shipments.

## INDUSTRY 3632.—HOUSEHOLD REFRIGERATORS AND FREEZERS (Short Title)

This industry comprises establishments primarily engaged in manufacturing household refrigerators and home and farm freezers.

Establishments primarily engaged in manufacturing commercial and industrial refrigeration equipment, packaged room coolers, and all refrigeration compressor and condenser units are classified in industry 3585, and room dehumidifiers are

\*Note that the "short title" for this industry is used throughout the report.

classified in industry 3634. For a detailed list of products of industry 3632, Household Refrigerators and Freezers, refer to table 6A, product codes 36321 07 to 36322 47.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3632, these establishments accounted for less than 1 percent of value of shipments.

#### INDUSTRY 3633.—HOUSEHOLD LAUNDRY EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing washing machines, wringers, dryers, and ironers for household use as well as coin-operated washers and dryers.

Establishments primarily engaged in manufacturing commercial laundry equipment are classified in industry 3582. For a detailed list of products of industry 3633, Household Laundry Equipment, refer to table 6A, product codes 36331 31 to 36333 95.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been slightly changed from the previous classification system. (Small coin-operated washers and dryers and parts were added to the industry.)

Value of shipments and other receipts of the Household Laundry Equipment Industry in 1972 totaled \$1,356 million. This included shipments of household laundry equipment (primary products) valued at \$1,169 million, shipments of other products (secondary products) valued at \$166 million, and miscellaneous receipts (mainly resales) of \$22 million.

Shipments of household laundry equipment (primary products) in 1972 represented 88 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent.

Shipments of household laundry equipment (primary products) from establishments classified in industry 3633 in 1972 represented 91 percent (coverage ratio) of these products valued at \$1,290 million shipped by all industries. In 1967, the coverage ratio was 90 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3633, these establishments accounted for less than 1 percent of value of shipments.

#### INDUSTRY 3634.—ELECTRIC HOUSEWARES AND FANS

This industry comprises establishments primarily engaged in manufacturing electric housewares for heating, cooking, and other purposes; and electric fans including ventilating and exhaust household-type fans. Important products in this industry include electric air heaters, electrically heated bed coverings, blenders, broilers, deep fat fryers, flat irons, food mixers, hot plates, percolators and coffeemakers, roasters, toasters, desk and bracket fans, hassock and floor fans, window-type propeller fans, rollabout fans, and household and kitchen ventilating and exhaust fans.

Establishments primarily engaged in manufacturing industrial and commercial blowers, industrial and commercial exhaust and ventilating fans, and attic fans are classified in industry 3564. For a detailed list of products of industry 3634, refer to table 6A, product codes 36341 37 to 36344 31.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Electric Housewares and Fans Industry in 1972 totaled \$1,613 million. This included shipments of electric housewares and fans (primary products) valued at \$1,318 million, shipments of other products (secondary products) valued at \$174 million, and miscellaneous receipts (mainly resales) of \$121 million.

Shipments of electric housewares and fans (primary products) in 1972 represented 88 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 90 percent.

Shipments of electric housewares and fans (primary products) from establishments classified in industry 3634 in 1972 represented 91 percent (coverage ratio) of these products valued at \$1,448 million shipped by all industries. In 1967, the coverage ratio was 86 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3634, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3635.—HOUSEHOLD VACUUM CLEANERS**

This industry comprises establishments primarily engaged in manufacturing vacuum cleaners for household use.

Establishments primarily engaged in manufacturing vacuum cleaners for industrial use are classified in industry 3589, and installation of built-in vacuum cleaner systems in industry 1796. For a detailed list of products of industry 3635, Household Vacuum Cleaners, refer to table 6A, product codes 36350 11 to 36350 71.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Household Vacuum Cleaner Industry in 1972 totaled \$468 million. This included shipments of household vacuum cleaners (primary products) valued at \$372 million, shipments of other products (secondary products) valued at \$91 million, and miscellaneous receipts (mainly resales) of \$5 million.

Shipments of household vacuum cleaners (primary products) in 1972 represented 80 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 75 percent.

Shipments of household vacuum cleaners (primary products) from establishments classified in industry 3635 in 1972 represented 85 percent (coverage ratio) of these products valued at \$439 million shipped by all industries. In 1967, the coverage ratio was 84 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail

portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3635, these establishments accounted for less than 1 percent of value of shipments.

#### **INDUSTRY 3636.—SEWING MACHINES**

This industry comprises establishments primarily engaged in manufacturing sewing machines for domestic and industrial use. For a detailed list of products of industry 3636, Sewing Machines, refer to table 6A, product codes 36360 21 to 36360 81.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Sewing Machines Industry in 1972 totaled \$160 million.

Shipments of sewing machines (primary products) from establishments classified in industry 3636 in 1972 represented 93 percent (coverage ratio) of these products valued at \$152 million shipped by all industries. In 1967, the coverage ratio was 96 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3636, these establishments accounted for 1.9 percent of value of shipments.

#### **INDUSTRY 3639.—HOUSEHOLD APPLIANCES, N.E.C.**

This industry comprises establishments primarily engaged in manufacturing household appliances, not elsewhere classified, such as hot water heaters, dishwashers, and food-waste disposal units. For a detailed list of products of industry 3639, Household Appliances, N.E.C., refer to table 6A, product codes 36391 11 to 36399 91.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Household Appliances, N.E.C., Industry in 1972 totaled \$682 million. This included shipments of household appliances, n.e.c., (primary products) valued at \$620 million, shipments of other products (secondary products) valued at \$46 million, and miscellaneous receipts (mainly resales) of \$16 million.

Shipments of household appliances, n.e.c., (primary products) in 1972 represented 93 percent (specialization ratio) of

the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent.

Shipments of household appliances, n.e.c., (primary products) from establishments classified in industry 3639 in 1972 represented 76 percent (coverage ratio) of these products valued at \$816 million shipped by all industries. In 1967, the coverage ratio was 79 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3639, these establishments accounted for less than 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 3631	Industry 3632	Industry 3633	Industry 3634	Industry 3635	Industry 3636	Industry 3639
1972.....	72	30	20	247	34	72	70
1967.....	66	31	25	248	34	83	71
1963.....	77	31	33	286	34	83	102

(NA) Not available. (S) Withheld because the data did not meet publication standards. \*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee  (dollars)	Assets per employee  (dollars)	Production worker as percent of total employment (percent)	Annual men-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

See footnotes at end of table.

(See appendix. Explanation of Terms)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent	E3--30 to 39 percent	E5--50 to 59 percent	E7--70 to 79 percent	E9--90 to 99 percent
E2--20 to 29 percent	E4--40 to 49 percent	E6--60 to 69 percent	E8--80 to 89 percent	E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees    RR--250 to 499 employees    CC--500 to 999 employees    EE--1,000 to 2,499 employees    FF--2,500 employees and over

(See appendix, Explanation of Terms)

See footnotes at end of table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; a.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Household cooking equipment (SIC 3631)	Household refrigerators and freezers (SIC 3632)	Household laundry equipment (SIC 3633)	Electric housewares and fans (SIC 3634)	Household vacuum cleaners (SIC 3635)	Sewing machines (SIC 3636)	Household appliances, n.e.c. (SIC 3639)	Other industries
	Total shipments and miscel- laneous receipts.....	(X)	924.7	1,719.7	1,356.5	1,613.3	467.7	159.6	681.9	(X)
